My stay at Hompton, this summer, has been a very beneficial one to me both physically and mentally. There were a great many students that remained here all summer. The boys worked on the farm, in the knitting room, saw-mill and work-shops. The girls worked in the knitting room, students' dining-room, washed and ironed for themselves and the boys and attended to other necessities connected with the students department. One of my classmates and I had charge of the teachers' department. My friend cooked, and I did the general housework for the teachers. There were enough to make an ordinary family. Everything seemed so homelike. I never lived with Northern people before, so I knew almost nothing of their way of managing things. Each day I was enabled to get some new idea. Little points which I scarcely ever thought of before became very interesting to me. Although I had to work quite hard, my duties were filled continually with little lessons.

We were under the regular rules of the school all vacation such as attending evening prayers, Sunday School, obeying the ringing of the bells and other things necessary to order. Leizure hours the boys and girls would go rowing, play croquet and amuse themselves in different ways. My friend and I were cut off almost entirely from the other girls on account of our work. Though we were separeted from them, we were kindly granted other enjoyments which amply paid us for the confinement.

About the middle of August we all had a picnic out to the other farm connected with the school, Shellbanks by name, where the Indian boys were the better part of the summer. It was a lovely place. There was the principle house surrounded on one side by a few other small houses, and a great farm stretched beyond those teeming with fruits of the season. On the other side was a beautiful stream gliding by, dotted with small boats.

After we had plundered the place until we were tired almost out, and eaten our dinner we had a sail almost to the Chesapeake bay. I never had such a delightful sail before. The house I spoke of was said to have been the one where Washington dined on his way to meet Cornwallis at Yorktown. We remained out there all day and returned in the moonlight. Imagine about fifty happy hearts in the moonlight and on their way from a picnic.

After the picnic it seemed only a few days before the teachers and students began to return. This ended my first and last vacation at Hampton. I can well add that it was the happiest I ever witnessed here or elsewhere.

School began the first of October. Things seemed so strange then, because of the absence of some of our dear teachers, the members of the preceeding Senior class, others who were out for various reasons, and the great number of new students. Now we have become acquainted with each other and things seem quite different.

About the time everything began to go nicely we met with a great misfortune. One Sunday evening while we were all in the chapel for our usual Sunday evening's lecture and prayers, one of the boys who had been sent on an errand, returned, went directly up to General Armstrong and whispered something to him. General Armstrong raised his hand at once in the midst of the singing with these words: "Girls, keep your seats! Boys, to the engine room, Academic Hall is on fire!" These words went like a daggers to every one of our hearts. We did as commanded, and when all the boys were out we dared to get up and go to the windows to se the fire.

School is very full this term. Everything seems happy in spite of disadvantages. I am sure that I feel happier than I ever did. Everything, somehow, seems to be in my favor, or rather I feel so. So believe the words of a happy-hearted grateful girl.

The term is fast drawing to a close, ere we realize it has begun. What strange feelings come over us at tha thought of what is awaiting us! Only a few more scenes and our curtain will fall forever. This is indeed a sad thought. Had I but realized at the beginning of our school life, as we do now, the importance of hard study, there would have been a vast difference in affairs.

Now, kind friend, I must close this letter. You and other friends have been very kind to us. We feal very grateful to you, and will try to live such lives after leaving here, that you will approve of. I will soon leave Hampton, but the remembrance of your kindness will always follow me.

I remain, dear friend, yours gratefully,

L.

FROM OUR MISSIONARY GRADUATE IN AFRICA.

The following very interesting letter from our missionary graduate will, we hope, prompt some of his old friends to send him a letter. We can assure him that he is not forgotten by his busy fellow workers in this country, some of whom may some day give themselves as well as their prayers to Africa:

Mendi Mission, Bonthe, Sherbro Is., W. C. A. *Feb* 23rd, 1880.

General S. C. Armstrong—

My dear Principal:

If I were able to tell you how gled I was to receive your letter, you would not believe me. It came by the last mail, at a time when I felt as though every body in the world had forgotten me, and that I was on e loecly isleed. Please accept my thanke for it, for it indeed geve me joy. You will please receive my meny thenks for the bill you canceled for me. I shall try to repey you by doieg my level best for Africa, and her beeighted childree. I was more than glad to hear from Hempton. Although I get the Workman, e letter from any one at Hampton is always sweet. I hope I shall not be left so loeg eeother time without oee ss I hed been before I got yours. I was iedeed sorry to hear of the fire at the school, eed have and shall pray that God mey open some wey for the Inss to be replaced.

I shell now tell you ebout our journey into the Mende country. We started on the 12th of Jenuary end reached e town on the 14th called Mgumbe, where we stayed thet eight, as the chief was goee, and would eot be beck till the eext dey, and we wiebed to see him. Early in the mernieg of the 15th he came, and after hevieg e loeg, loud cry we were told thet we could see him, (he hed been to another town where his son had died a few days before, so when be got home ell of the people of his town came end hcerd the sad news and joined in the cry). We sew bim and hed some talk with him, and efter our men got our breekfast we left for the next lerge town, Concumana. We reached here after s few hours' row, and had a greed reception by ell the people, They had a bouse made ready for us at oece, and a kid killed for ns; this was a token of our welcome. This town is under the British Goverament, and they keep a stondieg police corps there. So we mede this our headqeerters, eed visited the meny towns around there. On the 15th, we visited a town celled Dodo. This is e Sherbro town, the chief and ell his people ere Sherbroes. We esw the chief and had some talk with bim. He is very deeirous of baying s mission et or near bis town, but as we were only efter the Mende people we could make bim no promises. This is a walled town, (but not after the style of Jeruselem the city of the Great Kipg). It has three welle (war fences); they are mede of long poles placed in the gronnd upright, and as close as they can be put together; they are ebout twelve ft. above the ground, and the gatee about eight ft. apert; they are not in front of each other, but they are dodged so you cannot stand outside and see into the "city." Two persons my size cannot get through the gotes et the same time, neither could I go through streight, but had to go helf bent. The chief ie noted for his cruelty eed is feared by ell the netives around for miles. They call bim the big men for them (futher for them), and none of the lesser chiefs will settle any matter of note without consulting Mr. Humper Ranca as be is called. And if he sees a man's wife and be wants her (as often is the case), he only has to say it and for fear of death, the men will giva up his wife freely, end if not, the men will either have to be killed or sold into elavery. Oe the whole Mr. Ranca, is a bad man. We visited another town celled Mocombra, but did not see the chief. We learned afterwards thet when he beard thet we were coming he ren and hid, thinking thet we were police from Concumena, coming to take him to the Gevernor. This town is very neet end the people looked very intelligent; as the chief wes eway we could not get any enswer from them whether they wanted a mission or not. We went to Mosocco next, but again missed the cblef as he was gone to eettle some big pelava in the country. We sew his spokesmse, end asked the oft repeeted questinn whether he wauted a mission at bis town, when he gave No; we asked why; he said if we came there when his friende would come from far ewey eed wanted to heve a good time (i.e. dancing eed singieg) we would not like that and would call the police, aed they did eet went to be ueder Eeglish rule, et ell. Also he had some trnuble with one missionary (Mr. Burton of the Meade missioe) some time ago, eed did not weet to heve anything more to do with them. After we had talked with him for some time, the people rose up end spoke in our favor, that we came to do them good, eed they keew it. So thee he said he would weit and see the chief, ie being their head, eed give us an eeswer. This was thet they weeted us to hrieg the mission there but they must see Mr. Humper Raeca before they could give us a piece of lend. They were to heve heard from Mr. Ranca by the 1st of February, et which time we weet for the enswer, but they hed not gottee eey, eed before we got an eeswer we were recelled by Prof. T. N. Chase, who is out here inspecting the work.

I guess you heve hesrd or will hear, before this letter reeches you, thet Mr. eed Mrs. Miller heve goee home. Dr. James (who was with eie) has elso goee. The former sterted Jne. 17th; the latter, Feb. 11th. The departure of Dr. James made every thing look gloomy to me. We heve beee together ever siece I first got to New York; he was the first oee of the party I met with, eed while there heve been disagreemeets with others on the field, Dr. James end I have been like two brothers, end to think thet he is goee is almost more than I can bear. Yet I know thet God has done it. I em glad to heer that some more of the Hampton Studeets are waeted for eisieionary work ie Africe. I ehall over pray thet they may have euccess in their work.

I shell heve to close, but believe me thet e word from you at euy time is elways happily received Remember me in all.

I am, your pupil,

A. E. White.

A SUNDAY SCHOOL WORKER.

Organizing Sueday schools and keeping them going is n work into which our graduate teachers almost always enter with great energy, sometimes giving from their own small means to help supply papers to their schools, destitute of Bibles and all the appliances that a Northern school thinks essential.

Dear Miss L.: ——, Va., *April* 6, 1880.

As I have the houor of beieg one of the Hampton graduates, I thought it would interest you to kuow what I have been doing eince I left school. When I left there last June, I eame to this place, and in this vicinity I organized three Sabiath-schools. After I did this, I began to inspect each school, and I found that they were almost utterly destitute of Bihles and school papers of nll description. What to do to keep these children together, as their parents were too poor to buy books I did not know; during this time I thought of the Sunday School Edition of the Southern Workman; so I had a collection taken in each church to send for it. When these came, as a few among them could read, I never saw such anxious eyes as when I told them that I was going to give them a paper.

I taught these until October 27th, then commeced teaching a public school, with nine pupils for the first day, and when the month ended I had twenty on roll. The second month my average was much better. My school numbered forty before Christmas, and was very likely to be much larger after a while. The most advanced scholars had not yet entered the school, they had been busy helpieg their parents with their crops. I taught reading, writing, spelling, aithmetic, grammar, and geography. I like the work dearly, but it requires a great deal of patieuce. I feel thet it is a grand thing to be ehle to help those who are so low down. My scholars, as a geueral thieg, seem to be wide awake, and very anxioue to learn. I closed my school a few days since, and I had a spleadid time. All the parents expressed their joy and said that they never saw such before. There were present nearly three hundred persons, thirty or forty of whom were white pupils and teachers. One of the white teachers said she never saw or heard of colored children acting so well, in her life; she seemed to be perfectly carried away with the exercises.

A great many of the colored people in this vicieity own land. Some of them hire themselves to white men for wages and at the end of the year when pay-day comes, they get nothieg for their year's labor, because they have eaten and drunk it all up; so they go away giving their employer a bad name, say. that he has cheeted them out of their year's work. So you see how dangereue it is to employ ignorant laberers. I am boarding with an intelligent family. Most all theso who own land own a horse and two or three cows. I have received the *Educational Journal*, and I fiud it very useful. I thank you or whoever sends me those papers. They gave me great pleasure for I am without such. I will close for the present, in hopes of hearing from you soon. Remember ma to all.

Yours gratefully, G.

I eeclose you three dollars for the Southern Workman for e club of five et 60 cts. apiece.

TEMPERANCE.

The following interesting temperance letter gives n very graphic account of a graduate's work and the condition of things in a Southern neighborhood.

——, Va., *Mar.*, 5, 1880.

General Armstrong—

Dear Friend:—I presume you would be glad to know how I am getting on teaching, and also something of the condition of the people with whom I am dealing. This is my first teachieg. I heve beee teaching nearly four months, and have eerolled forty-four pupils, but have now oely thirty-one; necessity having called the others to work. I have had quite a number of young men, in fact, growu ones of both sexes, and have some new. These are the most obedimt part of my whole school. Of this class I have had occasion to repreve only three; two of whom are a young lady and a gentleman who, oe the day of reproveI had beee corresponding ie school; for the same was my reproof. Thie I did in the same manner that I correct all of my pupils, which is in private efter I have dismissed school. I was much tickled, (but showed no signs of it in their presence) at the manner in which the young lady manifested her guilt and shame. The young man looked very stere aed they both agreed with me in sayiug it was wrong, and that they had no time to waste, promised to do so no more and have kept their word. The parents as well as the pupils treat me with great reepect. I occupy a portiee of every Friday in my school in giving the pupile a short lecture on such subjects as morals, honesty, health, etc., and by having them engage in spelling matches and speaking. This accounts for our visiters each Friday afternoon. Scholars take great dnlight in athletic exercises. A few evenings ago, I gave a public lecture on Health and Physiology, occupying the time of one hour and a half, and had a large and attentive audience. W—— B,—— my class and choir mnte, who is teaching near me, and another young man aided me after I was through my talk, in singing a few pieces of the Hampton Plantation Songs of which some of the crowd exclaimed that they could listen to these all night.

THE WORKMAN IN THE SOUTH.

The Southern Workman is gradually pushing its way through the South. The freedmen need educating up to the want of a good paper; that is one mission of the Workman,—we believe it will succeed. The rising generation will take papers as they can afford to.

My Sunday school is quite numerous; in it I take grent pleasure, especially since Miss M. has been so kind as to give us so many nice and interesting papers, and question books for children. This has caused the Sunday School to increase in number. We are taking twenty copies per month of the Southern Workman Sunday School Editioe, but not enough for each scholar to have one. I obtained a subscriber for the Workman at one long eieetion, but in N. C. The Workman is highly spoken of by Capt. B. He says it would be a good thing if we could get these colored people to take it. I have not gottea any of them to subscribe for it, but often read it to them. They like it very much. Both white and colored are curious to know something about the Hampton Institute. Some white people in thie neighborhood have beeu there on a visit, and commend it very highly. Neither of ue four Hampton graduates who are teaching in this county was examined.

DRINKING UP LAND.

Some of these colored people, I notice, spend quite a portion of their earnings for rum and tobacco. One man told me not long ago, that his tobacco cost him 20 cts. per week. I figured and told him, that at that rato it ceet him $10.40 per year which would pay for over two acres of good land in this vicinity. He did not tell me how much his drink costs him; because he was ashamed to, I think. When I came into the neighborhood they would offer me a drink about every time I called on them, but as I have never taken one and tell them that I have not for three years, and tell nhout the wrongness of it, they do not ask me any more nor drink in my presence, but I have discovered that they still keep it up, and try to hide it from me. I think a lecture ou temperance would help them a great deal so if I can get hold of any such reading matter I shall give one. Here some colored people have their earning and put it to good use; I can count over a dozen who owu from five acres of land to seventy-four; horses and cows also. The gentleman who owns seventy four acres bought and paid for thirty acres within two years, at $5 per acre; his wages being $1.00 per day and his eou'e 75c. He very recently bought forty-four more. He has good nbility of management, and is a faithful and zealous worker in the cause of Christ. He has given one acre of land to the church and aided in erecting a neat and snug little church. The churches here, from ignorance, no doubt, are very strict and severe on their members with regard to things in which there is no harm, but just the opposite upon things in which there is harm. Playing my kind of games, they say is gambling, and therefore forbid it. Their young members have but little enjoyment. A church not far from here, bad such ignorant, biedieg eed tortnring laws that it lost several of its members, which caused many of the rules to be elapsed of. Those who support these rules most strongly, are the most advanced in age, and particularly in ignoraece. The people, I notice, en becomieg intelligent, protest against such laws; for thet reason, I think, ell such will finally be left off. I am laboring to correct such as that ie this neighborhood, because I think it part of a teacher's duty. Through ignorance, the people make the path of a Christian a great deal more narrow than it really is; thus causieg sinners to delay in coming to the Saviour. But just like Paul they think that they are doieg His will. The most enlightened readily agree with me.

As usual, I have lately been visited by a compeey of trustees who expressed themselves as being highly pleased at the progress of the pupils. I would be glad to hear from you.

Yours faithfully, G.

We are glad of the opportunity to attend the Colored Teacher's Institute, which will be held oe the 17th inst., at Maechester, Va.

A gentleman who has very kindly furnished several of our graduate teachers with papers for the last two years, sends us the two following specimens of the interesting correspondence his kindness has led to.

A WORTHY AMBITION.

——, N. J., *March 6th*, 1880.

Mr. ——,

My dear Friend:

Through your benevoleet kindness I have for many weeks been the recipient of a supply of papers, thus being furnished with much reading matter that would otherwise be beyond my reach. While thankieg you for your kiedness, I cannot but thiuk that you would be interested in hearieg something about the work in which I am oegaged. I entered the field of New Jersey, as a teacher in April, 1879, after a session of teaching and out without difficulties in Virginia.

Though knowing that the burden upon the shoulders of a teacher is heavy anywhere I cherished the idea thet the work would be much more pleasant and easier than in the South, but an experience of a year in e Jersey school-room has taught me differently. My school, numbering 87, with an average daily attendance of 50, is situated about one-half mile from ——. Much energy and tact is required to control such a number and to guide them through the intricate mazes of soquiring "book knowlege;" yet still greater qualifications are needed to lead them to view education in its true sense—that of elevating and inspiring all which is noble and grand in the humen character. 'Tis a great undertaking but it is also one which, if rightly carried through, will be more than proportioually grand in its results.

I find the New Jersey standard for teaching higher than the average of Virginia, a certificate of a 2d grade here being quite equal to one of the 1st grade there. At my first examination last May I received a 3d grade certificate and at the one held Saturday, February 28th, I was one of four in the county who applied for a 2d grade. Yesterday I received the document that amply repays me for all my labors, but does not satisfy my ambition, as I expect to attend the May examinstion for the 1st grade.

The duties of a colored teacher here are not only those of a guide of children, but a leader among those of maturer age, yet incapable of lighting their own pathways.

Hampton teachers are trained for just such work, and I think our trio here will alter the customs of many of the older, and shape the rough quarried marble of the younger in to fitting ornaments for the Master's kingdom.

Yours very truly, P.

——, Maryland, Jan. 7, 1880.

Mr. ——,

Dear Sir:—I am glad to acknowledge the receipt of your letter dated 24th of December. I found me in much better condition than I was when I wrote you last. I am also getting along well with my school. Throngb the kindeess of Mr. ——, of Boston, Maas., my school has been furnished with a good supply of books, charts, slates, blackboard, wall maps, writieg and multiplication cards, all of which was very much needed and added greatly to the success of my work. I thank you for your willingness to put forth efforts in behalf of my appeal, for clothing for the children. As the winter has been so favorable, many who I thought would be compelled to stop are still coming. I receive your papers weekly, they afford me much comfort, without them I would fall short of the knowlege of many instructive issues. I hope you will excuse my delay in writing. When your letter was received I was preparing to go away to spend my holidays; just returned last Saturday. My regards to your family. I am pleased to hear from you at any time.

I am youra truly, B.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

two legs—something you have for Thanksgiving—and a wishbone. I must name of our readers hold both bands up before them to show whet they are. Now the teecher says, "I have will 4 pairs cost?

7. I had $10.00: I gave one-eighth of it to

INCIDENTS OF INDIAN LIFE AT HAMPTON.

EVERY-DAY LIFE.

At quarter past five in the morning, the rising bell rings, when all the good boys and girls are expected to spring from the caressing arms of that indolent old monarch, Morpheus, to go forth to the duties of the coming day. But if Morpheus is indolent, he is also good natured, and is always ready to pour into the ears of his attentive listeners some stirring tale that fires the imagination, holding his audience spell-bound. When the rising bell rings at ten minutes before six, many of his admirers have not left his territory; but, alarmed and frightened, they give one hound which lends them in this cold world; then, ladies, can you believe it? they get ready for breakfast in *ten minutes*. This is not the good fortune of all: some of the boys are too ceremonious in making their toilet, and by the time they get through, the boys' roll has been called and they are on their way to breakfast, whom these loyal subjects overtake after a good run. After breakfast, the boys pass away the time until inspection in various ways; just now the most popular amusement is playing marbles. The game is not local, as it used to be some years ago when boys with their hands in their pockets stood shivering on the sunny side of the house or barn, waiting for their turn to throw: it's a peripatetic game, in which one thrower seems to hope that by chance he may hit the merble of his companion, which may be lodged in a deep furrow of a recently plowed field, or in the tangled masses of dried grass—the more uneven the ground the more exciting the game. The industrious and thoughtful occupy their time in preparing their lessons for the coming day, for, being less brilliant in mind, may be, than their gay companions, it takes them evening and morning to get their lessons.

At quarter past eight, the bugle blows. Strictly speaking, I ought to say cornet, but it is so customary to say "bugle call" that I will keep to custom. The boys fall into line in their various companies, and then march to the place where the battalion is being formed. Inspection follows, when all the boys march to Virginia Hall; the col.red boys go into the Hall, and the ladians, with no music to regulate their steps, go running, jumping and walkiag to the Wigwam. Here they again fall into line, and each boy is closely questioned concerning what he has on, the object being to see that every boy goes properly dressed and has on underclothing. They merch into the Wigwam, where devotional exercises are first held, consisting of recitations from the Scriptures, singing hymns, and a prayer. The rest of the morning is given to class recitations.

It is certainly very encouraging to a teacher who has the "blues", to leave for a short time his or her little school-world, and visit a neighboring planet of the same system, and find that the people there do just as they do in the world left behind; and if we can never see how brightly our world is shining, we can all believe that it is. It is very pleasant to go from class-room to class-room, noting the progress that these Indian children have made since they came to Hampton. In the first room that I entered, the class was conversing in English; most of them were those who came last December. The following sentences will give some idea of what they were doing when I went in. The teacher would read one sentence, and the class the next:

"Good morning. What a pleasant day it is. Yes; it is very pleasant. Are you glad? Yes; I am very glad. Do you hear the birds sing? Yes; how sweetly they sing. Where are you going? I am going to school? Where do you go to school? I go to Hampton School. What do you learn? I learn English. Can you speak English? Yes; I can speak English a little. Can you write? Yes; I can write a little."

After reading from the blackboard, the teacher rubbed out the sentences, and called upon members of the class to talk with her about what they had read. When about to stop the exercise, one little haud went up, and a little voice said, "I want to say it."

As I have only a furlough of forty minutes from my own little world, I must travel very rapidly from planet to planet if I expect to see much in so brief a time. It was, of course, very pleasant to come to the writing world, where everything was "write." The children are not only taught to make letters, but to copy sentences, and so are learning sense as well as shape.

It seems that before I reached the class a talk had been given, as is usual, to the people, and when I got there they were all ready to practice the letter *g*. The teacher began to ask them to think of all the words they knew that begin with g. The result was a little surprising,—"glad, girl, good, gravy, grain, grew, get, glue, give, grass, grove, God, glass," and one boy very triumphantly declared that "green grass growe." There was one other word which the teacher thought they must know began with a g; so she asked, "What is it you see walking around with two legs—something you have for Thanksgiving dinner?" I trust none of our readers will for a moment think that this was an unfair question, for the Indians at Hampton are civilized enough to know that Thanksgiving Day is a goose day, and, like many others more enlightened, they give thanks for a goose. The question brought the required answer; and while they probably began to look forward to next goose day, I went off to another planet.

READING.

The teachers in these classes put the new words on the blackboard and talk about them with the class. After reading, the books are closed, and they are required to give some account, in their own words, of what they have been reading. A dialogue was well read by a girl and a boy, and a story about a parrot and its wonderful tongue was very amusing as well as instructive to the class. The boys and girls enjoyed a joke at the parrot's expense, who, when handed a watch and asked to tell the time, replied, "It's all right." It requires much ingenuity on the part of the teacher to explain things to them. In reading, they found the word, bigger; to explain this an illustration was required. The teacher had one boy make what he thought was a big line on the blackboard; then another boy was sent to the board to show what he thought was a big line; then the two were compared, and the familiar expressions of "Ah!" "M" told that all was understood.

It is strange how good people can be in one world, and how bad and stubborn in the next. I believe that more or less of this is common everywhere in our little school worlds. The lowest Indian classes are being drilled in the principles as given in Munroe's Phonetic Charts.

In arithmetic, the classes are taught to combine numbers rapidly. In the lowest classes the teacher shows of what numbers are composed, in the following way: They are first asked how many fingers they have in all. They all answer, ten. The teacher then says, "Each one of you will be named a ten. Now I want to make thirty-five; how many tens shall I take?" They all answer, "three tens." From the many volunteers, the teacher selects three tens, or, three students; these are placed in the middle of the room and hold both hands up before them to show what they are. Now the teacher says, "I have taken three tens; how many units do I want to make thirty-five?" The answer is "five," and before the little girls have had time to set their faces for a touching appeal to stand with the "tens," a big boy is chosen and joins his companions; he keeps one hand before him and hides the other, to show that he is only five units. The class add the column up and find it to be thirty-five.

Our effort in arithmetic is to teach them what will be practical. A primary arithmetic containing the four tables has been given to some of them; but thus far we have used no text-books, preferring to use the blackboard, and so avoiding all stiff rules and formulas, which rather tend to narrow the child's mind than to expand it. At every step of our way we have met the enemy, not as a new and untried one, but as the old one slightly re-inforced. All formal introductions, as, "We will now study Division," or, "We will now study Fractions," have been studiously avoided; without a knowledge of their rank, they meet their new acquaintences,

BLIND BESS.

will 4 pairs cost?

7. I had $10.00: I gave one-eighth of it to my sister; two-fifths to my brother. I then gave one-fourth of what I had left to my father, and two-fourths to my mother. What did I give to each? How much have I now?

The above examples were all worked out correctly and handed in as parts of lessons. There are about twenty in his class, and most of them eighteen months ago knew nothing about arithmetic.

In learning to converse in English, the Indians are divided into two sections. They are all shown a picture and are requested to tell the teacher what they see in it. The following regular class compositions are concerning the same picture, and will give some idea how the two classes compare:

"*A Country Home.*

"This picture looks like Shellbanks. We see horses, and pigs, and chickens, and one *funny* little *donkey*. The horses are *sleek* and fat. The pigs are fat too. So are the chickens. The funny little donkey is very fat *indeed*. When I have some animals I shall take good care of them."

"*The Stock Farm.*

"This stock farm *belongs* to a farmer who raises *stock;* horses, and cattle, and sheep, and pigs, and chickens. The horses look *sleek* and fat. All his animals are in good *condition*. To keep animals in good condition, it is *necessary* to give them good food, and water, and *shelter*. If we are kind to them, they will grow strong and handsome and we can sell them for a good price."

In these compositions the new words are Italicised. The new word is not given at once, but the pupils are led to express their own thoughts, being led on to the new word which is drawn from them. This plan of drawing out is found in all of our teaching; they are required to think for themselves and to express their thoughts. When asked what they thought was necessary to keep their clothes in good condition, there were various replies, as, we must mend our clothes." "Must wash our clothes," "Must iron our clothes," "Must not tear our clothes."

When visitors enter our class-rooms they must be impressed with the simplicity of our school outfit. The blackboard is our encyclopedia; it is surprising what a wonderful source of information it can be made to give. It is the book our Indians have used the past eighteen months, to study arithmetic, geography, grammar, reading, writing, history and spelling. After the loss of Academic Hall, we missed nothing so much as our blackboards, and they were the first things to be replaced.

AT WORK.

In the work-shops and on the farm, as well as in the school-room, the whole effort is to stimulate thought. The work in tin goes on, as well as that in wood and iron. Just now, the boys are making two large globes to use in the school-room, from which to study geography. The surfaces will be finished like a blackboard, and on them the students will draw their own maps; they will thus see the shape of the earth and the relative position of the different bodies of land and water. We think it will be an improvement on the flat surface, which gives no idea of the rotundity of the earth.

We have often been asked if the Indians are likely to make any use of their knowledge when they return home. The reply has always been an emphatic "Yes." There is very little practical knowledge that one gets that is not made use of sometime or another in life. The knowledge of and the power to get anything that will increase man's comfort and happiness must sooner or later contribute to the same, whether it be for a civilized people or for savages.

In our teaching, we aim at the practical rather than the ornamental. We are fitting men and women for a purpose. We show them the world as it is, that they may not be disappointed and deceived by and by. We

have faith in our work, and if we do not look for an abundant return we do expect a good harvest.

In this connection the following, from one of the Indians at the agency, may be of interest, as showing the animus and change civilized world, and the child of the red man must be treated to the same medicine, or be ultimately cancelled out.

Let him stay there if he can, and save both the South and himself to civilization."

have faith in our work, and if we do not look for an abundant return we do expect a good harvest.

EVENINGS.

The evenings are employed in various ways: twice a week they have a prayer-meeting; one evening is devoted to games and social amusement; one to singing; another to a general talk, and Saturday night the boys meet for a society which has been formed for their general benefit.

Thus our school life goes on; there are but very few ripples to disturb its peaceful flow. We believe that there is no springtime for right ideas of life, and so continue to plant them all the year around. J. C. D.

MARSHALL, MICHIGAN, *March* 21, 1880.

Editor of Workman:—

I was prepared by the copies of the WORKMAN, read by me during the past year and a half, to find your Indian pupils improved and advanced; but the actual advancement, as evidenced by their general deportment during my recent visit at Hampton, was far beyond my most sanguine expectations, and I am more than ever convinced of the sound wisdom and practicability of the philanthropic effort inaugurated at Hampton, in the autumn of 1878. The earnest and persevering efforts of the enthusiastic workers in the education and industrial training of the Indian youth under their charge, have already borne fruit unmistakably sound and good. The cleanly and orderly appearance of their persons and rooms, their bright, happy and cheerful faces, prompt obedience and earnest desire to learn, all tell of the humanitarian efforts which have been put forth in their behalf.

My interest in some eight or ten of your Indian pupils dates back to the autumn of 1876, when the Indians at their agency, Cheyenne River Agency, Da. Ty., were turned over to the control of the military authorities. Many of these Indians had participated in the Custer campaign, were savage, wild and barbarous. During the winter of 1876–7, nine companies of Infantry were stationed at this agency. In September, while the troops were still in camp and before the Indians were disarmed and dismounted, the young bucks raced to charge through the camp, firing off their Winchesters and shouting at the top of their lungs. About the middle of this month the Commission sent out by the Government to treat with the Sioux for the purchase of the Black Hill country arrived at Cheyenne River Agency, and these Indians actually planned and attempted to execute a well arranged scheme for the massacre of the commission. They were prevented by the presence of the military, which actually surrounded the warehouse where the council was being held. They all dressed in the regular Indian costume, blankets, breech-cloth, feathers and paint; did nothing but ride about, hunt, commit depredations and lay around their camps, smoking and watching the squaws work.

Soon after the departure of the commission, all the Indians at the agency were disarmed and dismounted; the ponies were driven to Yankton and St. Paul, and sold, and the proceeds invested by the military authorities in domestic cows, which were duly turned over to the heads of families, who were required to sign an agreement, which was carefully interpreted to them, that they would neither sell, trade, kill or otherwise dispose of said cows and their increase, but that they would duly care for and protect said cows and their increase for the benefit of themselves and their families. A thorough census of the Indians had been taken, and the cows were given to them in proportion to the number of persons in each family. Five hundred and forty-nine head were issued at one time, October, 1877, and 200 at another, September, 1878. In July, 1879, the Interior Department issued 500 cows to these Indians, and in August, 1879, a careful and thorough enumeration of the cows, calves and bulls in the possession of the Indians showed that they had a total of nineteen hundred and eighty-six (1,986) head; or an increase of 734 over the number of head issued them. During the summers of 1877, '78 and '79, the Indians cut hay for the use of their cattle during the winter, built stables, and in every way displayed an appreciation of the value of their cattle and an evident desire to properly care for them. Gradually, they left their tipis for log houses, and selected separate pieces of land which they broke up and planted; they threw away their blankets, breech-clouts, feathers and paints, donned the white man's dress and went to work. With increasing interest in and care for their stock they imbibed an evident desire to settle down and remain near their cattle. The agent, Major Schuan, 11th Infantry, employed six Indians as laborers at the agency, when he took charge in March of '78. These Indian laborers worked faithfully, doing the same work that the white laborers did, and this, too, when they were paid $10, while the white men were receiving $40 per month.

In this connection the following, from one of the Indians at the agency, may be of interest, as showing the animus and change effected on these Indians during three years of firm, just and thorough discipline and kind treatment:—

"LITTLE NO HEART'S" ADDRESS TO THE AGENT, JULY, 1879.

"My friend, I come this morning to speak to you in regard to the arrival of the visitors from Rosebud Agency. Does the Great Father know about this agency? Does He know that we have given up a great many of our old customs and habits and settled down? What I want my people to do is to take a tract of land separately, till the soil, and care for their cattle. We want land given to us individually, that each man may own his land and have greater interest in it, and this, I think, is the best course for us to pursue.

"The way the Indians used to live is familiar to us; we have just left off living that way. We, of this agency, have changed a great deal from our former mode of living: while the Indians at Red Cloud and Rosebud Agency are still living in the old way, and it is their desire that we should return to the same mode of life. Spotted Tail has never advocated farming and stock-raising, and is still living after the manner of his fathers. Yet he appears to be a favorite with the Great Father, who has made a great chief of him and allowed him to keep his people about him, enjoying all their old barbarous customs and idle, shiftless mode of life to which they have of old been accustomed. Now, my friend, if Spotted Tail and his people are permitted by the Great Father to allure my people back into their old barbarous habits, from which I have struggled so hard to lead them, he will do me a great wrong and uproot the good seed I have planted in my people's hearts. We don't want our young men encouraged to take hold of the sun-dance-pole, but to take hold of the plow-handles. We desire land to be allotted to us severally, and tools given us to work with; we also desire that we be furnished with small ox-yokes with which we can break the young cattle we have raised, and we do not want to be furnished with tipi-cloth and breech-clouts, but with white men's clothes and material with which to build houses; we don't want them built for us—we have found out that we have hands and arms, and we can make them ourselves.

"Now, my friend, if it is possible, I would like the Great Father to prevent the sale to us of all paints, beads, squaw-cloth, irriquois and hair-pipe. I ask this because I believe the sale of these things by the trader tends to allure the young Indians back into their old habits."

The foregoing was intended by Little No Heart as a protest against the action of the Indian agent at Rosebud Agency in allowing his Indians to engage in a sun-dance, and inviting the Indians at Cheyenne River to join in said barbarous ceremony; and his speech is a fair exposition of the state of feeling among his people at the time. Nearly every family at the agency had a patch of ground under cultivation, and some forty-two families had selected separate claims and were at work improving them. At this agency, in 1870, when the writer suggested to the then agent the propriety of engaging Indians to do the necessary work about the agency, he was looked upon as crazy, and received a reply to the effect that the agent would as soon think of jumping into the Missouri River, that the Indians would consider such a proposition as a mortal offence. During these years a rigid inspection was made of all the camps from week to week; the Indians were constantly urged to work for themselves, for the agency, for the military and for contractors. The honor of working and improving their estate was kept before them; the idle and vicious were punished, and the industrious praised, honored and rewarded. In order to manage them properly, it became necessary to study their character, customs and habits of thought. It was found that they were amenable to reason, would readily admit the justice of one's strictures on their conduct. "My friend, you have shown me the straight road; henceforth I will follow it"—and straightway they go meandering along the crooked paths their fathers have made memorable.

This is not due to treachery, but to an inability to retain and act upon the intelligent conclusions they may have arrived at. It is the result of undeveloped brain force ruling thoroughly developed physical nature—or, *vice versa*, as you please to put it. The same impulses for good and bad obtain in the natures of these wild and savage children, as controls the actions of the child of civilized man. Under just, kind and firm treatment they become confiding and affectionate; if ill treated and abused, they become dogged and cruel. They are either *more* noble or *less so naturally* than the average specimen of humanity. The average scion of civilized man requires a thorough course of moral, intellectual and mechanical training in order to fit him or her for any sphere of usefulness in the civilized world, and the child of the red man must be treated to the same medicine, or be ultimately cancelled out.

GEO. LER. BROWN,
2d Lieut. 11th Infantry.

ADVICE TO EMIGRANTS.

THE New Orleans Louisianian—a colored newspaper—publishes a letter of interest to emigrants from W. O. Lyneh of Topekn, who has been authorized by the Kansas Freedmen's Relief Association to urge emigrants to go to other States than Kansas which is getting over-full. Governor St. John himself writes:

"We shall never turn our backs upon any law-abiding human being who is willing to put forth an earnest effort to make an honest living—but Kansas being yet in her infancy can absorb only a limited number."

At a meeting of citizens of Chicago, in March, a resolution was adopted inviting 50,000 colored people to settle in Illinois. Mr. Lynch advises those wishing to find homes in the Northern States to stop at Cairo, Illinois, where they will be met by committees of both the Kansas, and Chicago Association. He states that from Cairo, more than three hundred families have found homes in Illinois and Iowa, and are doing well; also that hundreds of applications for laborers come from Colorado, Nebraska, Iowa, Michigan and Ohio. Those wishing to go into either of those States may stop at St. Louis where arrangements will be made by the Kansas Association to transfer them without delay.

Those who have enough money to buy land and not become a burden to the State are of course welcome and free to go anywhere, but all who go empty-handed, should very carefully consider the question where work can be obtained, both for their own interests, and the reputation of the whole exodus movement. Those who are thinking of emigrating would do well to consider the wise suggestions of Mr. Frederick Douglas, who forcibly says.

"On this great question, we want light rather than heat, thought rather than feeling, a comprehensive appreciation of what the Negro has already on his side as well as of his disadvantages. A few years ago he had nothing, not even himself. Now he has himself, and his labor. He has more—a standing in the constitution of the United States, not to be changed by any conjunction of circumstances likely to occur. He may wisely bide his time. The situation at the moment is exceptional and transient. The permanent powers of the Government are all on his side. These are not the only people who have been in a movement of popular passion, maltreated and driven from the polls. The Negroes' rights will revive, survive and flourish again. The rising tide of civilization will eventually float him as it eventually floats all other varieties of the human family to whom floating in any condition is possible. . . . Without abating one jot of horror and indignation at the outrages committed in some parts of the Southern States against the Negro, we cannot but regard the present agitation as ill-timed and in some respects hurtful. We stand to-day at the beginning of a grand and beneficent reaction. National ideas are springing up all around us—the oppressor of the Negro is seen to be the enemy of the peace, prosperity and honor of the country. . . . At a time of hope and courage like this, it is unfortunate that a cry of despair should be raised. In Georgia, the Negroes are paying taxes upon 0,000,000 of dollars, in Louisiana upon forty or fifty millions, and upon unascertained sums elsewhere in the Southern States. Let the colored people of Georgia offer their six millions worth of property for sale, with the purpose to leave Georgia and they will not realize half its value. Land is not worth much where there are no people to occupy it, and a mule is not worth much where there is no one to drive him. . . . In the South the Negro has at last the possibility of power, in the North he has no such possibility. The exodus places colored voters in a country where their proportion to other classes will be so small as not to be recognized as a political element or entitled to be represented by one of them. As an assertion of power, by a people hitherto held in bitter contempt; as an emphatic and stinging protest against high-handed, greedy and shameless injustice to the weak and defenceless; as a means of opening the blind eyes of oppressors to their folly and peril, the exodus has done valuable service. But it is medicine, not food; not to be taken from choice but necessity. In anything like a normal condition of things, the South is the place for the Negro. Nowhere else is there for him the promise of a happier future. Let him stay there if he can, and save both the South and himself to civilization."

THERE is much to show the cruelty of our civilization. Even Christians were, as a body, long complacent over American slavery; they are now slow to action in behalf of the wronged Indian. "Ourselves first" is the keynote of their conduct. How many really able men, devoted to righting the wrongs of either of the races can we count up? Such men are usually kept at home. The weaker get of men or of money only what the strong can spare.

The following from a recent lecture by the Rev. S. C. Damon, Honolulu, Sandwich Islands, where the Chinese question is becoming a serious one, shows the practical barbarism of a civilized country.

This conflict of race prejudices is before our eyes. A discussion of the subject is sharply presented in the newspapers of America and those of our Islands. Every mail brings news relating to the conflict among political leaders, and even Christian editors, upon this subject. Not a few, even among good Christian citizens, follow in the wake of a demagogue who has uttered the party cry and watchword, "The Chinese must go." This is not a new cry. It was not heard for the first time on the sand hills of San Francisco. Less than forty years ago it was heard on the opposite shores of the Pacific, in China, "Englishmen must go—these foreign devils." Kearney's shriek is but a faint and feeble echo of the "Heathen Chinee."

May it not be useful to enquire how the issue was there met? Did the Englishman go? Why not? Was his presence any less offensive to the people of China than that of the Chinese to the people of America? The opium war followed, and in August, 1842, peace was restored; but China was compelled to pay $21,000,000—including $12,000,000 as war expenses, $3,000,000 to injured English merchants, and $0,000,000 for opium destroyed. Hongkong became an English colony. America looks on approvingly, and illustrating, perhaps, the old fable of "pulling the chestnuts out of the fire." The Chinese are made to understand that they must treat with "outside barbarians," and must repudiate the doctrine now so speciously advocated by some, that every nation had the right to protect itself by excluding immigrants seeking a domicile in a quiet and peaceful manner. The question arises, Shall the policy of the statesmen and diplomatists of England and America be now repudiated?

Imagine not that the end has come. Dragon's teeth which war has sown in China may produce a harvest of armed men. An educated and intelligent Chinese gentlemen, residing in London, writing for that leading English periodical, *Fraser's Magazine*, only two years ago, thus expresses his views: "Depend upon it, as soon as China thinks herself in a position to carry out her wishes, she will at once repudiate the clause legalizing the traffic in opium; and if England asks why she does so, she will answer that the moral sense of her whole nation requires it, and that justice, humanity and righteousness demand it. If England should then declare another war against her in support of the wicked cause, she will refer the matter to the impartial judgment of the world—the United States and the great Powers of Europe—rather than submit to the stipulations of a treaty, the terms of which were dictated and almost extorted after a most disastrous war, and the effect of which has been the ruin of her subjects."

Is this subject at rest? Is it forgotten? Only a few weeks ago, at the meeting of the International Evangelical Alliance held in Basle, Switzerland, where were assembled the leading laymen and divines of Europe and America, the world-wide renowned Professor Christlieb, Bonn, Germany, brought forward the opium question, and the following resolution was adopted unanimously, the whole assembly rising to make more emphatic their condemnation of this immoral traffic; "That assembly holds that the interest of Christianity itself urgently demands that there should be a change in the policy hitherto pursued by the English Government in regard to the opium trade, and commissions its officers to lay this resolution before the Secretary of State for India."

A Scottish missionary, Rev. Mr. Shoolbred, returning from India, thus addresses an assembly of his countrymen. In speaking of the efforts of the English in behalf of those suffering from the famine, he remarks: "I am sorry to say that by their opium traffic they are counteracting their own measures and doing much to intensify the terrible famine evil, which they desire to avert. It is high time I think, that the enlightened public opinion of Christian Britain should rise up and demand the suppression of this infamous traffic; and I deem no apology necessary for bringing the subject before this large and influential assembly of the Christian people of Scotland."

CORRESPONDENCE.

A LETTER FROM HAWAII.

Our readers will be interested in this pleasant and characteristic letter—accompanied by a generous gift to the Hampton School—from Rev. Dr. Thomas Coan, the veteran missionary, who found time during the busy days of his armor down when the Sandwich Island Mission was given up by the American Board, but is still at work in the cause he has loved and labored in for half a century:—

HILO, HAWAII, *Jan.* 17, '80.

Gen. S. C. Armstrong,

My dear General:—

You good journal, SOUTHERN WORKMAN, keeps us posted on many things relating to your work. We are much pleased with the WORKMAN. It is a worker, an elevator, a power for good. It seems a new leaven in the South, and it is good for the North. God grant that it may long be a dynamo-physical, social, political and spiritual motor in the right direction. Its tendency is to promote harmony, good will and gradual prosperity throughout the grandest Empire of States ever established by God upon our planet. And how desirable that the last vestige and drop of the old leaven of malice and wickedness be purged out of the Nation, and that from north to south, east to west, centre to circumference, we become a Unit, a "new lump" of pure gold, a jewel of beauty, a shining diamond of purest lustre, more brilliant than a stellary constellation.

True patriotism, pure Christian love, intelligent faith in God, and a faithful adherence to truth and right would exalt our beloved nation over all the nations of the earth, and cause our flag to float out in every clime, over all seas and under the whole etherial blue, as an emblem of liberty, of peace and love, of intelligence and of power, on which the saints and angels in heaven could look down with rapturous joy. Yours, with all the work of your coadjutors, is a work of love and patience, a warfare of faith; and we pray that you and they may put on the whole armor of God and wield the sword of the Spirit with more skill and power than ever.

We are much interested in the "new departure" at Hampton. This experiment with the Indians promises much good to the aboriginel tribes of our country and to the Nation. Had one-half of the funds consumed in broken treaties and wars been devoted to the efforts of an educated Christian civilization under wise and just laws, would not these abused savages have been, to a great extent, saved, and the nation honored and blessed of God?

The burning of Academic Hall seemed an unfortunate event, and we sympathize with you and all the sufferers, but we are glad to learn that the Hall was fully insured, and that the calamity will not much hinder your work. Before the news of the fire reached us it was my purpose to send you a trifle, as recognition of our continued interest in the Institute, and the burning has quickened this purpose into action: By our next week's mail, I will D. V. send orders to Castle & Cooke to forward to you Exchenge for fifty dollars in gold, which you will please appropriate for the Institution in any of its departments. It is but a mite, but it goes with my blessing, and with prayers that the Hempton Institute may be greatly prospered in the training of many, many thousands of our colored race and of our aboriginel tribes.

We have heard that you propose to visit *aina hanau* before long. We hope that we may see you at Hilo, and in our Emerald Bower.

You would perhaps be surprised to see the changes. From Waiken to Waipiu we have a chain of twenty sugar plantations, almost touching one another; and all elong the coast, the smoke-stacks are puffing, the mills crushing, the ovens roaring, the boilers boiling, and the centrifugals buzzing. We have a first-born Railroad of three miles in Hilo, and our telephones begin to talk.

Mrs. Conn and her sister unite in kind regards.

Most truly yours, T. COAN.

STRIKES AND LOCK OUTS.

If the deily newspapers are to be believed, there is a wide difference of opinion prevailing, between employers and those employed in various branches of industry, as to what wages shall be paid. These differences of opinion bid fair in the near future to result in many "lock outs" and "strikes." A "Lock Out" is when Capital says to Lebor, "You must either accept the wages we offer or quit." A Strike is when Labor says to Capitel, "You must pay the wages we demand, or your industry will stop." Which of the two evils will occur the more frequently is simply a matter of prediction; but it is a fact of experience, based on sound philosophical reasons, that summer is the time for strikes, and winter for lock outs.

The object of this paper is to show the economic laws that govern all lock onts and strikes: and I feel very confident that a general understanding of these laws would make both employers and employed think twice before they lock out or strike once.

The fundamental law governing employers and employed, is the general law of exchenge, which may be expressed as follows: Two persons, having two things, meet; each prefers what the other has to his own: the result is an exchange—the law of it is found in the diverse preferences of the two parties. Clearly, the bottom fact of every exchange is the reciprocal *willingness* of the two men to give what they have for what they want. *Willingness*, then, is at the bottom of every exchenge. If a man wants me to work for him for a doller a day, and I do not want to do so, there is no law of the United States to make me: if I want a man to pay me five dollars a day for my services, and he is not willing to do so, there is and can be, no State nor National law that will compel him. This truth is self-evident; yet to many it seems a mystery.

Capital buys labor, when it prefers the labor it gets, to the wages it gives; and Lebor buys capital, when it prefers the wages offered, to retaining itself to itself.

Labor can earn nothing without capitel; but Capital can earn nothing without labor: being mutually dependent, what injures one must injure both; and what benefits one must benefit both. Let us take a practical illustration. Suppose a capitalist employ 1,000 laborers et one doller per day, and they strike for one doller and a-half. What results? Two sets of sufferers: the laborers are getting nothing per day, and the capitalist no more; he suffers from interest, rent or taxes, loss of market, rust of machinery, etc.; the laborers are obliged to use their savings to support themselves and their fellows. It is clear that the longer the strike lasts, the worse it is for both; yet how seldom is this palpable fact accepted by the parties most in interest?

In this country, there is no necessity of one men employing another; slavery is dead; and one man will employ another only if he thinks there he a chance of selling the lebor he buys at more than he pays.

It is a safe rule to lay down that no Strike is ever successful, except when Capital can afford to pay more wages than it has been paying; nor is any Lock Out successful, except when Labor has been receiving more then its share of the profits of production.

There is nothing that shows the growth of economic knowledge more, than the increased tendency to settle wage disputes by arbitration. The old time employers, who would swear roundly that no third party should run their business, are daily becoming less numerous; and the old time workmen, who knew no other remedy for low wages than to stop work themselves and stop all others working, are less frequently to be found. Still, enough of both classes remein to prove that neither strikes nor "lock outs" will become lost arts for at least a generetion or two. There can be no fairer way of settling any dispute then to leave its decision to three experts of good character. A disinterested Board of Arbitration will get at all the facts, and their decision he in accordance.

For Labor to seek to get the most it can for itself is right, and for Capital to do the same thing is equelly right. If present wages are 50 cts. per day, Labor has e perfect right to ask Capital to pay 60 cts.; but Capital has an equal right to ask labor if it will not accept 40 cts. If Capital and Labor cannot agree on a rate of exchange by reasoning together, no emount of force will bring about an agreement. Capital is free: Labor is free: any forcible means adopted by either to enslave the other is ridiculous, unlawful, and certain to end in failure.

Trede Unions, admirable as they are in some respects, are dangerous if carried to extremes. Workmen with interests in common have e perfect right to combine for mutual protection; *but so have employers.* As Trades Unionism spreads so do combinations among capitalists. If it be right for the executive committee of some Trades Unions to tell a man he must not work in such and such a shop, it is equally right for the combined owners of similar shops to say, "We will none of us employ such and such a man." The wisdom of either of these acts is not to be discussed here; but we cannot get around the fact, that if it be right in one case, it is right in the other.

Trade Unions generally fall into the mistake, made by the three tailors of Tooley St., who, in writing of themselves, began, "We, the People of Englund." Tradea Unions are not big enough as a rule; for while they may include a mejority of the craft, there is always a minority skirmishing around, powerful to wreck them, if not neutralize the efforts of the majority.

Strikes generally cost more than they come to, even if they are apparently successful. Suppose a number of men were receiving a dollar a day and should strike for a dollar and a dime; thet after forty days' idleness the employer consented to pay the advance. Some labor agitators would claim this as a victory: perhaps it would be; but it would be very much like the one yrrhus won, when he said, "Another victory like it and I am ruined." Let us look et it: $1.00 per day for 365 days is $365; $1.10 per day for 325 days is $357.50. A very simple bit of arithmetic will show that the "successful" strikers actually get $7.50 less in wages than if they had continued et $1.00. This is only a small part of their loss, for during the strike they had to live, and they bed to live off their own savings, or the savings of someone else. Who will estimate how much this living will foot up?

The most unfortunete thing about strikes is the fect that they are led by incompetent people—the "Agitator," as he cells himself, is generally as lacking in skill at his craft and in habits of industry, as he superabounds in loquacity and effrontery. A glib tongue, a brazen face, and a small amount of brains is about the analysis of most of the self-proclaimed Workingmen's friends.

In a prolonged contest between Labor and Capital, the latter is almost sure to win; for, as has been stated, we must all eat to live, and unemployed capitel can buy food longer than unemployed labor. If the contest be enough prolonged, both would starve, but which would starve first?

So long as man is the animel that exchanges, and labor en exchangeable thing, just so long will there he contentions about wages. No humen legislation can help it—it must fix itself according to the law of demand and supply. We might as well try to legislate the North Star out of existence, as to arbitrerily try to fix weges in a free country.

Another weak point in combinations of either Lebor or Capital, is that—all members are put upon an enforced equality. Suppose two journeymen join a "Union," one of whom is skilful and industrious, the other lazy and unskilful: let the mandate go forth that all journeymen must be paid such and such a rate; is it not certain the skillful man is injured as much or more than the lazy fellow is benefited? In case of a long strike the prudent have to take care of the improvident,—indeed, it seems that in the practical working of these economic bodies, the more worthy have to suffer that the less worthy may be beuefited to some degree. T. T. B.

NEWS OF THE MONTH.

FOREIGN.

Queen Victorin has returned to England.

The ex-Empress Eugenie has arrived at Cape Town, South Africa, le good health.

Nineteen German and other Socialist agitators who have been ordered out of France have left Paris.

A Berlin despatch says the expedition fitted out by the Royal Geographical Society has started for Central Africa to establish a permanent station of the society on the banks of Lake Tangnoyika.

The captain of the Ouion steamer *Montana*, which recently went on the rocks in Cook's Say, Holyhead, has been suspended six months for neglecting to use the lead.

A despatch from Serlin says: "Emigration to North America on an exceptionally large scale is taking place from Scandinavia. Two thousand Swedes have already left Bremen and 1,000 left Christiania for New York on the 4th inst."

The *National Zeitung* states that from the 4th to the 11th of the present month 5,800 persons left Bremen. The emigrants come from all parts if Germany, and include many skilled workmen. This decided increase of emigration is evidently connected with the new Army bill, and entails very serious loss upon the country.

In Orent Britain the result of the elections for Parliament gives the Liberals a decisive majority over both the Conservatives and Home Rulers. The following is the result: Liberals, 356; Conservatives, 237; Home Rulers, 59. The Liberals will have in the next Parliament a larger majority that the Conservatives had in the last.—Who will be called to form the Ministry has not yet transpired, but all parties acknowledge that the victory is Mr. Gladstone's.—Lord Beaconsfield was given an audience by the Queen on Saturday. Sir Stafford Northcote has already vacated his official residence.—The London correspondent of the *Scotsman* says that the project of a monument to the memory of the late Prince Imperial, in Westminer Abbey, is likely to be abandoned on the accession of the Liberal Ministry.

The regicide Otore was executed at Madrid, Spain, April 14th. A crowd of 50,000 people assembled, but order was maintained.

DOMESTIC.

CINCINNATI was visited by an unusually heavy rain storm on Friday, April 16th. The rain storm was followed by high winds, by which several houses were unroofed and some weak buildings blown down.

At Newark, Ohio, the iron and slate roof of the gas-works was blown off, buggies were overturned, and fences and trees blown down. At New Philadelphia and Canal Dover, Ohio, the storm was destructive. At Milford Centre the Post Office and several other buildings were unroofed. At Lebanon the roof of the Lebanon House was blown off. At Wheeling, West Va., the roof of a freight depot was torn off and some of the rafters were driven through a 12-inch wall of a brick building adjoining. The steeple of a church was blown down.—According to a de-patch from Milwaukee, Wis., the most severe storm of the season visited the northern portions of the State on Friday, and several inches of snow impeded travel in the vicinity of Oshkosh.—A despatch from San Francisco said the storm which had prevailed throughout the State for several days was the severest ever known on the llee of the Central Pacific Railroad through the mountains. Snow-sheds were broken down and trains were stopped.—In Missouri the storms were more severe than in any other State; the loss of life and destruction of property were very great.

PARTS of New Jersey, Pennsylvania and Virginia have been sadly devastated by forest fires of unusual magnitude. Many thousand acres in Jersey alone, including large tracts of valuable timber land, have been destroyed, principally in Ocean, Monmouth, Cumberland and Atlantic Counties. At or near Brickburg, nine buildings if not more, were burned. Four building were destroyed at Lakewood, and three at Seven Stars. A resident of Herbertsville lost 5,000 cords of wood, valued at $16,000, and the extent of damage done to the cranberry bogs is set down at $30,000. At one time the entire village of Toms River was threatened with destruction, but by the united efforts of a large portion of the residents the danger was averted.

THE number of immigrants at Castle Garden, New York, last week, reached 9,412. Of these, 3,621 arrived on Saturday, 1,189 by the City of Chester. From April 1 to 15, inclusive, the arrivals aggregated 14,891. The total arrivals from Jan. 1 to April 15, inclusive, were 49,566, against 15,716 for the corresponding period in 1879, 11,119 in 1878, 16,381 in 1877, and 12,338 in 1876. Those recently arriving appear to be of a desirable class and are principally Westward bound.

IT is estimated that the recent piano strike in New York cost the workmen $108,000 in loss of wages, and the manufacturers $80,000 in damage to their business. It will take the Steinway workmen eighteen months at the advanced rates to make up their loss.

Services in commemoration of the death of President Lincoln were held at his monument in Springfield, Ill., on Thursday, under the direction of the Lincoln Guard of Honor.

PHILADELPHIA has an elevated railroad company with $5,000,000 capital and ex-Minister Boker as President.

On the morning of April 6th, Johnson C. Whittaker the colored cadet at West Point, was found bleeding and apparently half unconscious, with his feet tied to his iron bedstead and his hands bound. He asserted that he had been attacked during the night by three men, who struck him some heavy blows, cut slits in his ears, and enforcing silence by threats to kill him, tied him to the bedstead. The case is being investigated by the authorities. Opinions differ as to the probability of an outrageous attack by other cadets, or a personal infliction of injuries.

The U. S. Senate has at last, after ne eight days' debate, passed the bill for the ratification of the agreement with the Uto Indians of Colorado.

The number of failures for the first quarter of 1880 was 1,432, liabilities $12,777,074. For the same time in 1879 the failures were 2,924, liabilities $43,312,665; in 1878, failures 3,355, liabilities $82,078,839; in 1877, failures 2,869, liabilities $54,538,070.

EDUCATION IN EUROPE.

The following statistics in regard to the present condition of popular education in the different countries of Europe are gathered from the educational organs of Germany: Germany, with upwards of 42 million inhabitants, has 60,000 schools, attended by 8,000,000 scholars, giving an average of 100 scholars to each institution. The expenditure on account of schools averages 71 cents per head of the population. England, with 34 million inhabitants, has 58,000 schools, attended by 2,000,000 scholars, or an average of 82 to each school, and at an expense of 44 cents per head of the population. Austria-Hungary, with 37 millions of people, has 30,000 schools, attended by 3,000,000 pupils or 100 pupils each, at an expense of 40 cents per head of the population. France, with 37 millions of people, has 71,000 schools and 4,700,000 pupils, or 66 per school, the expenditure averaging nearly 35 cents per head of the population. Spain, with 17 millions of people, has 20,000 schools and 1,650,000 scholars, or 86 per school; its expenditure averaging 23 cents per head of the population. Italy has 28 millions of people, 47,000 schools, and 1,900,000 scholars, or 40 per school, the expenditure being 28 cents per head of the population; while Russia, with 74 millions of people, has 32,000 schools and 1,100,000 scholars or 36 per school, the average expenditure being nearly 8 1-2 cents per head of the population.

CHRISTIANITY.

A high authority, Sharon Turner, has prepared the following statement of the progress of Christianity. At the close of each century the number of believers is given:

Century.	*About*
First	500,000
Second	2,000,000
Third	5,000,000
Fourth	10,000,000
Fifth	15,000,000
Sixth	20,000,000
Seventh	24,000,000
Eighth	30,000,000
Ninth	40,000,000
Tenth	50,000,000
Eleventh	70,000,000
Twelfth	80,000,000
Thirteenth	75,000,000
Fourteenth	80,000,000
Fifteenth	100,000,000
Sixteenth	125,000,000
Seventeenth	155,000,000
Eighteenth	200,000,000

Hand Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On every can will be found full directions how to prepare Crab Salad, and Deviled Crabs,—two dishes concerning which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surprising delight at the palate. The meat of the crab is, beyond peradventure, the most delicate and delicious of all sea-food, far exceeding in fineness of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For picnics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $6 00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases in any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $1.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

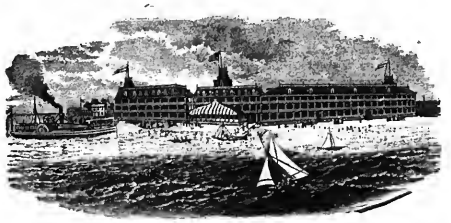
S. C. ARMSTRONG, *Principal,*
Hampton, Virginia.

THE HYGEIA HOTEL,

OLD POINT COMFORT, VA.

Situated within one hundred yards of Fort Monroe;



At the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier going and returning, with the U. S. mails, landing only 20 rods from the Hotel, which is sustantially built and

COMFORTABLY FURNISHED;

Has hydraulic passenger elevator, gas and electric bells in all rooms; water rooms for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or public building in the country. And as a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this House, with accommodations for about

SEVEN HUNDRED GUESTS

Presents inducements which certainly are not equaled elsewhere as a summer resort, or cold weather sanitarium. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleeplessness and nervousness the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics at the Hygeia.

For further information, address by mail or telegraph.

H. PHOEBUS, Proprietor.

Oysters! - Oysters!

The canning of steamed oysters has long been an important branch of industry in Baltimore; but the canning of the very best oysters in the Chesapeake, almost on the spot they are caught, is an enterprise just established. The undersigned feels confident that in opening a Packing House at this point, he is affording his fellow-citizens in all parts of the country, an opportunity, (which he hopes will be appreciated) of getting the best and freshests of oysters, prepared in the most healthful way, at the most moderate prices.

An Oyster may remain out of water many hours, nay days, before it be completely spoiled; but from the moment it is caught and exposed to the air a process of deterioration goes on. It needs no argument to show that the sooner an oyster is hermetically sealed after being caught the better it will be in taste, solidity saltiness, and benitfulness. Within a radius of fifteen miles of this point, are millions on millions of bushels of oysters, from the best of which will the stock used, be selected. The time consumed in transporting the bivalves from their beds to the Packing House is not worth considering, especially as the majority of the boats employed are the little "canoes" peculiar to these water.

My packing is at present divided into three grades, according to the size of the oysters used; the same care, however, is taken in the preparation of all grades. A case of one pound cans contains 4 dozen: a case of two pound cans contains 2 dozen. Owing to the unsettled condition of the market, I can only quote to-day's prices, which are as follows:

Olnnts of Hampton Roads, No. 1— No. 2 $3.00 per doz.
Benutics of Hampt'n Roads, " 1 $1.30, " 2 $2.00 " "
Cove Oysters, " 1 $1.00, " 2 $1.75 " "

The above prices are net cash, and remittance may be made by draft on New York, Chicago, or Norfolk, or else by P. O. order. Authority to draw at sight with bill of Lading attached will ensure the prompt forwarding of any goods ordered. If preferred, cases may be sent by Adams express, C. O. D.; but unless specially directed, all shipments will be made via Norfolk, Va.

Direct all telegrams, via Fort Monroe.

HEALTH AND HUMANITY.

THE POISONED SPRING.

A STORY OF SANITARY SCIENCE.

ly to the now dwelling, and, standing on the portico, cried out: "It shall come to pass that they who sit in judgment shall *find that Deacon Holman, his wife, and daughter, came to their deaths by drinking water poisoned by the outflow of their own house.*" Her shrill voice rang through the hall, and penetrated to the distant bedchamber where the deacon was just arousing himself from a troubled sleep. It broke upon his ears with ter-

to the spring beneath.

The case was thus made as clear as noonday, and the coroner charged the jury, in unmistakable language, as follows:—"Gentleman, this case is one of extraordinary interest, and teaches a lesson which cannot be too thoroughly understood by all present. A family enjoying all the luxuries that wealth could give have been swept away by diseases of their own creation. The very

HEALTH AND HUMANITY.

THE POISONED SPRING.

A STORY OF SANITARY SCIENCE.

BY A NEW YORK PHYSICIAN.

Deacon Holman made a good selection of a site for his new house. The old homestead was located by the road which ran along the windings of the creek in the valley. It was a damp, unhealthy place; chilled by heavy dews and fogs at night, and scorched by the concentrated rays of the noonday sun.

The range of the thermometer was from 20 to 30 degrees in the summer months. Chills and fever of a severe type, better known as fever and ague, was the prevailing disease of the autumn in the early history of the settlement, but now bilious and typhoid fevers were prevalent. The deacon, however, did not build a new house on a new site, because the old house was unhealthy; the reason he gave was, that the old house was no longer fit for residence. The true reason was, that with increase of wealth, and the approach of his only daughter to adult age, his pride was stimulated to have his family rank among the village aristocracy. The old homestead had, indeed, once been the most costly and imposing residence in town, but through neglect it had now fallen, together with the out-buildings, into a state of irremediable decay. The once stately poplars which surrounded it had so broken down as to materially add to the general appearance of dilapidation. But one feature of the place remained unchanged, and that was the ancient spring, whose cool and refreshing waters gushed out with never-failing stream from the very base of the hill. It was this spring which induced the elder Holman to locate the old house in its present situation. Many other settlers were attracted to its vicinity, and for years it was the only source of supply of drinking water. And though in time, great changes occurred in the village, and other springs and wells came to supply, to some extent, the wants of the people, yet the old "Holman Spring" never lost its reputation as an unfailing source of pure cold water, whether the season was dry or wet. It was the resort especially of laborers and of the poor, so that at certain hours of the day there was often a constant procession of men, women, and children, with their pails, going to and from the spring.

Deacon Holman had become rich, partly through inheritance, but more directly by a penurious economy. He was a hard task master, and literally ground the faces of the poor. Having risen from poverty to his present respectable and comparatively opulent position, like many persons of limited education, and of naturally aristocratic tendencies, he treated the poor with great severity, and in all his business transactions, this trait of his character was exhibited. As his daughter approached adult age, he grew more and more exclusive in his family associations.

The deacon finished his new house in May, 187-. It was a beautiful cottage on the table-land above his house. The grounds were laid out with great care, including all the surroundings of the old homestead. A problem arose in the construction of the house, as to the best method of drainage, and the deacon was strongly urged by a neighbor to join him in laying a common drain pipe from the hill to the creek in the valley below, so that all the house refuse might be conveyed directly to the running stream. This proposition the deacon rejected, alleging that the plan was too expensive, though he really did not wish to aid his neighbor. Instead of adopting this course, he resorted to the common expedient of constructing a cess-pool on his own grounds. This cess-pool was located on the brow of the hill and consisted of a deep excavation, the sides walled up with brick, the bottom, loose porous earth, and the whole tightly covered and sodded. Into this structure, the drain pipes of the house emptied their contents, the liquid portion of which found its way out through the porous bottom into the neighboring sub-soil. A cess-pool thus constructed, though always extremely offensive when uncovered, never requires to be emptied, as the dissolved sewage finds channels through which it escapes into the sub-soil stream. It is scarcely possible to devise a better method of poisoning a household with its own excreta than by the construction of an ordinary cess-pool; for, on the one hand, the foul gases by reflux through the drain pipes may penetrate every part of the house, and especially the sleeping rooms where washbowls are located; and on the other, by soil soakage the springs and wells are contaminated.

The new residence having been completed and arranged, the family opened it to the aristocratic few with great pomp and parade. The envious crowd without gazed upon this exhibition of wealth in dull amazement, and for a time the entrance of the Holman family upon its new career of prosperity, was the common topic of village gossip.

Among the improvements of his grounds, one of the most important made by the deacon, was the permanent closure of all the approaches to the old spring, by posting the usual notice, forbidding all persons trespassing, under the penalty of the law. The season had been dry and hot, and the water of the old spring had been unusually grateful to the poor, and the laboring people; consternation and indignation was depicted on the faces of all who sought water on the first morning after the gates were closed and the threatening notices were posted. Many and loud were the imprecations heaped upon the deacon's head, as the disappointed housewives returned homeward.

Among those who came late to the well was old Aunt Betty. She was a noted village character, once highly educated and refined, but now reduced by misfortune to poverty. She was generally regarded as insane by the better classes, but among the poor, her quaint speeches had gained for her the reputation of a prophetess. When she learned what had been done, she went directly to the new dwelling, and, standing on the portico, cried out: "It shall come to pass that they who sit in judgment shall *find that Deacon Holman, his wife, and daughter, came to their deaths by drinking water poisoned by the outflow of their own house.*" Her shrill voice rang through the hall, and penetrated to the distant bedchamber where the deacon was just arousing himself from a troubled sleep. It broke upon his ears with terrible significance, and reverberated through the deepest recesses of his soul like a voice from the unseen world. Others of the household who heard this weird prophecy laughed at Betty's insane whim, but in spite of all his efforts the deacon could not dull the first strange and painful impression which it made. Fearing that in revenge some reckless person might poison the spring, he strengthened the defences to its approach, and allowed no one to visit it except his own servants. Thus all were rigidly debarred from the use of the water except the members of his own house.

The summer wore on, drought prevailed, and great was the demand for good water among the poor. Daily their maledictions were heard against the deacon and his family, sole possessors of the great treasure, pure spring water. And very often as he passed along the street, the deacon would hear the murmurings, and invariably the strange prophecy of old Betty would flash through his mind and make him shudder.

One morning, late in September, Dr. Snook's carriage drew up before the deacon's house: for a time it was seen there daily; then twice daily; then every hour or two; the doctor grew more and more grave and abstracted, and, as was his wont when patients in high life were dangerously ill, chewed his tobacco with great vehemence. At length the windows of the house were closed, the doctor ceased to call, and the village paper announced the death of Fanny Holman, only daughter of Deacon Holman, by malignant diarrhea. Scarcely was the funeral over, when the doctor's carriage appeared again at the gate of Deacon Holman's house. It was quickly rumored through the town that the deacon's wife was down with dysentery. The case was evidently very grave, for the doctor consumed tobacco with unusual energy. Consultations were held with physicians summoned from a distance, but evidently to no purpose. On the twentieth day the house was again darkened, the church bell tolled the age of the deceased, and the paper announced the death of Mrs. Fanny Holman, wife of Deacon Holman, by *malignant dysentery.*

Hundreds gathered at the funeral, mostly drawn by curiosity. It was very evident to the observers that the chief mourner at that funeral was already the victim of some form of the disease which had ruthlessly swept away two-thirds of his household. His face was haggard, his eyes sunken, and a characteristic duskiness overspread his cheeks. He muttered during the service, called for water, and when it was offered him, thrust it aside, saying, "There is death in the cup." He was taken to his home wildly delirious, and during the seven days which he survived, he called only for water, but when the cup was placed to his lips he thrust it rudely from him, declaring that the spring had been poisoned.

As the seventh day of the deacon's illness began to dawn, a shrill voice rang through the hall and broke with awful distinctness in the chamber of the dying man. It was another who pronounced by Betty: "Woe! woe! unto this house! Ye have poisoned the waters and the waters have poisoned ye all!" The deacon, gasping for breath, sprang up, and screaming "Murder!" fell back a corpse. The village paper announced the death of Deacon Holman by *malignant typhoid fever.*

The public excitement, which had gradually increased as one after another of the deacon's family died, reached its climax when the strange prophecy of Betty was reported, together with the repeated statements of the deacon in his delirium, that the spring had been poisoned; this final announcement of the fact by Betty, and the deacon's dying cry of murder, greatly intensified the current rumor. Though there was apparently no more significance to these remarks than should be attached to the whims of an insane old woman, and the ravings of a man in the delirium of fever, yet so intense had become the conviction that there was some unusual cause for the death of the whole family, that the reports of poison and murder were freely circulated. At first it was believed that this family were being afflicted for their prosperity, and that the disease was a visitation of God for their sins. But the events attending the death of the deacon, turned the current of popular feeling, and the desire was everywhere expressed that there should be a thorough investigation into the causes of the sickness and death of the deacon and his family.

The coroner, Dr. Jones, was summoned, and the investigation began. The autopsy revealed only the usual appearances after typhoid fever. The contents of the stomach gave no traces of poison, after the most careful analysis. No reliable evidence could be obtained from Betty or others, and the case was about to be closed, when the coroner suggested that the spring water should be examined for poisons. Accordingly the chemist took several bottles under seal to his laboratory, and proceeded with his analysis. The following was his report to the coroner:

"The water, when first taken, appeared to be very pure; it sparkled, and was very pleasant to the taste. On standing twenty-four hours it threw down a thick, blackish sediment, which was very offensive, and had the odor of sewage. On applying chemical tests, it was found to be composed of the usual ingredients of sewers and cess-pools. In my opinion the spring receives in some way the contents of a sewer, privy, or cess-pool."

Thus enlightened as to the condition of the water which had supplied the family, the coroner was not long in finding the source of the poison. Laborers were set to work to trace the connection, if any, between the spring and cess-pool. The cess-pool was uncovered, and though nearly empty, the putrid gases escaping were horribly offensive. But the workmen proceeded to explore the bottom of the sink, and guided by the blackened and offensive earth, readily followed the course of these under or sub-soil currents down the hill to the spring beneath.

The case was thus made as clear as noonday, and the coroner charged the jury, in unmistakable language, as follows:—"Gentlemen, this case is one of extraordinary interest, and teaches a lesson which cannot be too thoroughly understood by all present. A family enjoying all the luxuries that wealth could give have been swept away by diseases of their own creation. The very wealth which should have been to them a source of protection from sickness has contributed directly to their destruction. The three diseases of which this family died are but different expressions of one cause, acting upon different constitutions. The verdict which *you* will find in these cases, is the same verdict essentially which should be pronounced in every death from diarrhea, dysentery, and typhoid fever in this community."

Thereupon the jury returned the following verdict: "*We find that Deacon Holman, his wife, and daughter, came to their deaths by drinking water poisoned by the outflow of their own house.*"—*The Northampton Journal.*

THE SANITARY DUTIES OF PRIVATE INDIVIDUALS.

Published by permission of "Ladies Sanitary Association of London."

I. The humblest among us, the lowest person in the social community, has it in his power, even under the most wretched circumstances, at least to do his best to keep himself, his things, and the place where he dwells, in a clean and wholesome state. It may not be what he would wish; but it may at least be what he honestly can. Many things many dishearten him, disgust him, throw him back; but if from his soul he really does all he can, he not only benefits himself, but is also a benefactor to the poor creatures around him; for they gain both by the example and by the fact that anybody or anything around them is clean and wholesome.

But, allowing fully for ignorance, and as fully for unavoidable circumstances, most of the poor neglect what they really might to do keep things right. I do not speak of those that lose all heart to help themselves, but of those that could and might, and yet do not. *Some* effort at personal cleanliness, *some* attempt to get rid of dirt and vermin, may always be made. *Something* may always be done to skin and hair and ragged clothes, even when soap and a brush are wanting, and water itself is scarce. Bedding many at least be aired and shaken, cupboards dusted out and put in order, things that smell bad may be banished, window-panes made clear, and floors, closets, and other places kept clean, with such means as the inmates possess. And, in particular, great sturdy boys might give a little of the time they now spend in street idleness, to try and make things better at home for their fathers and mothers. Moreover, we can all try to avoid what many injure others. Consideration for other people, scrupulous care not to hurt or annoy, (duties which are too much forgotten), would suggest many ways, in which to avoid causing possible harm to somebody; and many remind us, that, not being at war with our neighbor, we do not wish to lay torpedoes for him, in the shape of neglected drains, or refuse heaps, to give him fever or diphtheria, or by pouring acids, chemicals, or hot water, down sewers, to raise poisonous gases to kill him,—by strewing pavements with orange-peel to throw him down,—by flinging offal or refuse into the streets to taint the air he breathes, or to otherwise cause him damage. Whether in quitting a house, or in transactions abroad, we can all try to leave things safe and wholesome for the next comer.

The performance of these duties rests with the people themselves, and not with any law that can be made. No law can compel them to be clean in their persons, dress, habits, and rooms, to make a right use of pure water, fresh air, light, food, and clothing, to be always temperate, and to avoid causes of illness; matter which at present are not always attended to, even by the affluent.

II. From the richest to the poorest, we all have *some* influence on somebody; and we fail in our duty, unless we use that influence to promote such habits in others as tend to preserve health and keep off disease. It is our duty to save our neighbour from harm whenever we can. It is our duty, if he seem to be doing some unwholesome thing, or living in some hurtful way, to tell him of it. And it is, above all, our duty to impart our knowledge to others. It is, moreover, the duty of us all to acquaint ourselves with the laws of health at every opportunity.

But the best of all influence is that of example. Every-one of us, as far as our power goes, can set an example of personal cleanliness and neatness, of good domestic arrangement, of judicious habits of exercise and of avoidance of hurtful eccentricities, of wholesome living, of strict temperance, and of doing what we can to make a neat and pleasant home both for say we live with and for ourselves. We can set an example in adopting the best practicable sanitary improvements: also in a ready and willing compliance with the requirements of the law, which we should support and help, not obstruct, as it is with us and for us, not against us. In duly performing our own private sanitary duties, we are exerting on others our most valuable influence. As to those who use their influence to obstruct, the prevention of disease, who dissuade people from using known sanitary precautions, who foster drunkenness or dirty and unwholesome modes of living, their conduct is wicked to a very great degree, for it is directly tampering with human life.

III. Thus much of the general sanitary duties of *all* individuals. I now come to the special sanitary duties which arise out of each person's position, trade, or station in life.

1. One of the most important is that of a *householder.* All masters and mistresses of houses, from the palace down to the meanest inhabited hovel, owe it to themselves, and to all living with them and around them, to

keep the place they inhabit in a wholesome state, and to do all they can to prevent illness in it. This applies to every occupier of the smallest hut or cottage, whether living alone or with other people. No one has a right to keep his dwelling in such a state as to run a risk of making himself or his neighbours ill; nor has he any smells. The water-closet should not be supplied directly from the cistern that you drink from. Pure water to drink is of such importance that no pains should be spared to ensure it. If the details now specified be neglected by the private householder, no possible public measure can supply the deficiency.

good sanitary condition, and not incur any nuisance such as a stable, slaughter-house, open drain, piggery, cow-house, &c.; and he ought to refuse to take any place that is unwholesomely situated, not furnished with proper conveniences, or in a wrong state. If such places were systematically refused by all respectable tenants,

keep the place they inhabit in a wholesome state, and to do all they can to prevent illness in it. This applies to every occupier of the smallest hut or cottage, whether living alone or with other people. No one has a right to keep his dwelling in such a state as to run a risk of making himself or his neighbours ill; nor has he any right to allow himself to become ill, if he have power to prevent it. For illness is easily set going; but no one can confine it or bind it down to be of this or that kind only, that it shall not hurt other people, that it shall not spread, that it shall not pass from a mild form into a dangerous one; in short, that it shall only go thus far and no farther. Therefore, every occupier of a house is bound to see that everything is done within his own premises to prevent and avoid illness. And if this were strongly and honestly done in each house, if every occupier took pains to find out the best known ways of preventing illness, and tried to do his duty well in his own place only, a very large proportion of the present amount of illness might be avoided, all the expense, pain, and loss of time of that illness might be saved, some premature deaths might be prevented, there would be fewer people in weak health, more in strong health; and all this without the help of government or the assistance of any town council or local board, and solely by the exercise of independent self-help and self-reliance, by every one's minding his own duty and his own business.

As occupiers of houses, then, the first thing we have to see to is *drainage*. We ought to take care that nothing but clean rain-water runs into any open drains, ditches, or ponds. Some of the finest country houses are made unwholesome by the sewage from the house being conducted into a pond or ornamental lake, whose exhalations taint the air; and some of the prettiest rural villages are visited by fever, or other malignant disease, simply because the drainage from a cottage or two is allowed to run into some ditch, hidden perhaps by vegetation. In all cases sewage should pass into covered drains. For farming purposes, it may be allowed to run off at a distance from any house and to leeward, on a bed of ashes, soot, or peat-charcoal, mixed with bog mould, sand, coombe-rock, shell-marl, road sweepings, leaves, chalk, lime-rubbish, tan, or fresh earth; but a man ought daily to lay on a fresh surface, the heap to be afterwards cut out and carted off for manure. Fresh earth is a valuable disinfectant.

If the house be drained into sewers, our task is easy. We have only to see that the communication with the sewer are perfect and air-tight, that they are kept free and clear, and that the sink-holes are plugged or trapped, and the water-closets provided with pans and supplied with water, to prevent foul air from coming back into the house. But we must also see that the bell-traps are kept clear, and in their places, and that there is water in them. I have repeatedly seen cases of fever, diphtheria, &c., some of them fatal, caused by bell-traps being left out. Servants are remarkably careless about this; and it is as necessary for the master or mistress to see to it, as to see every night that fires and lights are out, and doors and windows fastened. The poor are also very careless about it, which they would not be if they knew how poisonous that invisible gas is that comes up through the sink-holes. When the trap is broken or lost, a wet cloth should be folded and thick enough over the hole, to keep the foul air down till another bell-trap is supplied.

As long as cesspools exist, they ought to be regularly emptied before they get too full; and where they are being emptied, disinfectants should be used, so that you, your neighbours, and the workmen, be not made sick with the smell. A sixpenny bottle of Burnett's or Condy's disinfecting fluid, used according to the printed directions, will generally suffice; and when such a very horrid nuisance may be abated for sixpence, no one is justified in neglecting to do it.

Those who get their water from a well should see that it is not tainted by drains and cesspools. All possible communication should be carefully stopped, and a certain distance should intervene. For if a drain or cesspool is near your well, nothing can hinder the water from being tainted. And tainted water is a frequent cause of dangerous and fatal illness. Even water-pipes may be contaminated by contiguous drains. It is still a common blunder with the workmen to carry rain-water pipes down into drains or cesspools. The effect is, that foul air passes up the pipe, leaks out at the joints, and comes out at the spout-head. Dangerous illnesses are often caused by the foul air from the spout-head going in at the window, or by its leakage from the joints into the house. There is but one remedy, which is, to make the rain-water pipe stop short of the drain or cesspool, into which the water from it should run through a bell-trap. Thus the foul air is kept down. If you can possibly have an air-pipe to carry off the foul air from your drains or cesspools, by all means do so; but the air-pipe ought to stand up above the house like a chimney, that no one may breathe the air from it.

No care is too great, to see that soil-pans in closets, and bell-traps in sinks, are in good order, and well supplied with water. For the maintenance of these few inches of water in their right place, is your only protection against the bad air which is always trying to come up. But, as leakage of foul air will frequently occur, every water-closet and scullery should have *two* openings to the outside air, making a constant little thorough draught, and should be effectually separated from the house by a well-closed door. Windows and ventilators from these places should never open into the house.

With respect to *water-supply*, the householder's duty, in addition to what was stated just now, is, to see that pails, boilers, filters, jugs, and other vessels used for drinking-water are clean, and so placed that nothing can fall into them, as bits of meat, beetles, or mice, are liable to do. Cisterns ought to be often cleaned out, instead of being forgotten, as they generally are, for many months. If this be not done, the water gets bad; a black sediment forms at the bottom of the cistern, and dangerous illness of somebody in the house may be the consequence. Lastly, that part of the premises where the drinking-water is kept ought to be free from bad smells. The water-closet should not be supplied directly from the cistern that you drink from. Pure water to drink is of such importance that no pains should be spared to ensure it. If the details now specified be neglected by the private householder, as far as possible public measure can supply the deficiency.

Clean windows and plenty of light, and strict cleanliness in every part of the house, rest with no lawgivers, but entirely with the occupier of each dwelling, whom you cannot compel to be clean by Act of Congress. There are no writs for the scouring of dirty houses. Every one of us must see to these things for ourselves. The poor can do it as well as the rich, for it is chiefly trouble that is required, not money.

But another necessary thing, the frequent, regular, and careful removal of every sort of refuse, is neglected by rich as well as poor. The rich take little heed of matters flung aside in dust-holes, scullories, knife-houses, and backyards; matters that decay and taint the air, and incessibly cause illness that is then charged to the account of town councils and dormant Acts of Congress instead of to their own carelessness in not looking after the state of their own houses and the doing of their own servants. The poor throw refuse into the streets before their door, or into any corner or closet in the house, or into some alley or back-yard, and are then quite ready to attribute to dirty neighbours, or to neglect of the landlord, or to anything, in short, outside of themselves, the bad air and the sordid smells that pervade their home, the failing health of the mother, and the sickly children. Some, in addition, keep goats, rabbits, or other animals, in their houses, or quantities of birds, which taint the air, and make the house filthy; or they keep pigs or donkeys just outside, the smell from which comes in at every window and door, and is breathed by the inmates. In the country, heaps of refuse or manure, or puddles of foul water, are often close to the doors and windows; and among the substantial farmers and wealthiest people, cow-houses, stables, piggeries, and manure-heaps are often much too near the house. Servants throw dead birds or animals anywhere out of sight, perhaps close under the windows, forgetting how they poison the air in the process of decay.

A place for refuse should be appointed for every house; the ashes, which have some deodorizing power, should be thrown on the heap; and the whole should be entirely and frequently removed. It is best to burn the animal and vegetable refuse in the kitchen fire. Nothing should be thrown carelessly about, either in-doors or out. No collections of bones or fat should be in the house; and servants should be looked after. In short, common domestic cleanliness, and the determination to allow nothing unwholesome, are absolutely necessary.

Ventilation is another neleeted point. Scientific contrivances may or may not be possible; but doors, windows, and chimneys, which are the common ventilators of every house, may always be made a proper use of, to let air pass in and out. Chimneys should never be stopped up: a temporary closure may be needed on account of rain or back-smoke, but it should be removed again as soon as practicable. All windows should open, especially the upper sashes. Half an inch or an inch open at the top of a window will keep a room sweet without perceptible draught. But people will not always open their upper sashes, because of difficulty in shutting them up again. Some means of easily closing them should therefore always be provided: either brass catches screwed to the upper sash, or a stick to push it up, or a cord and pulley. If the lower sash only will open, and you cannot have it altered, you should, as Mr. Bird says, raise the lower sash a few inches, and fill up the space beneath with a piece of stout board that fits it closely: air will then enter between the meeting-rails in the middle of the window, and be directed upwards to the ceiling. Roller-blinds should be fixed, not at the very top of the window, but an inch or two lower, that air may pass in over them; also not too close to the window. Windows may be fitted with blinds which also act as ventilators: that is, a piece of calico stretched slightly across the window, by hooks, or on a light iron frame, close to the sash below, but sloping inward above, so as to throw the air, admitted by the partly-opened window, up to the ceiling: thus giving "privacy without draught."

Crowded rooms, churches, chapels, and schools might be advantageously ventilated thus: and all who are concerned in bringing together large numbers of people, are bound to see that their health and safety are in all ways cared for while assembled. Some may admit air by shafts turning upwards against the walls; others, may have their windows, or the upper parts of them, hinged so as to fall inwards with a slope, resting on each side on a sloping wooden ledge, so as to direct the air up to the ceiling. Whichever plan be adopted, it seems agreed that the best method of admitting air is to direct it upwards to the ceiling. For the *exit* of air there are many contrivances. Provision should always be made to carry off the heated air from gas-lights, as well as that from the breath of people, it being most unwholesome to breathe the same air over and over again. If what is already specified were always faithfully carried out by every occupier of a house, the gain in avoiding illness, and in improved health and strength, would be very great. Consumption and many other maladies are caused by living in unventilated rooms. This is a matter in which we, as householders, can only help ourselves.

Sometimes a house is visited by an unwholesome smell whose source is doubtful. The remedy is often both difficult and yet urgently needed. Competent workmen must be employed; and the best way is, to make an opening as near as possible to the smell, and endeavour to trace it. The commonest causes are, some imperfection in the covering of a drain or cesspool; a rat-hole communicating with a drain; a fault in a chimney, admitting the vapour behind the battening; or, a dead rat or cat. I have known the inmates of houses half-poisoned, and sometimes made very ill, by every one of these nuisances. The householder should spare no trouble to discover and get rid of them.

It is the duty of every intending tenant to see that the house, cottage, or room, that he proposes to take, is in good sanitary condition, and not near any nuisance, such as a stable, slaughter-house, open drain, piggery, cow-house, &c.; and he ought to refuse to take any place that is unwholesomely situated, not furnished with proper conveniences, or in a wrong state. If such places were systematically refused by all respectable tenants, there would be fewer of them.

But there are tenants who will rent anything; any hovel, that is called a house; or any cellar, closet, or corner where human beings can be stowed. To such it is useless to appeal. I can only urge the duty of not offering such places for letting; and at this point my business, which is that of inculcating private duties, ceases, and the law steps in and prohibits. But to another class a word may be said.

To those who care not in what sort of place they put their families, as long as it answers their purpose in earning money, we may urge that life and health are worth having as well as money. The strong man, who is out all day at his work, who gets fresh air and change, and who lives heartily, may not be hurt; but weak women and tender children constantly fall sick, and often die, from being crowded up together in one room, or from living over stables, or from some other cramped and unwholesome arrangement. Now a different expenditure of this man's means, or a little extra trouble to find a proper room or rooms, or selecting some place a little farther off, or a small giving up of drink or tobacco, or of something not absolutely necessary, might enable them to live where all could be strong and healthy, and yet within reach of the work.

It is mainly by the neglect of landlords that the lower orders of people are compelled or allowed to live in a manner that directly brings sickness and death by its unwholesomeness, and that indirectly brings also sickness and death as results of the drunkenness, debauchery, and vice, which come from thus crowding folks together in places insdequate and unfit for their occupation.

Every medical man can enumerate the many preventable diseases and deaths resulting from unwholesome houses. Thus, out of a list of 4,100 cases of disease, accident, or injury, treated during the six years ending with the 31st of December, 1863, about 700 cases and 49 deaths appeared to be distinctly caused by unwholesome dwelling-places.

Remembering what a sacred thing is human life, it is frightful to think that so much of it is destroyed, not by the act of God, but by the neglect of man.

Employers, again, ought to have regard to the health of their work-people. The distress occasioned to shop-women by the prolonged hours of standing behind counters, should not be lost sight of. The time should be shortened when possible, and means of occasional rest should be provided. Milliners, drapers, tailors, shoemakers, and bakers, &c., ought to see that sufficiently large and ventilated rooms are allotted for working purposes, and that the hours of labor are limited as much as possible; and *customers* ought so to give their orders as not to occasion undue pressure in the work-room.

Ship-owners and *sea-captains* ought to see that everything is done on shipboard to obviate every cause of illness, either among the crew or passengers.

Managers of schools owe a similar duty to the children assembled under them. School-rooms should be models of sanitary arrangement; both for the health of the scholars, and as an example which they may remember in after life. A knowledge of the means of preserving health ought to form part of education. Teachers should proportion the pressure of school-work to the capacity of the child to bear it, otherwise serious illness may be caused.

Mothers, nurses, and others in charge of infants or children, ought to exercise conscientious care of them, which is not always done. Ignorance, self-sufficiency, and carelessness, cause many illnesses and deaths, which are avoided by those who are truly careful, and who seek for the best information as to these duties. Some of the commonest errors are, dosing infants with sugar and butter, or with gin; swathing them so as to hinder free breathing; giving them raw fruit; teaching them to walk too soon; and giving them soothing syrup or cordial, or some "quieting" medicine. All these things are hurtful.

A private sanitary duty important to us all, is *Moderation*, the avoidance of every kind of excess, and *Temperance*. Every indulgence, habit, or pursuit, pushed to extremes, is hurtful. But Temperance in respect to strong drink is of vital consequence. The evils caused by alcoholic drinks, are gigantic, and are fast increasing. Professor Acland says, the "evidence which has been collected to prove the extent of misery which is brought on the human race by the abuse of alcohol in various forms is now, altogether, absolutely overwhelming." Dr. Lankester, late Coroner for Middlesex, said, "The death from alcoholic poisoning in Great Britain is prodigious; it may be set down at something like one-tenth of the whole death rate of the country. Sir Astley Cooper said, "If the poor could see the white livers, and shattered nervous systems, which I have seen as the consequence of drinking, they would be aware that *spirits* and *poison* mean the same thing." Such statements and opinions might be multiplied to any extent. It is the duty of every one of us, then, to discourage the use of alcoholic drinks: and to discountenance the causes and and practice of intemperance. Each person can take his own means of doing so, whether it be by total abstinence, or by strict moderation: but one or the other is absolutely necessary. The limited good afforded by strong drinks, is gained by a very small quantity, and that not in a concentrated form. All beyond is injurious, except when required medicinally under some unusual circumstances.

In fine, in all these different ways, every person, in each position and relation of life, in every trade or profession, is bound in duty to see, that in his place, in his occupation, and within his lawful influence, the causes of disease and illness are as much as possible done away. In this way every one, by his own voluntary act, may contribute to the well-being of the nation.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. IX. HAMPTON, VA., JUNE, 1880. NO. 6.

MOUNT ARARAT.

THE CHILDREN.

I suppose if all the children,
Who have lived thro' ages long,
Were collected and inspected
They would make a wondrous throng.

From superstitious notions, and the latter from inability to clamber up the rugged rocks.

"We come now to the steep and danger-
ous part of our ascent. Soon we are treading on the eternal snows. In places we flatter our-

workshops, at drill, &c. The members of the Indian Committees and others, made special
[illegible] of support and gratification at the progress of this branch of the work, and promised the weight of their influence for its furtherance.

"STAND OUT FROM THE DANGER."

We were fast approaching Cape Hat-
teras. Already its dim outline was appearing to the southwest, and we were

THE CHILDREN.

I suppose if all the children,
Who have livad thro' ages long,
Were collected and inspected
They would make a wondrous throng.
Oh, the babbls of the Babel;
Oh the flutter and the fuss,
To begin with Cain and Abel,
And to finish off with us!

Think of all the men and women
Who are now and who have been;
Every nation since creation,
That this world of ours has seen.
And of all of them, not any
But was once a baby small,
While of children, oh! how many,
Have not n'er grown up at all.

Some have never laughed or spoken,
Never used their rosy feet;
Some have even flown to Heaven
Ere they knew that earth was sweet.
And indeed I wonder whether,
Should we reckon every birth,
And bring such a flock together,
There is room for them on earth.

Who would wash their smiling faces?
Who their saucy ears would box?
Who would dress them and caress them?
Who would darn their little socks?
Where are arms enough to hold them?
Hands to pat each shining head?
Who would praise them? who would scold them?
Who would pack them off to bed?

Little happy Christian children,
Little savage children too;
In all stages of all ages,
That our planet ever knew;
Little princes and princesses,
Little beggars wan and faint,
Some in very handsome dresses,
Naked some, bedaubed with paint.

Only think of the confusion
Such a motley crowd would make,
And the clatter of their chatter
And the things that they would break!
Oh, the babble of the Babel,
Oh, the flutter and the fuss,
To begin with Cain and Abel,
And to finish up with us!

MOUNT ARARAT.

An American missionary to Turkey, Rev. R. M. Cole, thus describes an ascent of the lofty summit which is now called Mount Ararat, and is supposed to be, if not the very mountain, one of the peaks of the chain on whose slopes the ark rested.

"Until a recent summer month, the top of Mount Ararat had never, as far as I know, been trodan by Western feet, Bayazid is an old town, formerly of considerable importance. In the picture, you see it as it appeared before the Turkish and Russian war.

"With two native attendants and a good government guard, we set out across the plain from Bayazid. The poor, ignorant, superstitious townspeople gather about us and beg us to desist from such a sacrilegious undertaking. God's angels were guarding the Ark on those lofty heights, and no mortal might approach!

"But away we hasten over the plain. Bearing to the eastward, we pass through quite a field of high reeds, which are said to be the hiding-place for savage wild boars. Turning to the left at the end of some ten miles, we make our way up along the eastern slope of the mountain, winding this way and that, now in a deep ravine, passing beneath some overhanging cliff that threatens to crush us; now they fall back, leaving our pathway in an open space that suggests the idea of a plain. Ere long, we pass alongside an extinct volcano. Some fifty years ago, old Earth gathered up its firs of wrath, and spit it out in torrents for a little time. The mountain was literally torn asunder and the debris scattered in all directions.

"On we go till, after a ride of some twenty miles, we dismount at the tent of Yisoos Agha, chief of the Jalal Koords, a warlike tribe that inhabit these regions, grazing their flocks through all the long summer, even up near to the eternal snows, but in the severer part of winter dropping down near the plain, where they pass their time in low dirt hovels. They are notorious brigands, and he must be well-guarded who would venture among them. We found them to consist of a large encampment of three divisions. Perceiving the hat on my head and the strong guard about my person, they advance with remarkable cordiality, take me from my horse in a most stately way, and lead me to the tent as they would a king.

"We take along five of these hospitable Koords, who are our friends for the time being, and can be of much use in taking us over the best way to the point we have in mind, for the last part of the ascent. But at the end of twelve miles both they and our faithful horses have to be left behind, the former from superstitious notions, and the latter from inability to clamber up the rugged rocks.

"We come now to the steep and dangerous part of our ascent. Soon we are treading on the eternal snows. In places we flatter ourselves we are putting foot on *terra firma*, but what is our surprise to find, under the debris that has rolled down from above, a field of solid ice. On we go, pausing ever and anon to take in the magnificent scenery that stretches off on every hand. On this side, Persia with its ever-varying hills reaching far away to the silvery Oroomia lake; on that, Russia, the great Erivan plain, with the beautiful Araxes, threading its way on towards the Caspian sea. At the south and west the Turkish dominion, which is not wanting in all the variety of mountain and plain. Down from our dizzy heights, we look upon the arid plain which appears in the foreground of our picture.

"I should like to state that I was strongly impressed with the feeling that the ark may have rested on this particular mountain—not on the precipitous part, but near to it. The Koords are to-day taking their numerous herds up and down this same valley that we ascended, very near to the limit of perpetual snow. Hence, as I retraced my steps down the mountain-side, I could but feel that perhaps down along this same valley, wended its way that solemn procession of beasts and creeping things of every description, passing out on to the plain to the eastward.

ERZEROOM, TORKEY."

HENRY BERGH AND HIS WORK.

Fourteen years ago, Mr. Henry Bergh of New York, started in that city, a "Society for the Prevention of Cruelty to Animals," the first society of the kind in the world. He is still going on with his good work, and branch societies have been established in other cities. He has done a wonderful amount of good, not only to the poor suffering animals, but to mankind, for no one can be cruel to helpless creatures without degrading himself, and mercy and kindness are tests of civilization.

"One day, a poor emaciated horse fell at Duane street, on Broadway. Before the officer, who went for means to shoot the horse, had returned, Mr. Bergh had procured hay, oats and water for the starving animal, which, after a few hours' rest and feed, was able to get up and walk home.

"The coachmen of the city, mostly without the knowledge of the employers, began using a round leather bit-guard, barbed with short spikes, so that when the reins were tightened, the nails sink into the side of the animal's head, and made the animal exhibit a very fashionable degree of mettle. These were discovered and quickly captured.

"One day he saw from his window a skeleton horse, scarcely able to drag a rickety wagon and the poverty-stricken driver. Mr. Bergh hastened out, and said:

"'You ought not to compel this horse to work in his present condition.'

"'I know that,' answered the man; 'but look at the horse, look at the wagon, look at the harness, and then look at me, and say, if you can, which of us is most wretched.' Then he drew up the shirt-sleeve of one arm, and continued: 'Look at this shrunken limb past use; but I have a wife and two children at home, as wretched as we here, and just as hungry.'

"'Come with me,' Mr. Bergh replied, 'I have a stable down this street; come and let me give one good, square meal to your poor horse, and something to yourself and family.' He placed oats and hay before the stay of the family, and a generous sum of money in the hand of the man."

DISTINGUISHED VISITORS.

Honorable R. W. Thompson, Secretary of the Navy, Admiral Scott, and a party of Senators and Representatives, including the committees on Commerce in both Houses, and several members of the committees on Indian Affairs, came from Washington May 7, on the United States steamer Tallapoosa, and visited Fortress Monroe, Hampton Institute, Portsmouth Navy Yard and Norfolk. Besides the Honorable Secretary and Admiral Scott, the party consisted of Senators Ingalls of Kansas, Perry of Michigan, Vance of North Carolina, Randolph of New Jersey, Pendleton of Ohio, Voorhees of Indiana, Williams of Kentucky, Windom of Minnesota, Boothe of California, Withers of Virginia, and Representatives Scales of North Carolina, Haskell of Kansas, Pochler of Minnesota, Ainslie of Idaho, Hiscock of New York, Reagan of North, Gunter of Arkansas, Baker of Indiana, Brewer of Michigan, Haley of Connecticut, Morse of Massachusetts, Briggs of New Hampshire, Erritt of Pennsylvania, Witthorne of Tennessee, Cannoo of Illinois, Denster of Wisconsin, Manning of Mississippi, Goode of Virginia, and Cabell of Virginia.

The visitors gave two hours to an inspection of the school buildings and the various branches of industry, especially of the Indian department, seeing the Indian in their various workshops, at drill, &c. The members of the Indian Committees and others, made special expression of surprise and gratification at the progress of this branch of the work, and promised the weight of their influence for its furtherance.

HEROES WITH DUSKY SKINS.

The Norfolk *Landmark* pays this deserved tribute to three heroes.

"A fact comes to us from Charleston which ought neither to be slighted nor forgotten; and it has all the greater claim on us because the heroes of the story belong to a race which has few organs of expression to reach the public. In brief, it is this: Two Negroes descended into a well to put it in order. There they encountered a stratum of carbonic acid gas, and fell under its asphyxisting influence. Then a man of color named Simons stepped forward as a volunteer to go to their aid. He, too, fell as soon as he came within the influence of the deadly vapor, and was hauled up more dead than alive. There were now three men *hors de combat*, but another brave fellow, William Robertson, stepped forward and went down, and on reaching the scene fell as if shot by a musket. Three men now lay at the bottom of the fatal well, and one beside its mouth. Here was enough to have appalled the stoutest hearts; but still another gallant fellow was found to risk his life in the cause of humanity. James Seymour went to the rescue, and, like those before him, fell under the malignant gas which he encountered. At last the bodies were taken out. One only was reanimated, and he one of the workmen who first went down; but the generous volunteers, William Robertson and James Seymour were dead—martyrs to a chivalrous devotion which any man might be proud to have attributed to him. There is a homily in the death of these brave fellows which needs no elaboration at our hands, and we have told this story in order that the names of these gallant men may not be altogether forgotten when South Carolina calls over the roll of her heroic dead."

COTTON MILLS IN THE SOUTH.

A Southern contemporary alludes, with pardonable pride, to the prosperity of the various small cotton factories that have been started in South Carolina within two or three years. Most Northern people will rejoice with our Southern friends that the experiment of working up cotton at home, instead of sending all of it from one to three thousand miles away, has been successfully tried in the South, and they will hope that manufacturing will not be restricted to a single variety of raw material. Nearly every industry which in the Northern States and England has flourished is practicable in the South; woods, metals, coal and water power are abundant, and the labor supply, if not sufficient to the demand, would soon become so. Aside from the immediate benefits enjoyed by a community when manufacture comes to the aid of agriculture, the indirect results are invaluable. Life and property immediately demand and receive new safeguards when capital and industry are represented by something besides land and crops; occasional concentrations of population tend to a more general increase of intelligence; market values of all home products are enhanced, and the "middleman" who, under one name or another, keeps many a sparsely settled neighborhood poor, is to a large extent avoided. Let other Southern States follow the example of South Carolina; "there's millions in it."—*New York Herald.*

"Nearly all the Negroes in and near Darlington, S. C., now own horses and cows, and many own land which they are able to work with their own money. Churches are numerous, and newspapers are in demand."

Many a child goes astray, not because there is a want of prayer or virtue at home, but simply because home lacks sunshine; a child needs smiles as much as flowers need sunshine.

Temperance.

REASONS FOR SIGNING THE PLEDGE.

1. As a check to the *desire* for intoxicating liquors.
2. As a protection against *temptation from friends.*
3. As an answer to *opposition from enemies.*
4. As a preservative to the *drunkard.*
5. As a *bond of union* between the members of society.
6. As a public *testimony against drunkenness.*
7. As an *encouragement* to the reformed.
8. As an *example to all.*

"STAND OUT FROM THE DANGER."

We were fast approaching Cape Hatteras. Already its dim outlines was appearing to the southwest, and we were anticipating a close run to its rocky shores when the order to tack was given, and we stood out into the Atlantic, leaving the cape far astern.

"Is not the water deep enough to make a closer run to the shore?" asked Adjutant Culver, who was impatient to get a good sight of land after the three days' voyage.

"Certainly," answered the captain, gazing off to the south at the signs of an approaching storm.

"But, why then did we tack out here?" asked the adjutant.

"Because," replied the captain, "if in running close to the cape we had become in any way disabled, we might have drifted on the rocks and have been wrecked. A good sailor, when possible, stands out from the danger."

When I see a young man leaving the pure influences of the home circle, and spending his hours in places where drink and gambling have their programme, although he may be present only as a spectator, yet I tremble for his safety, and long to warn him to stand out from the danger.

When I see the moderate drinker indulging in his occasional glass, and looking down with a contemptuous smile on the fanatical temperance people, I know that he is sailing close along the rocks of intemperance, and that his only safe course is to stand out from the danger.

When I see fair hands proffer the sparkling wine to the noble and gifted, I think what a terrible wreck theirs would be if the rocks were encountered; and I pray that the scales may fall from the eyes of the tempted, so that they they may stand out from the danger.

TEMPERANCE REFORM

The following resolutions were passed by the last General Assembly of the Presbyterian Church at Saratoga, 1879.

Resolved, 1. That we hereby reaffirm our conviction that the only safe principle on which the Temperance Reform can be conducted is total abstinence from all intoxicating drinks, as a beverage; and also hereafter, as heretofore, we will seek by all lawful methods the entire suppression of the liquor traffic.

2. That while we deplore the mischiefs and miseries induced by intemperance, and especially deplore the fact that among heathen nations to whom we send our missionaries, men dwelling in Christian lands, for the purpose of gain, transport and sell large cargoes of strong drink, thus counteracting our missionary effort, we yet rejoice in the signs now visible everywhere that a strong and solid public sentiment is slowly forming against the whole rum power. The skies are brightening, and we look for a great uprising, before which this curse shall be more and more restrained until it is swept away.

3. That we commend most heartily the work of the Woman's Christian Temperance Union; that we recommend to all who desire to circulate Temperance documents, or to give currency to Temperance literature—the Temperance publications of the Presbyterian Board, as well as those of the National Temperance Society and publishing House; and that we call upon Temperance men everywhere to organize at once and thoroughly for the enforcement of the restrictive features of our present excise laws.

4. Finally, we declare our solemn conviction that this whole reform, in all its features, and from first to last, is of God; we invoke for it the co-operation of all the servants of God; and we beg for it an appropriate place in the ministrations of God's house and in the prayers of God's people. So sustained, though it may have its transient reverses, in the end—and that we believe not far away—we shall achieve a decisive victory, and "this great Babylon be thrown down, to be found no more at all."

...ing both destitute and ignorant, have been | perpetual ignorance by "shiftlessness."

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, H. W. LUDLOW, } *Editors.*

MRS. M. F. ARMSTRONG, MR. W. N. ARMSTRONG, MR. T. T. BRYCE, MR. J. C. ROBBINS. } *Regular Contributors.*

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application.,

To secure safety, it is important that money should be sent by checks, Post-office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed at the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work from all parts of the country, is solicited and will be done cheaply and well. Estimates will be sent on application.

For the months of July, August, September and October, the SOUTHERN WORKMAN will return as usual to its original, eight page form; reassuming after that, for eight months, its present twelve page form.

REPORT OF PRINCIPAL.

HAMPTON, VA., *May 19th*, 1880.

To the Trustees of the Hampton Normal and Agricultural Institute;

GENTLEMEN:—

This school opened in April 1868, with 15 pupils and one teacher and a matron. Up to this time 1429 have been admitted; some of them remained but a few weeks. Including this year's class of thirty-eight, 353 have graduated. Of these, 11 have died. Not less than ninety per cent. of graduates have devoted themselves to the work of teaching their people, with a success and steadfastness which on the whole surpasses expectations and gives the strongest encouragement for continued efforts for their race. The Negro teacher like the Negro laborer, on his own ground, can hold his own, and is the best man for the place.

This year's enrollment has been as follows: colored men, 181; colored women, 105; Indian boys, 47; Indian girls, 21; Total, 354. Average age of young men, 18½ years: average age of young men, 20. There has been a gain of 32 colored students over last year; less day scholars, but more boarders. The catalogue of the year gives further particulars.

Resting directly upon public confidence with no intermediate society or denomination, a clear statement of the ends of the school, and of the means employed, should, I think, be made from time to time, at the risk of repetition, for the sake of the benefit that is sure to come from an intelligent appreciation of proper efforts for the ex-slaves of our country, now citizens with power for good or for evil.

Our end is not to develop the mind of the negro by collegiate studies—that is a leading aim of the principal colored institutions of the country; but rather to build up manhood and character in our pupils, and through them among their people;

FIRST,—By combining with a course of English studies a manual labor training, which shall not only be instructive but promote self-reliance and character, and help many of this poverty-stricken people to secure an education by their own efforts.

SECOND,—By co-education of the sexes: giving an equal chance to those on whom equally depends the future of their people.

THIRD,—By sending out teachers fitted for the care of the free schools of the South, (the demand for whom is now far in excess of the supply) willing to do and endure the duties and difficulties of working in poor and unattractive regions, where most of their people live, as well as capable of the higher and better positions in cities, to which they are sometimes called.

The education of Indians which is an incident of our work for the blacks has in no way interfered with it, the latter having not only not suffered from this cause but steadily grown in magnitude and efficiency. It has taught the Negro that there are other grievances than his own in the world, and enlarged his ideas and sympathies by making him useful to others. I am convinced that our work for Negro civilization offers peculiar advantages for improving Indians. No change of methods or of direction has been required. There is no race jealousy or friction to speak of.

The difficulty with both races is not so much ignorance as weakness or deficiency of character; not lack of brains but of moral stamina. Both need drill throughout the range of living.

It is not wise to adjust a work like this to the needs of the unusual, exceptional characters who are to be found in these races, but rather to their average condition as represented by those who are received from a wide range of country.

The knowledge of the English language by the Negro race gives it an advantage without a parallel in the history of any race in a similar condition. With this language, and in contact with those who use it, they have imbibed ideas, a certain spirit, and have gained an access to the resources of civilization that offset the darker experiences of the past, and encourage us to expect a survival and rise of the ex-slaves of our country.

MANUAL LABOR TRAINING.

For the sessions of 1877–8 and 1878–9, the charges to students and credits for their labor were as follows. The accounts for the current year cannot be made up till after July 1st.

1777–8,	Charges to students	$22,537.83
	Paid by them in labor	14,505.88
	" " " in cash	3,377.51
	Paid for them by friends as Beneficiary aid	3,223.82
	Transferred to Ex-Students' account, to be paid up gradually,—about one-third may not be paid	1,673.94
	Cr. balance	243.33
1878–9,	Charges to students	29,566.69
	Paid by them in labor	17,691.25
	" " " in cash	2,151.17
	Paid for them by friends as Beneficiary aid	2,194.38
	Transferred to Indian account, paid by government,	7,453.52
	Transferred to Ex-Students' account, to be paid up gradually,—about one-third may not be paid	2,087.02
	Cr. balance	2,010.65
1878–9,	Deficit on U. S Indians cost of tuition is not included	1,274.49

Payment in labor is *bona fide* on their part, but the value of much of it to the school is from 20 to 40 per cent. less than the amount paid (or credited) them for it. Their work cannot equal that of full-grown, trained employees. This is an expensive method of training students, but it is worth doing. Instruction is even more important than profitable production. The question is not so much what the student can do for the farm as what the farm can do for the student. Hence the farm is loaded with more laborers than it really needs, but to whom it pays full wages. Wages must be up to the point of encouragement. Able-bodied farm boys get 8 cts. per hour. Wages are according to the kind of work done, but, as a rule the man get more than the women.

The stock farm, "Shellbanks" of 330 acres, given by a friend of the school, as announced last year, has been improved. (See Farm Manager's Report) principally by the work of eight farm students who with other labor students in the Saw-Mill, Knitting Room, etc., forty-five in all, being both destitute and ignorant, have been employed at from eight to ten dollars a month with board, studying two hours every night, thus fitting themselves for the Junior Class, and by close economy saving up from $85.00 to $100.00 by Oct. 1st, 1880, at which time they will enter school, and with two days labor each week and by steady work during vacation (3½ months) be able to complete the three years' course of study without a dollar's aid in charity, excepting their tuition $70.00 a year to meet the cost of instruction. All students are charged $10.00 per month for board, washing, etc., besides cost of hooks and clothing, and are expected to pay half in cash and half in labor.

There is no better work than putting the bottom of the ladder where the man is, so he can, by his own effort, climb to the top. It gives him skill, character and practical knowledge. But capital is required to do this.

Last September, on the basis of a sixty horse power Corliss engine, that had been presented by Mr. G. H. Corliss, a saw-mill outfit was purchased, and up to date 1,200,000 feet of lumber have been sawed and used, or sold at good prices. The mill has, however, been idle one-fourth of the time for want of capital to keep stock of logs on hand. Fifteen labor students as above described, under a good manager, have done the work.

A matcher and planer and lath machine have since been purchased.

On the present temporarily covered brick foundation another story, 16 feet high, is to be erected this summer, and supplied with wood-working machinery, to supply building material of every kind, all under the care of Mr. Chas. D. Cake, of Hampton, whose management has been satisfactory. We hope to give employment, some of it of a higher grade, another year, to twenty or twenty-five destitute young men. They must be earnest and capable both mentally and bodily; we take them on three months probation. The cost of the building and machinery, $15,000.00, has been generously assumed by Mr. C. P. Huntington, of New York, as a contribution for the benefit of the colored race. We have reason to expect a fair interest on the capital invested aside from the benefit to students. Would that others would follow his noble example.

The Knitting department gives a good account of itself (see Engineer's Report) having been better organized and enlarged, having undertaken to produce the current year fifteen thousand dozen pairs of mittens for S. B. Pratt & Co., of Boston, who sell them chiefly in the North-west. It gives employment to twenty-two students. Knitting is, as a rule, too hard work for our girls. The instruction here is not specially valuable, but it is genuine self-help, and labor is turned into cash, dollar for dollar. This department needs a suitable room; it is noisy, and very objectionable where it is, the room being needed for other purposes. It can be provided for in a proposed building to be hereinafter referred to.

The oyster, crab and fruit canning establishment of Mr. T. T. Bryce, a private affair recently erected near the saw-mill, gives employment to hundreds of the poorest classes of negroes and to others and is doing an excellent thing for this community.

For accounts of other important industrial operations, see reports of the several Managers herewith submitted. Along the whole line of industries there has been improvement. A separate account with each is kept. The exact condition of each is known and will be published in the Treasurer's Report.

The spirit of work continues excellent. "More work" is the cry. Our boys have now the best chance. There is nothing for poor girls who may wish to work a year before entering school. There could be such a class, but only on a basis of some ten thousand dollars capital which would provide sewing, etc., for, say, a hundred women in this vicinity. Preference would be given to those from a distance who should desire an education and be willing to work for it. There would be no chance for careless or indifferent workers. Few realize the number of both sexes that are fixed in perpetual ignorance by "shiftlessness." First-rate student material to work upon does not abound. But the aggregate in the vast masses of the South is great.

Our industrial departments should be placed on a solid basis. As a rule, from the kind and quantity of labor employed, they will support themselves, less the salaries of their managers.

An endowment of one hundred thousand dollars is needed to put them on a solid foundation, independent of annual charity and powerful for good to the races under our charge.

CO-EDUCATION OF THE SEXES. COLORED WOMEN.

In the eight or ten leading institutions of the country, devoted to the Negro race, the sexes have been, for over ten years, brought together from different parts and educated together. In not one that I know of has this course been regretted, and there has been no serious trouble, after an experience with thousands of young men and young women in boarding establishments of from one hundred to three hundred pupils at a time. All of them are convinced of its wisdom and success.

The condition of woman is the gauge of progress. The past rests more heavily on the colored woman than on the colored man. Quite as much should be done for her as for him. Mingling in recitations, at meals, in social intercourse, always under reasonable direction and restraint, is good for both. The average Negro has not very civilized ideas about women.

Human nature is thus satisfied yet restrained. We do not regret the freedom we have allowed; it has resulted in many well and wisely mated pairs.

Our work is never secure till it terminates in family life which is the unit of Christian civilization. This is the basis of progress because it is the condition of morals. We must create the conditions.

The wife lifts up or drags down the husband. Woman's influence is more subtle and far reaching than man's. This has not been sufficiently recognized in the missionary work of the day.

The moral rally of the colored girl of the better class, under favorable conditions, is, I think, wonderful. There is a ground of hope for and faith in her because of her conservative instincts that ought to have ten fold the encouragement that they now get.

In no race of like conditions in the world, do we find as much, or more, womanly dignity and self-respect as in the improved colored woman of our country.

Our Christian civilization has not done one notable thing specially for the Negro girl; it has done a good deal against her. She is practically without social or legal redress; she has no protector but her conscience. On her integrity is staked her race. Her needs and her value to her people ought somewhere to touch the springs of help.

Here and in other like schools, the young women number as three to five in comparison with the young men. About this proportion has continued for many years. The man has a better chance. Life has to him more stimulus; obstacles are less. The result is natural, but work for both should and could be equal.

Mentally the sexes appear about even; the young men however, showing a broader interest in affairs.

Bodily, the colored girl is, in the judgment of our teachers, most of whom are ladies, weaker than the average white girl of her age. Mixed blood is not, I think, favorable to physical strength.

I am glad to report that since the middle of April, a cooking school has been in operation every afternoon from 2 till 3 P. M. for Indian girls (six at a time), and from 3:30 till 5 P. M. for colored girls (nine in a class) under a competent and experienced teacher. This important branch of woman's education has at last been reached and will add not a little to the value of our work.

For next term, we have planned a flower-garden and a vegetable garden, worked by girls under good example and instruction.

THE WORK OF GRADUATES.

The testimony of Southern educational men to the success of our graduate teach-

ers since 1870 has been all that we could wish. They are now in greater demand than ever for the charge of the free colored

Girls from Dakota Ter. Nov., 1879:

other mechanical work. They have, under direction of a carpenter, built a two-story carriage-house, 24x50 ft., weather-boarded

ting down prices as above indicated does not seem worthy of the nation. It is applying economy at the wrong place.

ers since 1870 has been all that we could wish. They are now in greater demand than ever for the charge of the free colored schools of this and other States, over twenty more than we could supply having been called for this year. From 10,000 to 20,000 children have been tanght hy them the past year. Tha majority of them are in the country, with salaries of from $25.00 to $30.00 a month for fiva and six months, which have of late been paid with promptness. During tha off months, the industrinl training received hera gives them resonrces which they find indispensable. Many teach winters and farm in summer. This is the rontina of a country teacher. Without an industrial education they would seek the cities, might fall into temptation and be lost to the cause of education. In North Carolina, several teach in winter and raise cotton in summer.

Their letters, published monthy in the SOUTHERN WORKMAN, are valuable testimony to the condition and needs of their race, to the sentiment of the whites, and, indirectly, to their own good work. State officials treat them with uniform courtesy; good men everywhere are fair and appreciative. They have no complaints to make.

Their difficulty is with the "old time" ideas of their people. With few exceptions, they take up the Sunday-school and Temperance cause, and are apt to antsgonize the religious notions of whatever ignorant preachers and people they meet.

The lower stratum of Southern Negroes is saturated with superstition, nnd, while passionately responsive to certain doctrines of Christianity, does not take kindly to its morality and resents rebuke. With patience and tact, teachers nre sure in tho end to overcomo this trouble. Their work is very much a moral one, and we havo plenty of intelligent testimony to their well doing in this way. Women teachers havo done as well as men, and in some qnarters are preferred, having less inclination to enter politics. I know of hut three graduates in politics.

Those teaching in lonely, remote places need encouragement, and to quite an extent have been supplied with reading matter from onr Reading Room, and directly hy friends in the North. Tho *Educational Journal* of Virginia has been sent to nearly all, and with other papers, hns given much aid and comfort. The entire timo of one teacher could he profitably employed in corresponding with gradnates. Their appreciation of the good they got here is most encouraging. They all seem to have a lively gratitude for it, an enthusiasm for Hampton, and a sense of duty to their people.

I have alrendy stated that ninety per cent. of graduates have engaged in teaching.

I do not consider those temporarily in other occupations as lost to their people. The schpol money famine of 1878 sent many out of teaching into other pursuits, hut they will gradually return.

THE EDUCATION OF INDIANS.

Onr work for Indians originated in the need of it for seventeen young Indians, who, after three years' sojourn with fifty others in St. Augustine, Florida, as prisoners of war in care of Capt. R. H. Prntt, U. S. A., hegged for an education, and could get it nowhere but here.

The need of training girls to make the work complete led to an increase, till we have now forty-seven hoys and twenty-one girls. They have arrived nnd left as follows:—

Arrived.

The Florida boys have all left hut one: the rest are at their homes; one has relapsed into harbarism; tha rest are doing well.

There was some difficulty in getting girls, hut none as to hoys, and in spite of our efforts there is not yet the right proportion of girls. With this race co-education is most importsnt.

We are now assured that from one agency alone (Cheyenne River) our school could be filled with girls. Hundreds of hoth sexes are eager to come. Not one is here hut hy free choice and the consent of parents. Indians are great letter writers; the correspondenee of our pupils has had an important influence on their friends at home.

The result of fourteen months' edueation is shown in several groups representing parties of our students as they appenred on their nrrival in November, 1878, and in Jnnuary, 1880. These have been heliotyped, and are sold. One set will be given ns a premium to each one who shall subscribe to the SOUTHERN WORKMAN (one dollnr a year).

The majority of our Indian pupils have now been under instruction from Novemher, 1878,—aineteen months. The chief trouhla is with their health. Out of ninety-six, there have been seven deaths; in all cases but two the disease, consumption, was hrought with them, and their friends at home were not surprised. One chief, on hearing of the death of his ndopted hoy of whom he was very fond, called his people together and said, "If only one sent from this tribe to Hampton come hack to us, it is all right." Eight have heen sent home for ill health, of whom three have died. Many who came last fall were seriously injured hy exposure on the way. There has heen an acclimating process, and a holding their own, with a few exceptions. The recent hot weather has heen unfavornhle to them, in consequence of which tha hours of study and lahor have heen temporarily cut down.

Some experienced teachers and army officers propheay a relnpse of educnted Indians on their return to their homes, from opposition, ridicule, and shock at the old life, and from the force of circumstnnces. By their studying one-half of the day and working the other half, hy being huilt up in ideas and in working skill and hahits, and hy a radical change of the inner life, we believe they will, as a whole, stand tha test of home. But no little care must he tsken when they go hack, that favorahle arrangements shall he made for a start in life.

Their studies are rudimentary; teaching is chiefly hy the object method. They are now rending simple stories, are eager to learn, and most interesting as pupils.

In work they are alow, hut, as a rule, willing, and have mada satisfactory progress. In the Indian workshops the following articles have been made: A one-horsa cart complete, and quantities of spokes and other materials used in wheelwrighting; a variety of amnll nnd useful articles of blacksmith work; all the wooden tnhles used in tha school, and many articles of woodwork; all the tinware needed hy the school; most of the shoe-mending, and a few pairs of shoes. They have replaced broken window-panes, and done many amall johs in painting and other mechanical work. They have, nnder direction of a carpenter, hnilt a two-story carriage-house, 24x50 ft., weather-hoarded and shingled.

The farm sqnad has worked regularly half a dny, cultivating the various crops.

The girls have had instruction in household industries, washing, ironing, and cooking. They are learning to make nnd mend their own clothes.

Instead of receiving clothing as fast as it was worn out, the hoys have heen put on wages, out of which they are expected to purchase their clothing; there is soma waste, hut tha consequences of any folly nre sure to he felt, and a valuahle lesson in the use of money is thns given. Putting men on a manly footing is the best way to promote manhood. This fact is at the hottom of any success with the weaker races of our country.

Places for the summer, in Berkshire Co., Mnss., have been secured for twenty-five Indian hoys nnd girls, each one in a separate home, to work out his living expenses under the care of kind and excellent people, with whom they will learn our language rapidly and get a three and a-half months' drill in practical living and working, as valuable, I think, as any school experience. Their health will be improved hy the change. The steamboat and railroad companies have generously granted reduced fares. On the journey, a day will be given to sight seeing in New York city, and perhaps on the return, in Boston.

Three years at Hampton will, I helieve, fit Indians for a simple life of lahor in their own homes.

Our sixty-eight Indians are maintained as follows:

By private charity.....	6
By Government aid ($150 per year) and private aid (from $50 to $70 per yr.)	62

The regular school charges are as follows:

Board, fuel, washing clothes, mending, lights, medical attendance, &c., at $10.00 per month, 12 months.....	$120
Tuition (pro rata cost of education of each student of the school).....	70
Clothing.....	00
	$250

At the rate of Government payment, $150.00 a year, there is, after allowing $30.00 per year for the work of each Indian, an annual deficit. This is met hy individuals and societies, who provide for clothing from $50 to $60, or n scholarship of $70.

The American Missionary Association of New York has donated $60.00 a year for each of the Fort Berthold boys. Friends in the North and in the South have cordially responded to the need. The Episcopal Conventions of Petersburg and of Portsmouth, Va., have each contributed $70 to aid Indian youth; twenty-six are from reservations under Episcopal care. Many smaller contributions have come from Snnday-schools nnd churches in Virginia, and a most generous nnd kindly interest haa heen shown hy the people of this State in this cause.

With a $70 scholarship added to the Government $150, making $220 in all, the school is satisfied; the halance heing offset by their lahor, which the first year is of trifling value, the third of considerahle value. Indian pupils require more teachers in proportion than other students; they wear out clothing rapidly, and are on hand the entire year.

A right public sentiment is half the hattle with both race questions: our appeal to the heneyolent will result in a wide-spread nnd intelligent interest in Indian civilization.

The amount paid by Government last yenr, $167.00 for each student, was nrhitrarily, nnd nganst our protest, reduced last July to $150.00 per year hy the late Commissioner of Indian Affairs, hut for the snke of the cause, and for the good effect of private aid, it is cheerfully accepted. Tuition, building and outfit for the education of Government Indinns has heen tho work of charity. For building and outfit we have already expended $14,054.11, all the gift of friends, besides raising over $3,000 for other expenses.

With tho Government treaty pledges for Indian education, still nnfulfilled, and in view of its outlay in Indian wars, cutting down prices as above indicated does not seem worthy of the nation. It is applying economy at the wrong place.

The need of an improved public sentiment is evident.

It has been proposed, hy Northern friends, to enlarge our work for Indian girls hy erecting for their benefit n huilding which shall cost, complete and furnished, $15,000, to he owned and managed hy the institution. A heautiful site has been kindly given hy a lady friend and benefactor of the school, adjoining tha school premises on the north.

The Boston Committee on the Ponca Indian Case, under whose auspices Mr. T. H. Tibhles and Miss Susette La Flesche (Bright Eyes) have recently been lecturing, desire, through a series of lectures hy them to secure the necessary funds, the effort to commence next September. If successful, the building can he commenced in October, and finished hy Jannary. Thus, at least, fifty more Indian girls could he educnted. The Secretsry of the Interior has expressed his readiness to send from the agencies the girls at the rate of $150 per year apiece. It is understood that, under present legislation, no more can he allowed. Charity must provide the halance. It is for the friends of the Indians to decide whether this increased help for them shall be provided.

There will be no disadvantage whatever to the Institute in this effort. Our work for colored people has steadily grown since Indians have heen here. The elevation of the Indians is clearly possible and is dependent upon the will of the people. Their failure will be more the white man's failure than their own. Sending them to a Negro school is like putting raw recruits into an old regiment. The examples, ideas, language, etc., at Hampton, are a constant and powerful educating influence; an atmosphere which they hreathe.

ACADEMIC.

The academic year, from October, 1879, to close June 16, 1880, has been, so far, encouraging. The untoward event of the year was the hurning of Academic Hall, on the night of November 9, 1879, which has not, however, proved a serious drawhack. It is to he rehuilt on the old foundations with the insurance money, and will he greatly improved in arrangement.

The class about to graduate is, I think, better fitted to teach than any previous one, drill in teaching having continued throughout the year at the "Butler School", which, with its average attendance of about 200 children, is an important auxiliary of tha Institute; making, in all, 500 youth under instruction on our grounds. I regret that we are unahla, for want of money, to establish a Kindergarten School. We ought to show the right way from the beginning. The "Butler" school house needs re-shingling, and some internal repnirs, which will greatly increase its usefulness. By finishing off a lecture room a series of cheap and good lectures could he given to the large and thrifty neighborhood of colored people, and a night class for adults could he opened, though tha colored adult has as a rule lost his former enthusiasm for knowledge.

The corps of teachers was never more satisfactory. The course of study has not materially changed. The mental outfit given here is sufficient for the objective point of the institution — well trained teachers to lift their people to a plane of intelligence that shall qualify them for their duties as free men and citizens.

I think we should, however, work steadily towards scientific studies for a certain class. There is no special scientific work whatever for the colored people. The tendency is to, and their preference is for, the ancient languages. I have seen no signs of a desire for science; hut helieve in its value for them in certain cases and their capacity for it. We ought to hava a good chemical laboratory in a separate hnilding. Practical experiments would hnve a most stimulating nnd happy effect. Tha true spirit of investigation, now rare among them, would be encouraged.

I wish we could have a teacher skilled in the art of physical culture. Both races would he benefited hy attention to their physical education nnd development. Bnt our means do not permit this.

object, we give our readers the result of an use to go to school, but not very much. Al-

With what was rescued from the burning building, and contributions from friends, the library and reading room have been of unusual benefit to the school. The extemporized room has been resorted to by students who, with the help of a teacher, have read and investigated as never before. Although crowded in a small space, they have worked busily and quietly, and justified the erection of a special building for a library. It could also provide offices for the Principal and Treasurer, and cost not over $4,500.

FINANCIAL.

Our financial problem is the maintenance, for eight and a half months, of 300 boarding students, including clothes in part, and of 28 officers and teachers (9 gentlemen and 19 ladies); 150 of the boarding students, with some officers, remaining on the place during the three and a-half months' summer vacation. To meet the entire expense of a civilizing, uplifting, incessant work on the whole circle of life, for hand, brain and head, we need from $35,000 to $40,000 a year to pay current expenses, not counting students' cash payments, which on their personal account does not exceed $3,000 a year. Their labor payment, of say $18,000 annually, is *bona fide*, but subject to large discount from its excess above our needs, and from its quality as that of inexperienced youth.

For annual support, the Institute rests for one-fourth, on interest on Agricultural College Land Fund paid annually by the State, $10,000; for three-fourths, say $30,000, and for all building, improvement and endowment funds, on the public.

To get this money, the Institute pays the traveling expenses of the Principal on two, annual, three or four weeks' trips North, and those of one of its trustees, besides $500 a year to him. Our support comes, in general, from the Eastern States.

The State has paid nothing of the $5,000 due the 1st of January, 1880; the next payment will be due July 1st. We can get no assurance as to when the money will be paid. At this rate, the school, when it closes, June 16th, will owe very nearly $10,000, including salaries due teachers.

It is, however, clearly the thing to go ahead and plan full work for another year. I think the teachers will take the risk. I have never doubted that good, wise work for the Negro would be taken care of.

I know very little about State finances; they appear to be in a bad condition.

Northern aid comes in scholarship donations of $70, which pays the pro rata cost of education of a student, or tuition, leaving him responsible for his board and personal expenses, paid for chiefly in labor; and in donations of from $10 to $500, chiefly in sums of $50 to $100. Occasionally, larger gifts are received. The general donation account is quite as important as that of scholarships, but less popular.

There has been a moderate increase in contributions from the North this year. The signs of help from that quarter are cheering. Confidence seems to be growing as the school is better known. The unusual influx of Northern visitors to The Hygeia Hotel at Fort Monroe has been a help, having given many an opportunity to see for themselves.

ENDOWMENT.

I have for several years urged the need of an additional endowment fund of not less than $200,000, to place this School on a more solid foundation, and permit the exertions now required to raise money to be devoted, in part at least, more directly to the welfare of the people for whom we are working.

SPECIAL NEED.

There is immediate need of a young men's dormitory, and of suitable accommodations for the Printing-office and Knitting-machines—both important industries, now in temporary quarters and objectionable where they are.

A three story building 32x110 feet, divided in the middle by a brick fire wall, to cost not over $7,500, would provide for both industrial departments, and properly accommodate thirty-five students. The present literal "stowing" of our men is at the expense of the best habits and ways of living.

IN GENERAL.

The military department, in charge of Capt. H. C. Romeyn, U. S. A., Commandant, has flourished; the students have improved in bearing through drill. I regret their inability to furnish themselves with uniforms throughout. Requirements in this matter might be more stringent.

The officers' (student) court, under the care of the Commandant, has taken cognizance of many offences and administered much wholesome discipline. Self-government is better, so long as it is wise, than that of school authorities.

Mr. George C. Rowe, of the School Printing-office, has had charge of the temperance work among the students. One hundred and sixty students are already enrolled as members. The importance of this movement is seen in the fact that in the little town of Hampton alone there are forty places where intoxicating drinks are sold, and are largely patronized by the colored people. A similar state of things exists throughout the South. Not so much hard, as steady, constant drinking is doing incalculable injury to the freedmen of our country, and a strong sentiment in this matter should be encouraged in their schools. Mr. Rowe is well qualified for his work.

I regret to inform you of the resignation from ill health of the Rev. John H. Denison of the Bethesda Church, who has in a short pastorate done much for the School.

I have to report the death of the Hon. O. M. Dorman, for many years a member of the State Board of Curators for this Institute, and to announce the appointment by His Excellency, Gov. Holliday, of Gen. R. L. Page of Norfolk, Va., in the place of Judge Dorman. Relations with the State at large have been uniformly pleasant. Our work is better appreciated as it is better understood.

For accounts of the various departments of the school I refer you to the Reports of the Treasurer, Farm Manager, Commandant, Manager of Indian Workshop, of Mr. Robbins, in care of Indian boys, the Manager of the Industrial Room and Engineer.

Respectfully submitted,
S. C. ARMSTRONG, *Principal.*

ON MONDAY following the Anniversary Day at the Normal School, the Principal started for a summer trip to the Sandwich Islands, the home of his birth, where his mother, widow of the Rev. Dr. Richard Armstrong, one of the earliest American missionaries to the Islands, still lives, active in good works. General Armstrong has not seen his old home for over twenty years, and in this trip whose refreshment he needs after the labors of the last twelve years, his many friends will wish him much enjoyment, and a safe return.

He is to be at home again in September. Meanwhile, all business letters sent to him at the school will be promptly attended to as usual.

INDIAN SENTIMENT ON EDUCATION.

A paper that ought to have better improved its opportunities for information, *The National Republican* of Washington, published in a recent editorial against the compulsory education laws in Indian Territory, the sweeping assertion that "Every blanket Indian looks upon the education of his child in a white man's school with the same feeling as did the Jewish father when his child was torn from him by the Spanish Inquisitors in order that it should be educated in the Jesuit school. There is not, we believe, a full-blood Indian child now in a Government school with the free consent of its parents. Duress of some kind has been applied in order to obtain them, and the discontent thus engendered has been a moving cause of subsequent disaster to more than one tribe, and to the settlers of the West." The editor asks pathetically, "Why should the lives and property of thousands of settlers in Western Kansas be put in jeopardy in order that certain experiments in the education of Indians may be made at Carlisle and Hampton, or even at the agency school?"

Not to enter upon the question of compulsory education for Indians, which these rash statements have nothing to do with, and not that they are worth discussing in themselves, but to let the Indian speak for himself on the subject, we give our readers the result of an interesting experiment made at Hampton with this paper in question. It was taken into one of the evening assemblies of the Indian students, and the statements quoted were translated to them by their own interpreter, with the explanation that it was published in a Washington paper, and the request that they would say whether the assertions were correct.

They listened with great attention till the interpreter had finished the extract, and then a storm of short laughs and grunts, vehement ejaculations of Oh no—oh no—oh no! in English, and equally expressive Dakota negatives—burst out all over the room. When this subsided, one young brave after another arose to resent the idea of *duress* in his coming to school. "I came because my father want me to learn." "I all Indian, I came to school to learn English—I want to come." "My father wants me to be smart—that's why I came." "My father wears blanket—he wanted me to go to school." One girl sarcastically suggested "That white man who wrote that letter to Washington—may he be afraid of Indian."

"Did any one here come without the full consent of his parents? This question was interpreted: not a hand was raised, but another storm of oh no's!

Not to depend entirely on their own statements, they were asked if they happened to have any letters from their parents and friends expressing their feelings about education. A dozen or twenty were brought in chiefly in Dakota, some written in English by the agent or missionary at the dictation of those who could not write.

We give below, translations of some which bear upon the question, with a letter on the same subject which one of the young interpreters, a lad of 14, asked to be allowed to write on behalf of all the boys.

Following these we add a letter received some months ago by the Principal of Hampton from an Indian father in return for a photograph which he had asked for, that he might see the guardian of his children.

They form altogether an interesting expression of real Indian sentiment in striking contrast to the reckless misstatements of it we have quoted. All given below except the young interpreter's are from full-blood Indians.

FROM AN INDIAN FATHER.

CROW CREEK AGENCY, *Jan.* 14, '79.

My Son:—I am going to write you a letter again. I want you to write letters to me often. I am glad that you are trying to learn. Don't run away from the school. It will ha your own good if you learn. Do all tha work they tell you to do, and learn to be a carpenter and a blacksmith. I would like to see how the Indian boys learn. Tha boys down there, their fathers would like to go down and see them. Then they would coma back and tell tha other Indians. Then they would like to send all their children. Learn to talk English. Don't be ashamed to talk it."

Another father writes from Fort Pierre, Da.

"I want you to learn how to be a printer. I want you to learn to talk English. I would like to have you learn to be a carpenter. I would like to go down there and see how you are getting along. If I was down there. If I saw all the boys down there, then I would come back and tell the Indians, and they would be all glad. I hope some of tha boys will learn how to be a teacher when they come back that they can teach the boys and girls. This is the only chance you have. Get all the good you can. This is all I have to say."

FROM AN INDIAN MOTHER.

KESHENA, WIS.

"I am sorry you are not coming home next summer, dear child, but if you like to learn something it is a good place for you. Learn all you can. It will be for your own benefit.

Your affectionate mother,
WAUPAUNO KIEW."

A father writes from the same place: "Try to learn fast, and study hard, so that you will be a smart man. Try to learn the trade of blacksmithing.

A FATHER TO HIS DAUGHTER.

A Christian Indian (full-blood) writes to his daughter from Dakota:

"*My daughter:* I want you to pray God so you can go on thet good road. We always remember you my daughter.

ONE-WHO-LIES-OUT-DOORS."

A BROTHER TO HIS SISTER.

"DAKOTA.

"*My sister:* I want you to learn all you can, and learn something good and God watch you all tha time. I want you to learn something. That's the reason I let you go to Hampton. BULL HEAD."

THE BOYS SPEAK FOR THEMSELVES.

NORMAL SCHOOL, HAMPTON, VA.
May 3d, 1880.

Dear Friends:

I want to write you a few lines this evening. When I was at my home, use to go to school, but not very much. Always my mother want me to go to school all time. All tha Indians at my home dress like white people now. I like to go to school at Hampton, Virginia, very much. I want to see my folks all time, but they want me to learn something about the books, and our fathers and mother want us to know how to work so we can do what we want to do. Our mothers and fathers don't afraid of the white people, but they want us to learn something; that is the reason they send us here. I am very gled that the white people trying to help the Indians, and those Indians who know better than the others trying to help those others who don't know anything. I haven't anything to say now, so I must close writing.

From your truly friend,
DAVID SIMMONS.

AN INDIAN FATHER TO HIS BOY'S TEACHER.

YANKTON AGENCY, D. T., *Jan.* 26, 80."

General Armstrong—

My Friend: You got my latter, and you answered it, and when I saw your letter, my heart was very glad. But when I saw your face in it, I was most pleased of all. Then I made a feast and called the parents of the children that have gone to school. They were all so glad they passed it round and each one *gave it a kiss.* So now we have all seen you and it seems as if we can now trust you to take good care of our children. Perhaps you don't know that Indians think of their children a great deal, and don't know how to have them out of their sight one day.

So now, my friend, you know how I feel about my two boys, but I can trust you now, and I want you to look after them and take good care of them, and if anything happens to them, I want you to tell me soon. I shake hands with you.

Your friend, FAT MANDAN."

FROM A CHIEF TO HIS YOUNG BROTHER.

A full-blood Indian chief writes to his half-brother from Crow Creek.

Aug. 25, '79.

I am going to write you a letter. I never forget you. Try to learn all you can while you are down there. I wish I were young so I could go down and learn too. I want you to learn all you can and come back and teach your brothers. Try to learn and talk English too. Don't think about coming home all the time. If you do you can't learn much. I like to have you write a letter back and tell me how you are.

WIZI—That's I."

WIZI VS. THE UNICORN.

This Wizi is the Sioux chief who, last May, while the *New York Tribune* was elaborating an editorial to prove the absurdity of educating Indians, called his people together and made a speech in which he told them, "If only one of your children should come back to you with a knowledge of civilized life and an education, you should feel fully paid for the loss of the others. Which sentiments are the most elevated and civilized Wizi's or tha *Tribune's* and *National Republican's*, we leave the public to judge.

CAPT. PRATT'S TESTIMONY.

In regard to the question of compulsion and duress, Capt. Pratt sends the following unequivocal testimony:

CARLISLE, PA., *May* 20, 1880.

None of the Indian boys or girls at either Hampton or Carlisle came without the free consent of the parents. So far as I know, no Indian children are held at schools anywhere without this consent. I sent to the Indian Department about a hundred letters from parents on the plains, to children here, showing the parents' earnest desires that their children should have school privileges. I have since been in Washington and found that forty of these letters were referred to the Senate as an answer to Senator Teller's resolution.

Spotted Tail wrote to his son here. "Tell Capt. Pratt he can come now and get five hundred children, if he wants to." Many other letters speak the same spirit. Thousands of Indian children can be placed in schools today, with the glad consent of parents. All that is needed is the opportunity.

Several boys were slipped into the wagons by their parents, after the quota was full, at Cheyenne Agency, last fall, so that when the party reached me at Wichita, one hundred and thirty miles away, I found twenty-nine children instead of twenty-five. I sent back two, but could not resist the pleadings of the other two, and brought them. After we reached Rosebud landing in Dakota, with ninety Sioux boys and girls, last fall, five of the parents desired to take back their girls, and as we wanted only those who came with the fullest consent of their parents, I permitted them to return to their agency.

I could send you many latter from parents, showing the greatest satisfaction that their children enjoy the advantages of Hampton and Carlisle.

Sincerely yours, R. H. PRATT.

LETTERS FROM HAMPTON GRADUATE | and I scarcely have room to turn round, and on | delivering a lecture on the "Fifteen Years Pro- | good, although the weather has been very cold

LETTERS FROM HAMPTON GRADUATE TEACHERS.

HAMPTON'S WITNESSES. A NEW ERA BEGINNING. COLORED PREACHERS FOR EDUCATION. ENTERPRISE IN THE BACKWOODS. HOW THEY GOT THEIR SCHOOLHOUSE. A TEMPERANCE CLUB. "LOOK AT DIS YEER HAT." A DARK PLACE. BIBLES WANTED. FIVE MILES TO SCHOOL BAREFOOT. FROM A TRIO OF WORKERS. A MAIDEN SPEECH. GOING UP HIGHER. NOISY LITTLE C—— MAKES HERSELF HEARD.

Out of the 315 graduates of Hampton, less than 10 per cent have failed to devote themselves to teaching. Scattered all over the lowlands, and through the woods and valleys, of Virginia, and North and South Carolina, and even beyond, their little schools form centres of light and civilization in many dark places. They are doing a very important work in the elevation of their people, and doing it with true missionary spirit, often in the face of much hardship.

Special effort is made by the school to keep up constant communication with these young teachers, both for their own encouragement in their arduous and isolated labors, and for the value of their letters from the field. Written simply to their friends among the teachers, not for show, they give graphic pictures of the condition of the people, more reliable than partizan representations or the hasty glimpses of outsiders.

HAMPTON'S WITNESSES.

Hampton's best witnesses must always be in their good character and work, and next to that, in their loving appreciation of her work for them and their people. The growth of gratitude is none the less beautiful for being a common experience in the development of mind and heart.

One writes, recently,

"If I could have taught the year that I stayed out of school, I think I would have appreciated my schooling more. As it is, I am prond of it. I am glad that my mother ever sent me to Hamptoa."

Another says:

"I have tried to influence some of the parents here to send their children to Hampton, believing that the Hampton system would be the making of them. I read with great sorrow of the burning of Academic Hall. It is a pleasure to see the many friends of Hampton responding to its call, and I hope that Academic Hall may again rear its lofty head on the shores of Hampton Creek, and in the hearts of its students and graduates."

A NEW ERA BEGINNING.

The influence of the ignorent colored preacher in the South is so commonly ndverse to the instruction which must separate their people from them, that it is one of the chief obstacles greduate teachers have to meet, and any change for the better is worthy of note. A young men who has taught for several years since his greduetion, writes from North Carolina:

——, N. C., *Jan. 27th*, 1880.

General Armstrong,

Dear Sir: — As it has been some time since I wrote to you last I thought that you would like to hear from me. As there was not money enough to carry on the colored school in this District the whole session, the school committee thought it expedient to stop my school last fall, and I had to resort to other employment for a living. I opened school again on the 12th of this month, with the promise of getting some money in the Spring.

My School is in much better condition then it was, when I wrote you last. The people seem to be more interested in regard to the public schools than they used to be; even the colored ministers are trying to encourege universal education. We are preparing to hold a Sabbath school union in the neighborhood next July. We expect to have at least twenty Sabbath schools represented in said Union. I truet that a new era is beginning to dawn here.

With a promise to send a subscription for the paper he adds:

I never expect to do without the Southern Workman as long as I am able to work. The more I read it, the better I like it. It made me feel very sad to read about the destruction of Academic Hall—Hoping to hear from you soon,

I remain your Student, W.

HOW THEY GOT THEIR SCHOOL-HOUSE.

A young man who is making his first essay in teachiug in the hackwoods of Virginia writes cheerfully of the people's enterprise:

——, VA., *March 4th*, 1880.

I teach in a log school house about 12 by 15, and I scarcely have room to turn round, and on the settees in my room which are no more than five feet long, are crowded six and seven scholars and some have to eit in each othere lape. This is the first school the people have had in the neighborhood, and it is very fortunate for me that they have a new teacher in a new school. How they came to get a school in this place may perhaps be interesting to you. They had petitioned the board again and again without any effect whatever, so one colored man volunteered, and gave the ground to build the house on, and four or five more men assisted him to put up the building. Several declined to aid, and said it was the school board's business to build the house, so it was, but had they waited for them, they would not have had any school yet. All the colored people about here own their own farms, and have horses and cattle, some own two hundred, one hundred, fifty, and down as low as two acres of land, and raise peanuts and cotton in great quantities. The people now occupy the same land they used to work on during slavery, and many live in their old master's houses. They are very ignorant, as you might expect.

A TEMPERANCE CLUB.

The amount of rum that is used among them is startling. I have had men talking to me about their children, and standing at a distance of three feet, and I would smell the rum as well as if I were in a rum shop. I was talking with with the old gentleman I boarded with about drinking, and explaining evil consequences, when he said that he had been drinking for sixty years, and it had never hurt him, and that he believed God made it for the purpose for which it is used, and he intended to drink the remainder of his days. Then I asked him how much money he had spent for liquor in the past sixty years, when he took off his old hat, that rested on an unusually large head and said, "See dis yere old het? Sir she'd been full up if I had saved it," then I continued to explain to him the misery and ruin rum was causing, when he said "Look hyar chilo I bleves yon is right." The next evening I gave a temperence lecture to my school. On asking the question how many of the scholars drank whisky, I was surprised to see nearly every boy's hand in the school up. Although the girls did not raise their hands, I learned since that they drink. I then asked where they got it, and received the prompt reply. "My parents give it to me." I then began to talk to them about stepping it, and persuaded them all to join the temperance society. I told them if they joined the society they could not drink it at all, when one little boy about twelvo years old rose up and said, "I only drinks a little at corn shuckings and I don't think I could stop that." However I won him over on the right side and thon closed school. The people are anxious for me to open a temperance society. When I first came here, the Baptists and Methodists both wented me to superintend their Sunday schools and there was so much dissatisfaction about who should have me I did not know what to do, finally I agreed to take both schools, so every Sunday I hold school in my school houee, a distance of one mile, and after it is over walk three more miles, and conduct another. Howevor I am getting along very well now, and all is peace and harmony.

I beve now about sixty members of the temperance club, most all of them are my scholars.

I got the pledge from Mr. Rowe Saturday, and have just copied it into the book for signatures.

My next general meeting will be tho third Sunday in this month, then I expect to give a lecture on the ovils of rum. I gave a brief one to my school this afternoon (which we raised to-day to sixty-three) and they seemed to be very deeply interested in it.

I hope I have not worried you talking about the temperance club, so now I will tell you about my school.

I have now over sixty and can not find seats for them all. I think I shall etop a day or two and have my house enlarged, or if it turns warmer come out among the trees, but if I want to correct one while he is out in the mountains he has all chances of escape, for the woods are so thick you can hardly see ten yards ahead of you.

I must here throw in a request, as my schools are greatly in need of Testaments, and other Sunday school booke; perhaps you could aid me in procuring some second-hand ones, as they will fit in very nicely.

We are having an early spring here, the peach, plum, and several other trees are in bloom, and the green grass has begun to peep up.

Hoping to hear from you when convenient,

I am your scholar, R.

A TRIO OF WORKERS.

Most of the studente of Hampton come from the South of course, and their work lies there almost exclusively. A trio of earnest young people, however, have carried Hampton's standard into New Jersey, and are doing good work in their three stations, within a few miles of each other, and cheered by occasional meetings. One of tho three writes of some of their efforts outside the schoolroom, and of hie own.

MAIDEN SPEECH.

——, N. J., *Dec. 31th*, 1879.

My kind frend:

I went to an exhibitiua with P. last night, in which he took the most active part by delivering a lectnre on the "Fifteen Years Progress of the Colored Race." He had a large audience and it tookwell. After he got through, to my enprlee, I was introdnced by the Pastor of the church, as "the teacher from S. and also a gradnate of the Hampton Normal and Agricultural Institute." Although I did not expect to be called on, you know I could not avoid saying somsthing under such circumetance. I had a subject in my mind however on which I had been studying for some time, so I gave it to them. It was this, "A Contrast in Chnracters." I tried to picture out to them two old men, one of whom was abont to end an honored and anccessful life, and the other one to the contrary. I began with them first beginning to fight the battles of this life. Both with the same resolutions, &c. Then branched off by one sticking to his resolutions, &c., through disadvantages, discouragements, prejudices, &c., and the other one by forgetting the motto, "Try once and if you don't succeed try again," finds himself, at last, sunk into infamy, as well as numbers of his associates who had fallen into the same pit by following his example.

This was my first attempt to speak without notes, but I remembered what General Armstrong told us once, and acted accordingly. "Say what you have got to say, then take your seat". The people said they were well pleased with both of us, and extended another invitation to us to assist them in another exhibition which will be given in the church at B., where C. resides, on next Wednesday evening.

I shall go if I can get there because I think this will make a good impression for us. Don't you? C. is to read a piece at this one also. I have not seen her since she returned. I have not been any where except to visit P. He has a large school, seventy-nine I think, in number and they all like him. I have fifty-six and expect more the first of next month.

I am ever most ob'ty yours, T.

GOING UP HIGHER.

The young lecturer referred to in the above letter, not content with successfully passing his first examination as teacher in New Jersey, where he reports the examinntione severer than in the South, has been steadily studying for the higher grades in whet time he could get. He writes:

"At the examination held on the last Saturday in February, of thirty-two teachers, only four competed for the 2d grade, and I was one of the successful candidates. I am now studying to compete for a 1st grade certificate. The examination will consist of ten questions in each of the following braches: Arithmetic, Algebra, U. S. Constitution, Theory and Practice of Teaching, U. S. History, School Law of New Jersey, Book-keeping, Grammar, Orthography, Reading and Penmanship, Philosophy and Physiology. I know the undertaking is great. For the 2d grade my average was 81."

COLORED SETTLEMENTS IN NEW JERSEY.

The last letter from the trio gives a pleasant picture of one of the stetions:

——, N. J. *April 12th*, 1880.

Dear Generni,

My school is one and a quarter miles from my boarding place and I enjoy the walk. I am boarding in B—— and teach in B—— or C——. All of the inhabitants of the above named places are colored. The village (only little village) is inhabited by a very industrious class of people; most of them own their honses and some have cows and horses. Some of the colored men farm, but do not own their farms, they work on shares. A white man will lease his farm to a colored man, and he will work on it, giving the white man half. My school during the winter was very large, having seventy-nine enrolled and a daily attendance of fifty-nine and, sometimes sixty-five. I had five boys that are eighteen years old. I have a very comfortable school house with twenty-two desks, a nice stove, five black-boards and a clock. It is decorated with maps of different countries, and a very large writing Chart, all sent me by Mr. B. of Boston. The children at first were very unruly, and I had to be very severe with them; but by persnasion and using the ferule a little I brought them over, and I am glad to say that I get along splendidly with them.

The citizens, both white and colored, speak in the highest terms of me, and say that I have done more good work, and the children have learned more under me than any teacher that they have had. Of course I feel proud to know that I am doing something for my race, I feel as though my dear teachers would be pleased to hear this of *noisy* little C. I never thought that I would like teaching as well as I do. My Dist. Clerk has asked me to return another year, I have not as yet decided. Please send me a Catalogue. I wish you much success in the rebuilding of "Academic." Many thanks for the Educational Journal that you have been so kind as to send. Love to all of the teachers.

Yours truly, C.

Md. *Dec.* 24, 1879.

My Kind Friend,

I received the bale this morning. I must say that it was a very nice Christmas present, and I found many articles that will be of much comfort and great use to me. My response would have been sooner than now had I not been waiting to receive the bale. We send many thanks to you for so nice a present which will afford much comfort as well as pleasure. My school is doing well and my attendance is good, although the weather has been very cold and disagreeable here. I will give a little exhibition or entertainment about the last week in January for encouragement. I have had several Map lectures and they were very interesting. I am going to have a lecture on the maps of South and North Americas at the time of the exhibition. The exhibition will consist of the daily exercises, such as lecturing spelling, reading arithmetic, &c. My object in having it is to show to the parents of the scholars how their children are progressing. I am teaching in a Methodist vicinty. Since I have been here I have aroused them to keep their children in both day and Sunday school. I teach Sunday school every Sabbath and I think both parents and children are becoming very interested in both schools. One of the white gentleman at ——has been visiting my school quite often and has shown quite an interest in my school by reading and lecturing to the children and parents. I will give holiday for Christmas which will continue till the first Monday after New-Year. I presented them all a Christmas present yesterday.

I sent you a letter some time ago concerning two books I do not know whether you received it or not. The colored teacher will be allowed to take an examination soon and the examiner told me all that I need to study was Geometry, Trigonometry and Physiology.. I would like to get Davies' Elements of Geometry and Trigonometry and Dalten's Physiology. If I am successful in the next examination it will enable me to get a better salary. A merry Christmas and happy New Year to you.

I am respectfully, M.

——, VA., *March* 22, 1880.

Dear General:

Through your request I wrote you one letter concerning tho debt question and have not written to you since; but think now it is time to let you hear from me and know what I am doing as a new beginner.

I have now finished fifth month and thought I should have to stop—but I am informed by my Superintendent that the school board has prolonged the term one month. Therefore shall not finish until the last of April.

As to my success—I have had a fair one under the peculiar circumstances which I had to encounter.

My children, generally, are anxious to learn—and some credit me for my pains—To give you a little understanding concerning the peculiar circumstances I mentioned, is to say that my house has been closed quite a number of times and some of these times would last two weeks.

This and the old teacher's interruption have impeded me some, yet hope to make a smooth run this month.

The Superintendent seems to be very much pleased at the success of the Hampton teachers—I visit him often.

In fact schools are promising around here. All the colored schools, (excepting three) are taught by colored teachers, and the Superintendent says he is going to have more colored teachers next year. Three of my classmate teach near me. Doing very well.

In connection with the day school I have a Sunday school which is doing fairly. Enrolled 58, daily attendance 30.

Shall make it a point to lecture upon several subjects before leaving. My people are doing fairly well around me. Have had schools nine years. Some own a great deal—accumulated since the emancipation. The general sentiment is to buy when they can, and crop for self.

There has been no trouble to get money, when due, where I am teaching yet. Shall pay balance in a few months.

I am sure you will be pleased when I tell you the teachers in this county held an institute at Manchester last week—commencing Wednesday continuing until Thursday eix P. M.—Longer if we had desired.

Well sir it was a capital thing. Dr. Ruffner, Prof. Vassar, the colored teacher of Methematics in Richmond institute, Prof. Jones, the instructor in Grammar of the same place, a gentleman by the name of Oliver; in short we had the benefit of the experiences of many of the leading educatore from there. They are to be continued. Hoping all are well,

I am yours gratefully, B.

——, VA., Feb. 3, 1880.

Dear General:

I write to thank you for the "*Educational Journal.*" I read it with much pleasure and find it valuable instruction for me in my work. I am still at work, doing what I can to elevate the rece. I have a large school—last week it numbered one hundred. I had more work than I could properly attend to, I asked my Trustees for help; at first they seemed inclined to refuse me, saying there were four colored schools in Franklin District and they thought that was about all they could do. I invited them down to my school; they accepted the invitation. In a few days my Superintendent with two of the Trustees called. They laughed and asked if I had a big meeting; and agreed with me in saying that I needed help. They said they were not able to hire a regular teacher, but would give $10 or $12 for some one to help me if I could get any one for that. A young girl who had been one of my pupils was examined and employed by the Board. With her help I find plenty to keep me busy. Yours ever, D.

INDIAN PROGRESS.

churches begin their work among them, but home, but we know that every Indian child who come in close contac with them, who

at Hampton is here by the free consent of are indeed their neighbors, are not heeded;

INDIAN PROGRESS.

The following report is by a colored man, a graduate of the Hampton Institute. His work as a teacher, his skill and success in managing Indian boys, and in their mechanical training, entitle him to the highest praise.

The Negro has been, in many ways, an important ally in our efforts for Indians.

I am pleased to say that, with few exceptions, the progress of the Indian students at Hampton has been steady, in all the departments that have come under my observation. In the school room, their aptness will compare most favorably with the children in any public school of the same grade. The best mental stimulus has been work, which has given a keen relish for all that we put within their reach.

From half-past eight, A. M. to twelve has been given to class-room recitations; from one P. M. to five in the winter, and to six in the spring, they have been trained in farm work and mechanics.

In dividing the work among the boys, the first consideration was to have the Agencies represented by as many different trades as possible. The second consideration was the boy's physical constitution, and in what trade he would be most likely to excel. In a few instances, the boy's taste has been consulted, when we believed him capable of making an intelligent choice, but as many would choose to work at some trade because their particular school friend did, the general assignment of work was made without consulting them.

The following list of Agencies will show the present assignment of work.

	Carpenters.	Wheelwright.	Blacksmiths.	Shoemaker.	Engineer.	Farmer.	Tinners.	Saw Mill.	Waiters.	Janitors.	Total.
Crow Creek, Dakota Ty.....	1	.	1	1							3
Cheyenne and Arrapahoe, I. T.	1										1
Cheyenne River, Dakota, Ty..	1			1	2	1	*1	1			6
Cherokee Nation, Indian, Ty....	1										1
Fort Berthold, Dakota, Ty.....	2	1	1	1	1						6
Kechena, Wis.....	1	1			2						4
Lower Brule, Dakota, Ty.....	2	1		1		1					5
Pawnee Agency, Indian, Ty....	1				1						2
Standing Rock, Dakota, Ty.....	1				1	*1					3
Shawnee Town, Indian, Ty.....	1								1		2
Yankton, Dakota, Ty.....	3	1	1	1	3	*1*1	2	1	2	1	16
Total.....	16	2	2	1	5	1	4	3	2	2	4	47

*There are only six boys from Cheyenne River, two from Standing Rock, and thirteen from Yankton; the waiters and janitors are assigned other work besides, which has been reported.

Many of the boys show a natural taste for their trade, and by persevering I believe that they will excel.

The Indians have charge of the cleaning in the Wigwam, under the supervision of a colored janitor; their work has been very satisfactory on the whole. The effect has been to cause the boys to get down on their knees voluntarily, and scrub the floors of their own rooms.

Disciplinary power has been exercised for the best good of the boys, by punishing in the line of the offense. There is reason to believe that this course has not been without good results, as many of the most promising boys are those who have been severely disciplined. It takes hard rubs to bring out the hiddea beauty in the character of some, but it is worth more to the world than the costliest gem.

WAGES.

After a year's study of the Indians, it was thought proper and necessary to pay them in cash for their labor. The amount of wages is based upon the market price of the goods they will need, and the number of hours they work, rather than upon the value of the work, although its quality is constantly improving. It is believed that large wages to begin with would demoralize them; they will have to study economy to make both ends meet; the aim of the school is to make them feel that there are future as well as present needs, and so guard against any foolish expenditure of money. We realize more and more that the most pressing need of Indian youth is a practical education. With it they may hold their own against the race which is pushing them from point to point; without it, they will inevitably go down. Unless education is made to mean more than brain culture, it may yet prove the curse of the Anglo-Saxon race. Thousands of young men and women who leave our high schools, seminaries, and colleges all over the land, graduate with a degree higher than their social surroundings; the majority of them return to their homes unprepared to put their philosophy and literature into every day practical life; with them life becomes one continued grind, and the long list of intelligent criminals is only a sad sequel of it. The education which will nerve and strengthen a man for his calling in life is the most practical and is the most needed today.

It has always been thought by some that Indians dislike to send their children to school; this may have been true before the churches began their work among them, but they so thoroughly appreciate the value of education, that when Capt. Pratt went to Dakota to bring Indian children to Hampton, he did not take what he could get; there was a choice of material, and to-day, we are informed that there are thousands of children on the upper Missouri, waiting to come to school. I believe it would be a hindrance to undertake to force the school system upon the Indians generally at present; there is not yet sufficient intelligence in the tribes to give moral support to the measure, and nothing would be more bitter than that which they were compelled to take. Compulsory educational laws should be made to meet the demands of a tribe; then they would only be shaping the opinion and will of the people. The more we look at the Indian question in its various phases, we see how little the Indian is consulted; he is directed not advised; it is his duty to us, not our duty to him. The Indian problem which the people of the United States have so long been trying to solve, may be briefly stated thus: When shall we be able to teach the Indians to surrender their lands and their houses to us, when we want them without fighting? Its a singular fact, the American people require more Christian charity from the Indians than they themselves are ready to give.

We are often asked if the Indian students will not return to their blankets and their old life. I should not be at all surprised to learn that some of them put on blankets when they go back. It would be no proof of their degradation, as there are many noble and manly hearts beating beneath the rags that cover them; the outer covering is not a true guide to the inner dress. Necessity, not choice, may drive them to it; they must return to the surroundings, their former life, but whether they will sink to its level depends very much upon the success of the work which we have begun here; upon the amount of practical knowledge they will take home with them; upon the strength of their own character, and upon their friends at the other end of the line. The experiment does not end with the school life, it is then that it actually begins. This is only the preparation for the effort. The question is not can the Indian learn, but will he put his knowledge to practical use? The answer to this question depends upon the future policy of the Government. The whole man, to put his knowledge to the most practical and profitable use, has a choice of location; he goes where his services are most demanded, and where he can get the best returns for his labor. Are these Indians to be bound to get their living on one reserve, or will they be left free to choose a home for themselves?

If they are cramped within the confines of the Agency, and unable to find work, they will inevitably fall a prey to those vices to which the discouraged and abandoned in our Eastern cities and towns easily yield. It will be nothing worse. We dare not predict the influence which these young men and women will have over their people on their return home, but we know that every Indian child at Hampton is here by the free consent of its parents and guardians and hundreds of others are waiting to come, so they are going to a people struggling to rise.

A great hindrance to the most effective work among the Indians is the demand that they shall be rapidly civilized, and the return of the few to the wild way of living is said to be the tendency of the race. What shall we say of those who fall from the highest level of our Eastern civilization; the contrast from good society? Does it prove the depravity of the Anglo-Saxon race? After having thoroughly whipped a tribe we wonder why they don't get civilized, and we bemoan the hopeless condition of "Poor Lo." We want to make savages Christians in a day, and after a short trial we see that it cannot be done. Christianizing is not the work of a day or a year or a spasmodic effort in any direction, it is a continued and constant effort. The Christian church has been 1800 years making it; yet to-day more than half the world are heathens.

The condition of the Indian is unlike that of any other people in the world to-day. He is not only banished from the best contact with civilization, but he is hated, hunted, envied, and yearly the boundaries of his place of exile are growing smaller; his rights are conferred by a superior power, and are so limited that his gun is his only defense,

MR. BERGH AND HIS WORK. (See page 62.)

who come in close contact with them, who are indeed their neighbors, are not heeded; instead, on the contrary, they are scorned. Instead of being improved by this contact, the Indian has really been rendered worse for it, adding readily the vices of his pale-face brother to his own—a combination which cannot be excelled in the history of the world in the line of downright meanness. The same article goes on to say: "They are utterly unlike the Negro * * * who, after associating with the Caucasian, soon learns to adopt the ways of the white man, and to live after his fashion, cultivating the arts of life and adopting the manners and customs of his fellow-being. So to a great extent with all other races except the Indian."

According to the last report of the Commissioner of Indian Affairs, there are now in the United States, not including Alaska, 253,897 Indians. Of this number, 138,046 have adopted the citizen's dress. There are 44,731 who can read. Is the proportion among the whites as good? Twenty-seven thousand eight hundred and eighty-four houses are owned by the Indians; that is on an average of nine persons to a house. This would not sound bad to an occupant of a New York tenement house.

The following statistics do not include the five civilized nations in the Indian Territory:

No. of acres cultivated by Indians,	137,056.
Rods of fencing put up,	169,329.
Bushels of wheat raised,	328,687.
" " Corn "	643,286.
" " Oats and barley raised,	189,054.
" " Vegetables "	390,698.

They owa 199,732 horses;
2,872 mules;
68,894 cattle;
32,584 swine;
863,525 sheep.

They have sawed 4,703,292 feet of lumber; cut 75,167 cords of wood; burned 50,000 bricks; made 78,500 shingles; made 444,500 lbs. of maple sugar; and 1,100 lbs. of hatter.

If these facts do not speak loud enough of Indian progress, I will add that the statistics show that the quantity is increasing from year to year. If "the Negro lives more after the fashion of the white man," it is because he has been brought up among them—his home has been with the American people since he first landed here; but the Indians have been kept from all of this. The march of the white man means retreat for the Indians; they are kept on the confines of our civilization, and their accomplishments are in keeping with their surroundings. The Cherokees at their old home in Georgia show best what the Indians can do. Who will ever justify the act that removed them? The question that the American people have got to face sooner or later, is, Shall the Indians be allowed to assimilate and the agencies be broken up?

Freedom of person is of infinitely more value than freedom at the polls. Why would it not be equally advisable to set apart different states and territories for the different nationalities, so that when the foreign emigrants come to our shore we could send them to their national state? No one would doubt that such a policy would be the beginning of the dissolution of the Union; there could be no common country and no common laws. The Indians should be allowed to assimilate with, and become a part of, our Nation's life. Are there always to be national prison pens for them, or will they some day enjoy those "certain inalienable rights?" It is wonderful how slow the Anglo-American has been to perceive that this Declaration refers to no particular race or color, but speaks of "all men."

In dealing with the Indians at Hampton, we see that they have a warm, sunny side to their nature. Their aim is high, and even if they fail to hit their mark, practicing will bring them nearer to it. They have liberties and rights which we do not disregard, and we earnestly hope that when they leave us they will never give up as long as there remains something good to try for. We are preparing them for home usefulness. We do not flatter or coax them; we are trying to develop a self-reliant manhood and womanhood, strengthen their weak points, and prepare them to resist the degrading charms of savage life. This training is a strong stroke up the tide of civilization. If we can send them back to live just a decent and industrious life, their influence, if ever so small, must be a lever to their people.

It is hard for us to believe that there are those who, with these encouraging facts before them, still express their doubts as to the possibility of Indian progress. It takes a higher degree of civilization than all Anglo

Saxons possess to give up an opinion to which one stands committed, even when he knows it is false. But it is grand to think that neither fears nor prejudice can be a final obstacle to the work. The greatest revolutions in popular opinion which the world has ever known have been the outgrowth of a few strong hearts, that have believed in and have achieved success.

We can afford to wait; the American public cannot be educated in a day any more than the Indian. The people will be ready by and by to lay aside legends two hundred years old, and accept facts as they are. The ideal Indian is dead; the true Indian is living and progressing. It is time to concede that he is a man. Take from him what you will in the scale of civilization, but do not subtract his manhood; it is his by Divine right.

The answer to the Indian question must be broader than his reservation, and broader than his territory: it must be as broad and as long as these United States, with all their rights and privileges. J. C. Ronnine.

ANNIVERSARY DAY AT HAMPTON.

The twelfth year of Hampton Institute closed May 20th with the usual anniversary exercises. Notwithstanding the shadow cast upon the school year in its beginning by the destruction of Academic Hall by fire last November, the general feeling was that its closing day has never been surpassed in interest and satisfaction.

The school was honored by the presence for the second time of the President of the United States and the Secretary of the Interior, and an assemblage of prominent and representative citizens of the North and South. Two Governors of Massachusetts were present, Governor Long and ex-Governor Rice. Governor Holliday of Virginia sent a cordial letter of regret that previous engagements again prevented his acceptance of the invitation. The President was accompanied by his little daughter Fannie, and two nieces, Secretary Schurz, General Whittlesey, Secretary of the Indian Commission, Mr. Enoch Pratt of Baltimore, Rev. Dr. George Ellis of Boston, and others.

The Boston party, numbering over sixty, came under the able leadership of Mr. A. L. Coolidge, on the steamer chartered for the occasion by the Boston Commercial Club. In this party, besides the Governors, were Hon. E. S. Tobey, Postmaster of Boston and President of the American Missionary Association; Mrs. Walter Baker; Rev. Messrs. Munger, Porter, Ahbe and Peckard; Col. E. W. Kinsley; Messrs. J. W. Fields, Henry Edwards, J. W. Devis, Geo. E. Brown, Samuel Little, J. G. Wheter, T. D. Quincey, Frank Wood, S. N. Barbier, and other gentlemen, most of them accompanied by ladies.

Among those present from a distance were also Mr. Chas. Benedict of Waterbury, Conn., Rev. Dr. McCleod of Brooklyn, Rev. Dr. Petton, President of Howard University, Mrs. Patton, Miss M. A. Longstreth of Philadelphia. The steamer *Accomac* making a special trip for the occasion, brought to the afternoon exercises a large party from Norfolk, among whom were Rev. Messrs. E. M. Saunders and E. N. Crane, Mrs. Dr. Armstrong, Charles Sharpe, Esq., Messrs. T. A. Williams, C. Billings, F. Richardson, H. C. Percy, Dr. Santos, Mr. Jacob Reid, Col. Crocker, A. L. Hill, Dept. U. S. Marshall, Mr. Chas. Reid, Mr. R. Denis, and others. Gen. Upton and other officers from the Fort and Navy Yard were present. The Press was well represented, by Mr. Frank Foxcroft of the Boston *Journal*, Mr. Bacon of the Boston *Advertiser*, Rev. J. W. Harding of the Springfield *Republican*, Mr. Arthur Robinson of the Adams' *Transcript*, Mr. H. M. Clark of the Philadelphia *Evening Bulletin*, Mr. Hunter, editor of the Raleigh *Journal of Industry*, (a colored newspaper), and representatives of the Philadelphia *Times*, Baltimore *Sun*, Norfolk *Landmark*, *Virginian*, *Daybook*, and *Temperance Banner*. Many of the leading citizens of Hempton were present as usual, and prominent colored men from Norfolk and the neighborhood. The Trustees of the School present were: Rev. M. E. Striehy of New York; Hon. R. M. Hughes, Norfolk; Mr. Alexander Hyde, Lee, Mass.; Rev. T. K. Fessenden, Farmington, Conn.; Rev. J. H. Means, D.D., Boston; Rev. H. W. Foote, Boston; Mr. Robert C. Ogden and Mr. A. M. Kimber, of Philadelphia; Mr. Z. S. Ely, New York; Hon. Lewis H. Steiner, Frederick, Md.; Judge F. N. Watkins, Farmville, Va. The Curators present were, Mr. Andrew Kevan of Petersburg, Gen. Page of Norfolk, Hon. Jas. M. Daweon of Williamsburgh, Rev. Jas. H. Holmes of Richmond, Rev. Wm. Thornton of Hampton.

RECITATIONS.

The diminished class-room accommodation made it necessary to cut down somewhat the number of recitations, and to invite to these only the guests from a distance who do not have daily opportunities to visit the school. The Senior class, however, was examined as usual, upon most of the studies of the year: algebra, intellectual philosophy, political economy and civil government, and practice teaching. The most attractive to outsiders, perhaps, was the class in practice teaching, with a hundred little primaries from the Butler School for meteriel with which to show the working of Col. Parker's Quincy methods. Model lessons were given by several of the class, which has been practising at the Butler under a Normal School teacher all the year,

The Cooking Class of Senior girls, under a lady who has had charge of the Boston Cooking School, was also a great attraction. Appetizing loaves of bread were exhibited, and the process of making cake, omelet, and chocolate gone through with. The Senior's book-keeping exercises were also on exhibition.

The under classes had recitations in Natural Philosophy, Arithmetic, Reading, Grammar, Physiology, and United States History.

On the whole, the examination compared very well with those of other years, and the class of the "Fire year" need not sit in the ashes.

INDIAN CLASSES.

Three Indian classes were exhibited, in reading, arithmetic and conversation. The Indian children are always excessively shy before strangers, but they made a great effort to overcome their embarrassment and went through their little conversations, worked out simple accounts in United States money, and talked about pictures in a way that several times brought applause. They have made very marked progress this year.

INDUSTRIES.

The industrial department of the school received, as usual, a very special attention from the visitors, who inspected the barn and farm, and workshops, the knitting room and industrial room, printing office and saw mill with great interest, and the Indian boys, in their workshops, under charge of Mr. J. C. Robbins and Mr. Starkweather, on the carriage house they are building, and in the field.

Virginia Hall was thronged at the afternoon exercises which were according to the following programme:

PROGRAMME.

MUSIC.—Normal School Band.

SALUTATORY: ESSAY.....Straight Aims.
Blanche Freeman, Southold, Long Island.

ESSAY.....Town Improvement.
Lovey A. Mayo, Raleigh, N. C.

RECITATION.....Edinburgh after Flodden.
John Kerby, Hampton, Va.

MUSIC.

ESSAY.....Our Past Decade.
William H. Stokes, Lynchburg, Va.

ESSAY.....The Advantage of Disadvantages.
Anna M. Pool, Norfolk, Va.

ESSAY.....The Dark Continent.
Rosella Mason, Matthews Co., Va.

MUSIC.

RECITATION.....Revolutionary Rising in 1776.
Rose Ella Johnson, Hampton, Va.

ESSAY.....My Experience as a Teacher.
Sallie A. Carper, Salem, Va.

INDIAN TALK.....
Bear's Heart, Cheyenne Agency, Indian Territory.

MUSIC.

RECITATION.....The American Flag.
Aaron A. Owen, Warrenton, N. C.

RECITATION.....Union and Liberty.
Nellie L. Clark, Abingdon, Va.

VALEDICTORY: ESSAY.....The Men we Need.
A. J. J. Sykes, Lake Drummond, Va.

MUSIC.

POST GRADUATE ADDRESS.—The Vocation of the Teacher.
H. B. Rice, Coal Valley, Va.

PRESENTATION OF DIPLOMAS,

MUSIC.

The diplomas were presented to the graduating class of 38 by Rev. Dr. Striehy, Secretary of the American Missionary Association, and President of the Boerd of Trustees of Hampton Institute, with the following felicitous address:—

"My young friends: Your Trustees have voted to bestow upon you the diplomas of this Institution, and have entrusted to me the pleasant task of giving them to you. In discharging my trust, I would say to you that these diplomas represent the work you have been doing here. They are not your passports to a life of ease, but the assurance that the conrege and perseverance which have gained them will be your passports to a successful life.

"Go on, then, with '*Straight Aims;*' make your '*Town Improvements;*' Let the progress of your '*Past Decade*' encourage you to enter hopefully upon the work of the next decade. Your race has had a monopoly of *disadvantages;* now see whet you can do with your *advantages.*

"'*The Dark Continent*' calls you, I know. I have had some agency in sending those of your number who have responded already to the call, and I eey to the rest of you, Don't go unless you are fitted for it mentally and morelly and physicelly; in body as well as in mind and soul. If you are thus fitted for it, go! Come back some time and tell us your '*Experience as Teachers.*'

"That was good '*Indian Talk,*' learned at Hampton. Now go home to your people and do as you have talked. Show them the good wey. Let your mother and sister work in the house, and you work for them in the field, and we will say, you ers e 'good boy now.'

"Now in e word, to ell of you—Go and be '*The men*—and womsn—*see need.*' You have done your work here well, and deserve these diplomas which I shell he happy now to give you."

General Armstrong introduced the President of the United States, with the remerk: "It is pleasent, as it is fitting, to call upon the President to address the audience. One who came before him said, 'Let us heve peace.' Under President Hayes, we have had peace."

As the President stepped upon the platform, the whole audience, as by one impulse, rose to their feet with loud eppleuse to greet him.

The President said:—

"I would be gled if it were in my power to speek to ell who heve had any interest in Hempton Institute, if I could express the feeling of every man and woman who has listened to whet has passed this efternoon. Bnt the current of gratitude and encouragement to Hampton Institute flows so strong to-dey that it is herdly for me to add anything to it. I wish, therefore, eimply to thank General Armstrong, the founder and principel of Hempton; these trustees, one of whom has just spoken in terms so fitting; the assistants of Generel Armstrong; these pupils so soon to go out and work emong their people; and assure them of the gratitude, the satisfaction all good people feel in all here done.

"Why, the question deelt with here has from the beginning puzzled our intensest thinkers; has from the beginning been the most difficult, most vital question hefore the nstion: the question, how to deel with these various classes, these different populetions which make up American society. This great territory of ours, with its vast diversity of soil end of climate seems almost to require this vast diversity of population. The main question is how to fuse them into one great, hermonious whole.

"That question Hempton Institute is solving. It is ly deeling with all as children of one great Fether.

"And we may thank all these gentlemen for whet they have done end are doing. They are wiping out in this country sectionalism end race prejudice; and these are the only two enemies Americe has any ceuse to feer.

"We would not undertake to violate the lews of neture, we do not wish to change the purpose of God in making these differences of neture. We are willing to have these elements of our population separete as the fingers erc, but we rejoice to see them united for every good work, for National defense, one, as the hand. And that good work is Hampton doing."

Introducing Secretary Schurz, the Principal said,

"But for the wisdom of the President in the eppointment of Secretary Schnrz, there would be no Indians to-day at Hempton Institute, and if his successor has the wisdom and ability which he has shown, the experiment here in Indian education may be a success. It will give us great pleasure to hear this year, as we did last, from Secretary Schurz."

The Secretary was received with hearty applause, and said:—

"Ladies and gentlemen: I had the honor end great pleasure of attending the examination at Hampton Normel School last year, and then made up my mind that I would, if possible, he here egein, as I am in a sense, as you know, officielly connected with this Institution. And to-day I have made up my mind that though my officiel connection with it is soon to cease, as a private citizen I shall never lose my interest in it.

"General Armstrong has said that hut for me there would he no Indians at Hampton Institute to-day. That is putting it rather strongly—hut, however, I will accept it for the eake of the argument.

"It has always been my view, and the policy of my administration, to treat the Indian question as Hempton is treating it. We have established, as you know, another school at Carlisle, devoted—I mey eey exclusively devoted—to the same object, on the eame plan, and still another has been started in Oregon.

"The American people here come to the opinion thet the sentiment heard on the frontier, thet the only good Indian is e deed Indian, is a sentiment barharous and disgraceful; harharons to the oppressed race of whom it is nttered, disgreceful to those who utter it! [Responses of Yes—Yes—from the audience.] No man can have witnessed what has been witnessed here to-day, attended these school exeminetions, and gone throegh these workshops, without heving come to the conclusion thet there is something vastly better to do with the Indians than to exterminete them.

"The experience I have gathered in treating Indian affairs has convinced me that there are just two things to do—I will say just three things:

"First, Keep good faith with them and thus gain their confidence.

"Second, Educate their young.

"Third, Settle them on lands held in eeverelty, and make these lands their own by the same titles as white men hold their lands by.

"This being done, we mey see the time when the greet body of Indians may, without injury to themselves or to our citizens, be absorbed in the great body of American citizenship. And if all the people and their representative would unite for this purpose, thet time would not be far distant.

"Great doubts have been expressed as to whether the experiment in Indian education undertaken here will be enccessful. I think thet es to one point of the question, it can be called an experiment no longer. As to one point it is e success already. It has been demonstrated that the Indien can be taught to read, write, cipher, end understand; and thet he can hs teught to work.

"There is one point still to he solved. It is the question whether the Indians here and et Carlisle will be capable when they return home of meintaining the level of civilization to which they heve been hrought, and of giving an impulse to their people; or whether they will be overwhelmed egain by barbarism.

"For myself, I am firmly convinced thet as in other respects, the experiment will be a success in this respect too.

"This conviction is hased upon the experience I heve gethered—and which you mey gather in the asme way if you will take the trouble—by visiting the Indians et their homes.

"There was e time when Indian young men ettended Eastern schools and colleges only to sink to their old level. But the present circumstances of the case are vastly different. It is not only that we send the young men heck not eingly hut in groups—not a few, hut meny, to hold each other up,—it is not only thet the circumstances of their training ere different from whet used to be; but it is thet all over the country, the Indian tribes are getting the idee of work. They understend thet the time of hnnting is past, their hufloloes and other geme are disappearing, and thet there is a necessity upon them to learn how to support themselves hy lebor; and they want to learn. Not only are they not opposed to the education of their children, but they will give us thousends of them to edncate, if Congress will only give the money for it.

"One day, soon, e very interesting sight will he seen hers end at Carlisle. It will be, the first Indian Visiting School Board. Within a few days, twenty-five or thirty Sioux chiefs—among them some warriors whose hands were lifted against the United States hnt a few days ego, Red Cloud, end others,—will go to Carlisle end come here, to see their children in these schools.

"So the people of this country will have a demonstration of the interest Indians take in edncetion.

"Permit me a few remarks to the philanthropists here, for I taks it for granted thet most of those who heve come to see this school to-day, have come because they have a philanthropic intcrest in the progress of mankind.

"I heve stated what are my personel viewe and tho line of policy of this administration as regards the Indian question. The Interior Department has elways stood hetween two fircs. On one eids are those frontiermen whose cry is extermination. We don't try to pleass them—hecause we don't went to please them.

"Then, on the other hand, are those philanthropists who, meaning well, think of the Indian as an ideal creeture, which he is not. So we don't do quite enough to please these frisnds—hecause we can't go far enongh to satisfy them.

"So it frequently heppens thet we are ettacked on hoth sides at once.

"Let me say, ladies and gentlemen, this ought not to he. All who are interested in the cause ought to co-oprate in all things in certain aims; in the first place, for education.

"I am extremely gled to hear that in Massecbusetts an effort is about to be made to raise money—$15,000, I believe—for a hall for the education of more Indian girls here. Let me say, thet if this effort is successful, it will he one of the best things Massechusetts has ever done for education, or for e downtrodden race.

"In the second place, all ought to co-operate to induce Congress to act for the encouragement of Indian edncetion.

"To give you an idea of the embarrassments ander which we labor: A few months ago the country was on the threshold of a wer with the Utes. A commission was cent hy the Government to see if peace could he maintained. There was a large class of people who thought it an extrevegant and contemptible thing to try to stop an Indian war; while the President and I thonght that in

every case, and under all circumstances, war should be the very last resort. [Applause].

I think too of those other sweet words of one whom Massachusetts is proud to call her son,

Rhoda Rogers,
Benj. F. Brown,
B. C. Hardwick,

E. A. Enpp,
Mrs. B. F. Brown,
James H. Denny,

and fifty dollars a year for each pupil be contributed by this department for their support. It is proper to add, however, that I can guarantee an ar-

every case, and under all circumstances, war should be the very last resort. [Applause].

"The Commission of Peace was successful. The Ute delegations at Washington agreed to give up a large tract of territory of no use to them if they meant to cultivate the soil. They agreed to become farmers, and become civilized. Ouray promised to use his influence to have fifty Ute children sent to the East to be educated.

"What has happened? Several weeks ago the agreement was ratified in the Senate, but it is hanging fire in the House. And, while any morning paper may bring us news of a conflict on the frontier which would bring on an Indian war, with all its horrors, costing from fifteen to twenty millions, we can't get that measure through the House; and instead of there being fifty Uts children educated in Eastern schools, there is not one, and the plains may be strewed with the bodies and red with the blood of our citizens.

"My fellow-citizens, these are some of the difficulties we have to meet. We have done all we can in this matter, and now look to Congress.

"Here is one point where a healthy public sentiment would give aid most powerful, and therefore I call on the philanthropists of the United States to stand by us.

"Nothing would I commend to your sympathy and co-operation more strongly, than the effort made here. No cause is more worthy than this, and no Institution more worthily represents that cause than the Normal School at Hampton, Va."

The Principal expressed his great regret at the absence of Governor Holliday of Virginia, and Dr. Wm. H. Ruffner, Superintendent of Public Instruction in the State, both of whom had accepted an invitation to the exercises, but had been prevented at the last from coming, sending assurances however of cordial sympathy and regretting their unavoidable absence. The Principal remarked that it was unfortunate for a special reason, the audience being chiefly made up of men of Virginia and of men Massachusetts, some of whom had met in hottle with flashing eyes and faces set against each other in deadly conflict, but who were met to-day on one common ground and for one high purpose, in the interest of education and humanity. It was very much to be regretted that the Governor was "not here to represent the brave and chivalrous people of Virgiaia, who have done all—let me say—that was right for them to have done for this school since its establishment among them.

"I am glad that we have with us Governor Long of the grond old State of Massachusetts, whom I am happy now to introduce to you."

Governor Long responded:

"I find myself to-day in a state of great confusion. I have always tried to prove my loyalty to the State of Massachusetts, especially to her educational institutions. I am a little hit nncertain to-day whether I have been blind-folded, and then dropped, not into Virginia, but into one of the hest of our Massachusetts schools, or whether if I em really in Hampton you have not smuggled one of our best schools into Virginia, and called it Hampton Institute.

"Horace Greeley once said, I believe, that 'the way to resume is to reaume. I have been thinking that this is illustrated here. We Americans are always talking about solving problems; talking about the best way to solve the Southern problem, and the African problem, and the Indian problem. While we have been talking, General Armstrong has solved these problems by—solving them, as is evident by the indications we see here.

"While our hearts are full of the historic associations of the place, they are full to a greater extent of the interests of to-doy. I rise to express my own dclight in behalf of Massachusetts, which I have the honor to represent—to express her unreserved interest in this work. Massachusetts rejoices in this work. Massachnsetts has faith in this work; Massachusetts rejoices that it is done in Virgiaia. Massachusetts stood with her sister in the Revolution. She is heppy to stand with her again in the canse of education and equal rights. Massachusetts believes that God has no favorites among his children; that what one can do, oll can in time and with opportunity.

"So while I bring yon hnt little, I carry back much. I have been struck with the character of the essays read by the graduates to-day, with their hard precticol sense and wisdom. I felt that this war which brought blessing and victory not to one part of the nation, but to the whole, has its victory not so much in the preservation of our Union, nor in the three amendments, but in these walls to-day, in the fruit of these results as we see them in this Institutioe, in a common blessing for our whole country.

"As I look on these representatives of two oppressed races, as I see the work of the Principal and his assistants, as I see the interest in it of his neighbors end of the people of Virginia, there comes into my mind those sweet words, Inasmuch as ye have dono it unto the least of these ye have done it unto Me; and I think too of those other sweet words of one whom Massachusetts is proud to call her son, "'I know not what record of sin awaits me in the other world, hnt this I do know; that I never was so mean as to despise any man because he was poor, because he was iguorant, or because he was black.'"

The Principal said: "Ex-Governor Rice of Massachusetts told me not to call on him—" [Lond applanse, and calls for Governor Rice.] "I think Governor Rice is in for it. Governor Rice represents Boston. When this school gets in a tight place, it always goes to Boston, and is always helped out. I think it is peculiarly fitting that we should hear from Governor Rice." With this nrging, Governor Rice made a short address, saying,

"Ladies and gentlemen, I have learned two things since I came here. The first is that the will of General Armstrong is perfectly irresistible, whether put into this Institution, or in calling a man out to speak. The second is that, if this school goes to Boston when it gets into a tight place, a Boston man sometimes gets into a tight place when he comes to this school. After all we have heard and seen here to-day already, it seems to me that silence would be the most expressive eloquence. This is no time for philosophic utterance. We are too full of feeling to waste time on any other themes than this occasion forces upon us. I can't help thinking that this Institution is not a foundation, not a creation, not the gift of any man or men: It is rather the outgrowth of our times, a new development of the advancing civilization of the age. What do we see here? three races, and both sexes congratulating each other upon their progress and privileges, and we are glad that the stronger are reaching to the weaker hands stretched up to them, and saying come up and we will help yon always. The Generel has said that Boston has given liberally to this work. I am sure that that city and the State feel amply rewarded by what we see here to-day. I feel like saying that all that we have done for it is only the seed corn of an abundant harvest we shall be glad to pour into its hosom if there shall be need of it. For myself, I can say that I am inspired with new interest and shall take great pleasure in communicating it to the people among whom I live, for their interest and sympathy."

A PLEASANT SEQUEL.

Since the Boston friends went home the School has received official information of an incident of their return voyage described as follows by the *Boston Journal*, which has given, for several successive days, full accounts of the excursion, and the school.

The fine steamship *D. H. Miller*, Copt. Solomon Howes, from Baltimore and Norfolk, arrived at Central wharf at 12:30 P. M. yesterday, having on board the party of Boston visitors to Hampton Institute. The party has been favored with uninterruptedly fine weather since their departure a week ago Saturday, and the trip each way was smooth and pleasant. The excursion has been a very delightful one to oil connected with it, and has been unattended with any mishap. On Saturday evening, at an informal meeting in the saloon of the steamer, speeches were made by Governor Rice, Mr. Kinsley, Mr. Tobey and Mr. Denny, and the following letter, which tells its own story, was presented to Mr. Coolidge, the leader of the party:

HAMPTON, VA., *May* 20, 1880.

Albert L. Coolidge, Esq.:

Dear Sir.—The undersigned, your personal friends and traveling companions, feeling how deeply we are indebted to you for the pleasure of this remarkable expedition, desire to give expression to our sincere thanks for your polite and unremitting care for our convenience and enjoyment, and for the generous and unselfish efforts which you have made to enhance the happiness of an excursion whose novelty and variety would under any circumstances render it interesting. This expression, cordial and sincere as we wish to make it, but poorly represents the measure either of your kindness or of our obligations. We therefore hope to give more significance and emphasis to it by informing you that, by our united contributions, we have endowed a three-years' scholarship in the Hampton Institute, to be called the "A. L. Coolidge Scholarship," and we hope this pleasant memorial of our visit to Hampton will thus aid in some degree to carry forward the noble purpose for which it has been established.

With sincere respect and regard, we are

Very truly, your friends,

Alex. H. Rice,	Edward S. Tobey,
James H. Means,	Samuel Little,
Mrs. Walter Baker,	Mrs. F. Tudor,
Moses W. Richardson,	George P. Denny,
Fred'k R. Abbe,	Edward G. Porter,
T. T. Munger,	J. H. Lane,
Jas. H. Danforth,	Chas. S. Kendall,
Henry W. Foote,	Elizabeth C. Davis,
Joshua W. Davis,	William Atherton,
Mrs. Mary E. Atherton,	Miss May L. Atherton,
Edwin N. Bacon,	Gusta E. Bacon,
Susie W. Carr,	Chas. C. Goodwin,
Alice D. Goodwin,	Frank Wood,
Amelia N. Wood,	Mrs. N. Carruth,
Elizabeth M. Little,	Arthur M. Little,
Rhoda Rogers,	E. A. Rupp,
Benj. F. Brown,	Mrs. B. F. Brown,
R. C. Hardwick,	James H. Denny,
Miles Washburn,	Miss M. D. Washburn
Edward W. Kinsley,	Mrs. Edward W. Kinsley,
Miss Adelaide F. Kinsley,	Miss Mary L. Kinsley,
J. W. Field,	Lucie R. Davis,
Marie McKim,	S. M. Barbier,
Mrs. C. L. Bartlett,	Arthur W. Tobey,
Ann Tolman,	Charlotte A. Vinsor,
Arthur Robinson,	Samuel Carr, Jr.,
E. N. Packard,	Henry Edwards,
Frank Foxcroft,	Elizabeth H. Foxcroft,
John C. Webster,	Mary M. Webster,
Fannie M. Webster,	Mary Alba Webster,
Ella S. Thayer,	Mary L. Thayer.

SCHOLARSHIPS FOR HAMPTON.

In addition to this A. L. Coolidge Scholarship, thus provided for by the combined gifts of the party, three-year scholarships of the value of $210 each ($70 per annum) were given by the following members of the party: Rev. F. R. Ahhe, William Atherton, Frank Wood (two), J. H. Lane, A. H. Rice, G. P. Denny, J. G. Webster, Samuel Little, C. S. Kendall, Miles Washburn, Samuel Carr, Jr., C. C. Goodwin, Moses W. Richardson, B. F. Brown, E. W. Kinsley.

These sixteen scholarships, added to the amount contributed in compliment to Mr. Coolidge, make a total of $3,610 from the party; and this smount will probahly be considerably increased by the efforts which the members of the party will make among their friends. It is likely, therefore, that this commencement will be, as one of the speakers on Saturday evening hoped it might be, "a red letter day" for Hampton. In addition to the names above given, several of those in the party are already supporting scholarships at Hampton.

As the *Journal* remarks, the incident speaks for itself, and for its expressive utterance of confidence and generosity, the School returns most heartfelt thanks.

EDUCATION OF INDIAN GIRLS.

The efforts undertaken for this cause in Massachusetts, referred to by Governor Long in his speech, and mentioned in the Report of the Principal in another column, has been commenced by the publication in several journals of the following circular, by the committee in charge of the enterprise, consisting of very prominent and well-known gentlemen of Boston.

APPEAL IN AID OF THE HAMPTON INSTITUTE.

The committee having direction of the movement that has recently been made in this community in favor of securing to the Indians in this country the protection of law and valid titles to the lands ceded to them hy the government, also recognize the fact that their future welfore and progress as a race depend upon the education of their yonth. The results already accomplished at the school at Hampton, Va., onder the direction of the energetic principal, General S. C. Armstrong, afford sufficient proof of the capacity of the Indian for civilization, and the optitude of the children in acquiring such knowledge as will fit them for the duties of life and the privileges of citizenship. The experiment has been fairly tested, and with remarkable success. No one who visits the school can fail to be impressed with the intelligent countenances and happy faces of the children there, and when it is considered that many of these Indians have been taken from some of the most savage tribes, the results seem most surprising. The readiness with which they have acquired the use of our language, the pleasure with which they adopt our habits and customs, their ready and willing submission to authority, and the mechanical skill they exhibit in the workshop, afford most happy promise for the future. To join in the elevation of a race is our high privilege as well as our hounden duty.

This is a work in which we can engage, and the opportunity is now afforded us. Whatever injustice and wrong we, as a people, have inflicted upon this poor and helpless race, we can now retrieve and atone. There are now 66 Indian children at this school,—57 boys and 9 girls. It is desirable to increase the nnmber. Accommodations can be provided for about 100 more by the erection of a new house adjacent to the present buildings. The land for this purpose has already been donated hy a lady of this city interested in the work. The estimated cost of the hnilding is $15,000. It is not a large sum, and should be obtained without difficnlty. The following letter from the Department of the Interior will he of interest as bearing upon this subject:—

WASHINGTON, March 27, 1880.

Dear Sir:—I have received your letter of the 20th instant and beg leave to say in reply, that according to our understanding when you were here, as soon as provision is made for them at Hampton school, by the erection of a new building, for which you and your friends expect to furnish the money, I shall see to it that fifty Indian children are sent there for their education, and that one hundred and fifty dollars a year for each pupil be contributed by this department for their support. It is proper to add, however, that I can guarantee an arrangement of this kind only for the time that I am in office, and that my successors will undoubtedly act upon their own views in such matters.

Very truly yours,

C. SCHURZ.

William H. Lincoln, Esq.

It will thus he seen thot the Hon. Secretary favors the plon, and once established there is no danger that it will not he continued.

Subscriptions in aid of this heneficent enterpriso are earnestly solicited, and may he sent to William H. Lincoln, treasurer of the committee, Boston. The snm of $15,000 is needed. It is hoped there will he a liberal response.

THOMAS TALBOT,
FREDERICK C. PRINCE,
RUFUS ELLIS,
JOHN W. CANDLER,
WILLIAM H. LINCOLN,
} Committee.

BOSTON, *May*, 1880.

A BRIEF HISTORY OF THE HAMPTON INSTITUTE.

The Hampton Normal and Agricultnral Institute stands on the east shore of Hampton Creek, a little below the town of Hampton, two ond a-half miles from Fortress Monroe, on an estate of one hundred and twenty acre, once known as "Little Scotlsnd," and during the war, known as "Camp Hamilton," the base hospital of the Army of ths James, wherc as many as 15,000 sick and wounded Union Soldiers were cared for et one time.

The first slaves brought to America were landed a few miles off; and here the earliest English civilization on this continent was established. The second church built in America stands in the town.

During the war, Hampton, Va., was regarded hy the freedmen as a city of refuge. In the neighborhood, great numbers of "contrabands" collected and were protected and provided for hy ths Government, and the first school for freedmen was established among them.

The beauty and healthfulness of the spot, its accessibility, hy water and railroad communication, as well to Northern markets as to the region of the Chesapeake Bay, and to the whole of Virginia and ths Atlantic States, with the density of the colored population in its vicinity, marked it out as a suitablo centre for a great educational work.

The American Missionary Association, of New York, having purchased the "Little Scotland" estate in the summer of 1867, for the sum of nineteen thonsand dollars, fitted np the necessary buildings; and in April, 1868, the school was opened, with fifteen scholars, on a manual labor hasis.

In June, 1870, the Institute received a charter from the General Assembly of Virginia, creating a corporation, with power to choose their own successors, and to hold property without taxation. They number seventeen, and now hold and control the entire property of the school hy deed from the American Missionary Association. No denomination has a majority on the Board of Trustees. The school is, however, decidedly religious in its teaching and influence. Their corporate title is "The Trustees of the Hampton Normal and Agricultural Institute."

In march, 1872, the General Assembly of Virginia passed an act, giving it one-third of the Agricultural College land grant of Virginia. Its share was one hundred thousand acres, which was sold on the 1st of May, 1872, for $95,000; hy the terms of the act this grant may he withdrawn. Nine-tenths of this money has been invested in State honds bearing six per cent. interest; the other tenth has been expended in the purchase of additional land, increasing the size of the farm to one hundred and ninety acres. The land thus received is a portion of the "Segar" estate adjacent to the grounds of the Institute, and well adapted to the needs of the school. The State has, np to the current year, regularly paid the interest, ten thousand dollars a year, on the fund. None of this can he nsed for building or improvements. It covers one-fonrth of the annual running expenses of the Institution. The dishnrsement of this income must be ratified hy a Board of six Curators, (three of whom may be colored) appointed hy the Governor every four years. They meet with the Trustees annually and attend their deliberations.

With liberal grants, amounting to fifty thousand dollars, from the Freedmens' Bureau, through Genl. O. O. Howard, Commissioner, and hy the aid of friends, the school was soon able to erect a large brick building with temporary dormitories, and admit many more students. It has since, hy the help of friends, erected a larger brick building, Virginia Hall, costing $80,000, and permanent dormitories and buildings for various purposes, and purchased a valnable farm of 330 acres.

AGRICULTURAL.

ARTIFICIAL HATCHING AND REARING OF FOWLS.—Desirous of presenting to our readers a report of the experiment now in operation at Codnor Farm in Concord township, owned and managed by Col. Frank M. Etting, we called there a few days ago to glean the particulars. We found the Colonel a genial gentleman of cultured mind and refined tastes, and a man who zealously prosecutes the vocation of farming more from a love of the pursuit, than in obedience to the stern mandate of grim necessity. Proceeding upon a tour of inspection a short walk brought us to the poultry department, which, by the way, is an enterprise that was originated and is conducted by Mrs. Etting. One of the houses—for more are to be built—is completed for the comfort of laying hens. It is 100 feet long and 12 wide, divided into eight compartments, with a separate run of 12 feet by 50 feet—into which each pen opens—inhabited by superb Plymouth Rocks—14 in a pen, with one cock to each pen; all of these are pure and derived from the one of best strains in Massachusetts.

The appliances for feeding cracked corn, rye, oats, hone-meal, oyster shells, &c., are very complete, and we noticed also, a simple, though apparently effective contrivance for watering the fowls; it being an earthen crock with a heavy stone made to fit over it, giving full access to the water without subjecting it to being overturned or befouled. The roosts are placed over the nest boxes, while the latter open from the front to take out the eggs, and the droppings fall upon a board, which strewn with sand or muck can be cleaned off daily, thus with the system of ventilation adopted the pens are kept pure, and the fowls in perfect health—a plan hitherto pursued for over two years, and which has effectually kept off the diseases to which fowls kept confined in any number, are supposed to fall heir to. No cholera or roop or such complaints ever having been discovered on the place.

The location of this, as well as the houses not yet completed, is admirable, being situated on one of the finest pasture fields of the farm, sloping towards the southwest, embosomed in the surrounding hills, and protected from the north and east by a large orchard, or the mansion grounds and shrubbery. A few paces from the pens is the feeding house of three stories, the cellar containing a cistern and a room for mixing warm food; here also is Baker's patent hot water heating apparatus. In the second story is the Incubator room, this machine being also Baker's patent, and capable of hatching 700 eggs at a time. This apparatus is in running order and has just been started with its complement of eggs. The second story contains bins for various kinds of chicken feed, and the third story will be used as a hed chamber hy the attendant. Adjoining this building is the glass house where the little chicks are fostered and raised after breaking the shell. It is 60 feet long and 30 feet wide, and built wholly of glass. Ranged along one side are the artificial mothers, five in number, each capahle of brooding 200 chicks, thus affording a capacity of 1,000 at a time, from two deys to six weeks old. When six weeks old they are to be transferred to the opposite side of the same house where hot water pipes keep the temperature at the proper degree. The brooders are also heated by a system of hot water circulation, and so placed on an inclined plane as to enahle the little chicks to adjust matters to a warmth satisfactory to themselves.—*Exchange.*

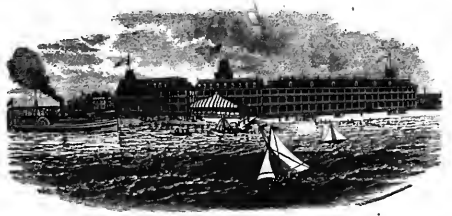
THE HYGEIA HOTEL,
OLD POINT COMFORT, VA.
Situated within one hundred yards of Fort Monroe;



At the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. mails, landing only 20 rods from the Hotel, which is sustantially built and
COMFORTABLY FURNISHED;
Has hydraulic passenger elevator, gas and electric bells in all rooms, water rooms for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or public building in the country. And as a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this House, with accommodations for about
SEVEN HUNDRED GUESTS
Presents inducements which certainly are not equaled elsewhere as a summer resort, or cold weather sanitarium. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleeplessness and nervousness the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics at the Hygeia.

Hand Crabs
FROM HAMPTON ROADS.
Carefully Picked, Packed, and Hermetically Sealed, by
T. T. BRYCE,
Normal School Grounds,
Hampton, Va.
The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On every can will be found full directions how to prepare Crab Salad and Deviled Crabs,—two dishes concerning which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surprising delight of the palate. The meat of the crab is, beyond peradventure, the most delicate and delicious of all seafood, far exceeding in fineness of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment need in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For pic-nics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $5.00 a case, not cash. Money may be remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $2.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

HEALTH AND HUMANITY.

"I saw how it was to be the very first evening. John had no eyes nor ears for any one but her. I told him soon that I would not hold him to his promise to me. Better lose all when the heart is gone!"

"But could Emma love him after this?"

"She was young and thoughtless; but it was worst me?"

They might ask questions, but neither could answer. Nothing came but tears and sobs. Susan roused up first. She must not give way. She must try to help. She called the frightened children to her, and they soon came and clung to her when they had looked in her

HEALTH AND HUMANITY.

WHOSE FAULT IS IT?

The kitchen clock was striking six as Susan Young opened the shutters one summer morning, threw up the window, and leaned out to enjoy the scent of the flowers. The yard was not much larger than the kitchen, but the children worked and played in it, and made it cheerful—"Bless their little hearts!" as Susan said to herself.

She turned to begin her work by lighting the fire. The sun shone in, and the bright tins caught the light. The kitchen was all in order; and as soon as the sticks began crackling, and the kettle was put on, and the place dusted, she was ready to go to the parlor.

Susan was servant to Mr. Wilson, a clerk in one of the factories of a busy, smoky city. But the house was airy, though it was in a city, because Mr. Wilson's maxim was "Health is wealth;" so he chose to live in an airy part of the town, though he paid higher rent than if he had lived in a worse situation, and had to walk a long way to and from his work besides. "What then!" said he "if I am tired at night I sleep the sounder; and I see my wife and children come to breakfast with healthy faces. As to the rent, we will save in other things. If I were to spend twenty cents a day on something to drink, that would be more than fifty dollars a year. We will do without. This pleasant little home, and a thankful heart to the Giver of every blessing, is worth all the liquor twice over. We have good water here; tea is getting cheaper, and my wife makes capital coffee. What more do we want?"

He kept his resolution; and as he was blessed with a good wife, he had a healthy, happy home. It was small and frugal, for his salary was but small, but it was not the less happy for that. Susan had lived in this family for five years.

"There's Mrs. Wilson gone in to the children," thinks she to herself, as she goes to the parlor door. "Half-past six by that." And as she opens the window and sweeps and dusts the neat little room, merry voices are heard above; splash goes one child after another into the cold water, and little feet are running over the floors. Then they come trooping down with shining morning faces and clean aprons, Willie and Johnny, and Lucy, the eldest, who leads down little Emmy. Emmy is Susan's favorite, because she has a sister Emma whom she loves dearly. They must all have a kiss from Susie, and then they bustle out to their garden. Their father has been up and busy over his books since six; he enjoys his evenings with his family, but he is always early at work. The parlor is fresh and bright with wide open window, and breakfast laid when he comes down at half-past seven, and the whole family collects to morning prayers. They are seated to breakfast at eight; the children with their bread and milk, their father and mother with their coffee, and Susan with hers in her nice kitchen.

Mr. Wilson is off to the factory directly, and the mother and children go out soon, for she has to market this morning. Then Susan clears up breakfast and goes to the bed-rooms. They look rather empty and they are very cheaply furnished, but everything is so clean, it is a pleasure to look at them. This had all cost very little, but it was all that was wanted, and there was not a speck of dust to be seen, nor was anything left standing that ought to be carried down, nor any pitcher left unfilled with fresh water, when Susan left the rooms after making the beds, and went down to her kitchen ready to take the orders for dinner.

This was the regular way in which the work went on, and Susan had time for needlework in the afternoon; but to-day the regular way was going to be disturbed, as you shall hear.

About twelve, when the children were at lessons with their mother, she sent Susan out on a message. It should not have taken above a quarter of an hour, but one o'clock came, and it grew near two, and still she had not returned. Such a thing had never happened before. Mrs. Wilson had to cook and lay the cloth, and was anxious besides, lest Susan should have met with some accident; but when Mr. Wilson came home at two, she was behind him. Her eyes looked red and she seemed flurried; but she only said, "I am very sorry, ma'am, to have been so long," and made haste to the kitchen. She was not like herself at dinner, and an hour afterwards when Mrs. Wilson went to the kitchen, she was sitting at the table with her face hid in her hands.

"Susan, what is the matter?" asked her mistress.

"You deserve that I should trust you, and I believe that you can explain the reason of all this; but you ought also to trust me. Who was that young man that my husband saw walking with you, and why do you seem so unhappy? I would gladly help you if I could."

"Oh, you are very kind, ma'am," said Susan, starting up; "I never thought to see that young man again, and the sight of him brought back so many thoughts of my own home, long ago."

"Is he a relation then?"

"No, ma'am; no. But he was a neighbor's son, and we are of the same age, and we went to school together, and told all our troubles to one another; and when he was 'prenticed to a saddler in our village, it was just the same. Not a day but we saw each other, and my little pet, my sister Emma, was his pet too. She was six years younger than me, and everybody said she was the beauty of the village, and so she grew up. Well, ma'am, when she was eighteen, and he was in good work, she came home from a long visit to grandfather. Every evening John Turner came to see ma then. We were to be married in a month."

"My poor Susan!" said Mrs. Wilson.

"I saw how it was to be the very first evening. John had no eyes nor ears for any one but her. I told him soon that I would not hold him to his promise to me. Better lose all when the heart is gone!"

"But could Emma love him after this?"

"She was young and thoughtless; but it was worst of all to me that she made light of it, and besides I never could see that she cared for him. She liked to walk with him, and laugh with him, but if he tried to say anything serious to her she would turn it off; and it was very soon over, for a few weeks afterwards a young city workman came down and fell in love with her and she with him. He was handsome and pleasant, but I could not wonder that she should like him better than John Turner. Now came out John's passion. He accused the other of robbing him of the girl he loved and that loved him, for so he believed she did, and 'I hold you answerable to me that would have cherished her as long as I lived, for her happiness,' he said. His lips trembled and his face was pale as he spoke the words, and he went out without bidding any of us good-bye. He left his trade and his country and sailed for California, and I have never heard tidings of him since, till this very day."

"No wonder you forgot everything but this! How did he fare in California?"

"He is well off, and had plenty there; but he took a longing to come home, so he came. He wanted me to give him Emma's direction, but I refused at first, and then it came out afterwards. He declared that he does not care for her now, but he wanted to see her once more. He has never married another, he said.

"Is Emma happy in her marriage?"

"I hope she is, ma'am, and believe it, too, but I have not seen her for six years. The last time was on her wedding-day. I can see her now in her light gown, looking a real beauty, so every one said. It was a merry day, but I could not help thinking of him who was alone on the seas. They went to the city, and Joseph Spearman, that's her husband's name, has always been in work, and they took nice lodgings, so I heard from her. But troubles came upon me fast after the wedding. Father and mother died both within the year. When I was left alone, I made up my mind to go to service, and came to you, ma'am."

"But you will see John Turner again?"

"If you please, ma'am, he will call next week. I think I will write to Emma. I remember her last letter to me was written seven months ago, after her baby was born. He was her fourth child. I thought she seemed low-like, and I would like to hear of her again."

Three or four days after this, Susan got a letter in answer to the one she had written, not from Emma herself, but from a neighbor, saying, that Mrs. Spearman was very ill, no one thought she would live, and they did say her husband ill-used her. He had got into bad ways and drank, and they had moved into one room in a poor tenement house. The baby was dead, and all the children sickly. Mrs. Spearman did not want her sister to know, but it was right she should, and so the direction of her room was sent.

"I must go to her!" was the cry of Susan's heart. "My poor, pretty little sister! Her husband ill-nase her! Would he dare to lay a hand on her? I cannot rest till I see her!"

Mrs. Wilson thought that it was indeed Susan's duty to go to her poor sister; but she hoped things were not so very bad, and that she should soon get her good servant back again. The next morning, it was Saturday, Susan was ready to set out. Mr. Wilson paid her wages up to the day, and she had money in the Savings' Bank, if she wanted more. The children cried, and begged her to come back as soon as she had made her sister and the poor little girls end boy well, and her sister blinded her eyes as she turned from the door.

It was afternoon when she got to the city, and walked away from the station, carrying her little bundle. She had to ask her way several times, but at last got to the street out of which the alley turned, and then a woman in a coal and potstoe shed showed her the alley.

Her clean cotton gown and new straw bonnet don't look much fit for that place! thought the woman to herself.

The alley was narrow, and had a nasty gutter down the middle of it; the air was close and bad; numbers of ragged children were playing about the doors. Susan asked for No. 10, and a boy pointed to it. She went in, and mounted the dirty, creaking stairs. Three-pair front was Emma's room.

Susan stood outside the door, and felt afraid to open it. What should she see when she did? What could she expect in such a place as this?

As she stood, she heard a child begin to cry within, and then a harsh, grating sound of a woman's voice called out, "Hold your tongue, or I'll give you the stick!"

That was not Emma's voice. Her voice was sweet and bell-like. She must have come to the wrong door, and must knock and ask. She knocked, and the same harsh voice said, "Who's there? Come in, if you want to come!"

She opened the door. A sickening smell and the darkness of the room confused her at first. Then she saw a little boy seated crying on a floor, black with coal dust and dirt; a girl younger than he standing by him; and very little else in the room besides a small bed against the wall, on which lay a woman, with a little child in her arms.

A woman! with hollow cheeks and large startled eyes, and a tattered black cap hardly blacker than the blanket that covered her. A woman! Susan stood by the door, and as she stood, began to tremble from head to foot, and had not strength to move. But the woman dropped her child on the bed, opened wide her arms, and gave a faint shriek, and the next instant they were clasped in a long, long embrace.

"Susan! my own sister Susan!"

"Emma! my darling! my pretty, dear sister! why did you let it come to this? Why did you not send for me?"

They might ask questions, but neither could answer. Nothing came but tears and sobs. Susan roused up first. She must not give way. She must try to help. She called the frightened children to her, and they soon came and clung to her when they had looked in her kind face. Then she took the wailing little one in her arms and soon quieted it. "Poor little Polly," she said, "you do look ill! and this is Susie by me here, and this is Tommy. What were you crying for, Tommy? I know your name, you see."

"I want my tea," sobbed Tommy.

"Then you can't have it yet," said his mother. "I have no strength to get it. You must wait till Mrs. Larkins comes. She's a kind neighbor, Susan, that comes in to help me when she comes home from work. I don't know what I should have done without her."

"I will get tea," said Susan; "I brought you some nice tea and sugar from Mrs. Wilson, Where's the wood to light a bit of fire?"

Susan had tucked up her gown, and was down on her knees clearing the grate in a minute. She found some sticks and matches. There was a mountain of cinders under the grate, and some coals were flung down in a corner of the room. The fire was soon alight. She shovelled up the ashes, and put them in the box where the coals should have been, but she looked round in vain for a brush.

She had dusted the table, and now set the tea-things on it and made the tea; then she put on her bonnet to go out, at which both the children began to cry.

"I am coming back, dears," she said; "don't cry, aunt Susan is only going for the milk and bread and, butter."

Emma opened her eyes and looked wistfully after her; and a smile really did light up her pale face when, in a short while, Susan came back with all she went for. She put the things down and went to the bed to take the thin hand that was held to her; and "Let me wash your dear face with some of this cool water," she said. "There! it refreshes you. Now the hands. Now I have brushed your hair a bit, and you must put on a clean cap; I have one to spare. Oh, you look ever so much better."

But Susan could say no more; a choking came in her throat, for now the face looked like the Emma of long ago, only shrunk and faded. She hurried to the table; the two children were already seated on one chair, looking at the loaf. She supplied each with a good slice of bread and butter, and gave them a mug of sweet weak tea between them; then took a cup of tea and slice of toast to their poor mother, feeding the little sickly Polly herself, meanwhile, with a spoon.

"How nice it is!" said Emma. "I have not liked anything so much for many a day. You have made it all look so comfortable!"

Comfortable! Susan looked round the wretched room, and thought poor Emma must indeed have had to misery if she could think there was comfort here. She was herself suffering so much from the close air that she could not taste the food, though Emma pressed her. She had tried to open the window from the top, but could not; and when she put it up from the bottom it fell again, for the pulley was broken; but not before she found out that things had been thrown from the room on to the ledge of the roof, that made it worse to open the window than leave it shut, for such a had small came in.

The children grew sleepy after tea, and Susan helped them to creep in at the bottom of the bed. This was their place. They lay between the dirty blankets, for there were no sheets; and all she had to do for them was to take off their ragged frocks. She thought of Mrs. Wilson's children, and how they were washed all over with soap and water every night before their clean little nightgowns were put on.

"Poor little souls!" she said to herself. "Poor little neglected things! No wonder their skins are full of sores, and their limbs so thin. God help me to do something for them; and He is sending sweet sleep down upon them now."

She sat down by Emma, and they remained silent for some time, with their hands clasped together. Susan spoke first.

"What complaint have you, Emma? Have you any doctor?"

"Not now I haven't; I had Dr. Cockle, that has the large doctor's shop near. He said I had a decline. But his physic was so dear, and I don't think it did me good."

"Do you always keep your bed?"

"Oh no, I keep about. I had but just laid down when you came. My back ached so."

"Why don't you go to a dispensary?"

"Jo would not let me. He would have me have a paid doctor."

"Where is Jo?"

"At work. He'll be home by and by."

"Then he is in work! What wages has he?"

"From seven to eight dollars a week."

"Ah, then it was true that I heard. You ought to be kept in comfort and plenty with such wages; and he ill-treats you too!"

"Him! who told you lies like that?"

Susan hid her face. A black bruise on her sister's arm had that very moment struck her eyes.

"You can't deceive me, Emma. Oh, to think how we were brought up, and the comfort in our little cottage, and five of us all with schooling, and never wanting for decent clothes and food, and father with but his five or six dollars a week!"

"Oh my home, my dear home! Mother! father!" cried Emma, bursting into tears. "It's at the public house all the money goes. To pay the rent for this room something has to go every week. The bed must go next; and then when all's gone we must go down to the kitchen. They tell me the woman's dying that's there now. It's damp, and has a horrid smell, and a grating over the window, for it's underground.

Please God to take me before I have to go down there!"

"He's a villain that has brought you to this."

"No, no! he's good when he's not in drink; and he's

John rose, but dragged the other up with him, and held him fast by the collar. The wretched man was sobered by the shock, and stared in horror at the two

away. When he could speak, he held out his hand to Susan, and said, "Sister-in-law, God bless you!" He could say no more, but there were many thoughts in his

Please God to take me befors I bave to go down there!"

"He's a villain that has brought you to this."

"No, no! he's good when he's not in drink; and he's a good workman—none better. But ths workshop's close and hot, and he wants comfort when he comes away, and there's none here for him."

Susan's conscience smote her. It was not ths way to help Emma, to make her hate her husband. It was a blessing she could love him still.

"There *is* no comfort here, Emma," she said, "let us help you to make it better. Let us try to make your husband like his home."

Emma fell back on her pillow. "It's no use to strive," she said. "What can I do? dragging up all ths water and carrying all down. It's no use. I'm too ill. I've no heart since I lost my poor baby, and the children are always dragging at me, and Tommy's always fretting."

"No wonder in such a place. They are all ill. I will make it quite another thing."

"I have been thinking where you can sleep," said Emma, who did not like to hear Susan seem to say she had not done her best. "There's only one bed here; and then, you must not lose your place for me."

Susan said she should not lose it by staying a little while, and she knew she must find a lodging.

"Now you had best go down stairs," said Emma, "and ask Mrs. Larkins to let you share her bed. You will like her room. Only say I sent you."

Susan went, not expecting to like it very much, and was never more surprised than when Mrs. Larkins opened her door; for it was a little palace of comfort, and she and Mrs. Larkins made friends in a minute. Ths room was very small, but the window was bright and wide open, and a canary was singing in his cage, hung against the shutter.

"Sit ye down," said she, after the bargain for a week's lodging had been made. "You say the poor soul upstairs wants nothing more, and you're tired to death;" and she put a dust more tea in her brown teapot, blew up the hot cinders, made ths kettle boil, brought out some fresh water-cresses, and prepared to give Susan her tea; and indeed Susan was very tired, and enjoyed it much. They talked a great deal about Emma.

"She will never be better as long as they have but one room for them all, and it so close," said Susan. "If she kept it like yours it would be different; but with his wages she ought to have better lodgings."

"Let me tell you, my dear," said Mrs. Larkins, "thet wages is of no account if a man goes to the public house; and that nniess a woman finds a husband as don't, and that's not one in twenty, she's better without him. Now I make, mey-be, two dollars a week, more or less."

"Two dollars! and they have eight!"

"That's it. What I make, I make; and what I spend, I spend on what I went. I should like more, it may be, at a time, but I do pretty well. My old man—that's his picture you see there—was sober enongh, as times went; he seldom drank at all, so he left all these things and more behind him; some I gave to my son, and some I sold. We had six children, and I lost him, poor fellow, at thirty-five."

"You were happy with him then?"

"Yes, yes; I got e fright once or twice that he was going to take to the public house, but I ticed him off it. I kept my place as tidy and cheerful as I could always. Then I would say to him, 'John,' says I, 'don't you think if we could save e bit o' money, to buy some more plates to fill the shelf,' says I, 'or e looking-glass for you to shave by?' Then the best of all was a fellow-workman persuaded him to go to a place of worship on a Sunday; it was a nice pleasant walk there, and the children went to Sunday-school; and they got that Bible there on the shelf, by paying every week what we could spare; and he liked us all to look neat and tidy on Sunday, so he never wented to spend his money away after that. His own home was pleasanter than the rum-shop, I took care o' that."

"Ah, yes!" said Susan, "that's the way if only Emma could do it. But she's so ill!"

"She's not so bad, if it wasn't for fretting, and if she would go to tha dispensary, they'd do her good. Thet's Spearman's folly ahont a paid doctor. There's the best of doctors and medicines for nothing at the dispensary; and as to pay, they don't make us pay; but I go to work sometimes et ons of the doctor's houses, and cook told me he get five or six dollers from rich people."

"I will try and persuade her," said Susan, rising to go back to Emma. "But it's not the doctor she wants, Mrs. Larkins; it's ths fresh air, and wholesome food, and a happy heart." Mrs. Larkins sighed and shook her head, as if to say she thought it a hopeless case, and Susan went sadly np-stairs. She fonnd Emma sitting at the table, wearily leaning her beod on her hand. She was listening for her husband; he had promised to come early, she said, because she was so poorly, but Saturday was always the worst night with him.

Eight o'clock came, then nine, and Emma began to cry and moan and complain of Jo, and at last said she was so ill, thet she must have some drops from the doctor's. Would Susan light the candle first, not to leeve her in the dark, and go for the drops?

Susan went, and as she turned ont of the alley, almost ran into a man who was reeling into it. There was not light enough to see his face, but a dread came over her that it was Joseph Spearman. She was kept waiting so long in ths shop, thet twenty minutes had passed before she got back. As she ran up to the door, she heard e scream, then lond voices of men and a heavy fall. She hurst in. Emma was clinging to a chair. Two men were struggling on the floor. The undermost was Jo, ths other had his clenched fist ready to strike a heavy blow. Susan clnng to ths uplifted arm with all her strength, and beld it back. The man turned round, and their faces met. It was John Turner!

"Spare him! don't harm him!" shrieked Emma. "He's good to me when he's not in drink. Look at me, Jo! Are you hurt?"

John rose, hnt dragged the other up with him, and held him fast by the collar. The wretched man was sobered by the shock, and stared in horror at the two strangers. He remembered their faces. They seemed to him like two ministers of wrath come to punish him. John shook him in his rage, and said dreadful words to him thst cannot be written, and then called him a coward that would strike a woman.

Jo held out his trembling hands towards his wife, and she seized them, kissed them, and tried to comfort him. He was shuddering from head to foot. John released him, and he staggered against the wall.

Susan touched John's arm. "Best leave them alone," she said, "she will do him mors good than we can."

John followed her out, hnt stopped again outside the door. "He was to be answerable to me," he said, "and see what he has brought her to. She is living in a pig-stye, and he must beat her besides. I heard her cry as I got to this door, and rushed in upon him."

"Remember, he was not himself; he was drunk."

"Where's the excuse of that? It makes a man mad to think how the workingmen make sots of themselves, and keep themselves down by drink to be the poor slaves they are."

"Don't slander your brothers. They are not all like him."

Susan turned to leave him as she spoke, hut he begged her to let him call on her again, to whieh she agreed before they parted; and she went down, thankful to lay her head on the pillow by the kind old Mrs. Larkins.

Never had she passed such a wretched Sunday as she awoke to next morning. Jo ley fevered and bruised in body and soul, with racking pain in his head and sheme in his heart. Emma nursed him, hut was herself half dead. Susan took care of the children and waited on them all.

Snsan went to bed weary and hopeless, but when she went up to Emma in ths morning, she was surprised to find that Jo was gone to work, and Emma in better spirits, because he had promised feithfully to come straight home.

"We must do our parts, then," said Susan.

"Why, what can we do?" said Emme. "He says he'll come home, and if he don't, we can do nothing to hring him. Hold your tongue, Tommy! What did you woke up for? There will be no peace now, for he'll fret for an hour, and I want to go to sleep egain."

"When children fret, it's because they are in some pain or misery, poor little souls!" answered Susan. "They heve merry little hearts, and would be laughing and shouting and running about at play all day, if they were but let alone. Get up and come to aunty, Tommy! Oh, Emme! if you conld but see my children! We don't heer a cry sometimes from morning to night."

"Ah! it's well for them with ell their comforts. Stop crying, Tommy, or I'll give you the stick!"

Tommy clambered out of the wretched hole he was in, and came crying to Susan. She took him on her lap, and asked him if it would not he e pity to wake up little sick Polly, and keep poor mother awake too. And he began to wipe his eyes with his sleeve, and try to sob mors softly. Susan felt that he was burning hot, and saw that he was in a fever with the bites of vermin. Coaxing and playing with him all the time, she managed to get off his rags, and to wash him all over with soap and water. It was sad to see in what e state his skin was, and she could scarcely hear to put on his dirty clothes again; hut he had no others, though "he shell heve," thought Susan to herself, "please God to spare me, before many morniugs are past."

He was, however, very much refreshed, and e bit of bread that had been left last night, and an epple and e hall, given to Susan for him by Willio, when she was coming awey mede him so heppy, that he set down in a corner, eud began to talk to himself, and sing in a low tone, now and then, as he played with the hall, and took e bite by turns. Emma had heen asleep, but she looked out et him in wonder.

"Well, you have e wey with children, Susan," she said; "but you always had. I'm sure I can't manage them, and I don't like to heat them, but sometimes I am forced."

"Beating does no good," said Susan. "It only gives them another pein to fret ahout, poor souls, and they've enough without."

"Take some, mammy!" cried Tommy, running to his mother, and holding his epple to her mouth.

Emma burst out crying. "He's e good little fellow, Susan," she seid. "They are all good children, but whet's to become of them? They must go to the workhouse when I'm dead, for I've no hope of Jo. Oh, my poor children! I wish we were all dead, and laid in our graves."

"It's no use to say things like thet," said Susan; "and if you go on so, you need not have any hope for Jo. Look whet e place you're in. He'll never stop in it. I don't know who would that could keep out of it. I'm going to clean it up, that's what I'm going to do;" and without waiting for objections, she set to work so hard that Emma conld not be idle. Mrs. Larkins lent pail, scrubbing-brush and broom. Susan bought soap and the other things. The window was soon bright, thrown wide open, for the horrid dirt on the ledge had been sent running down the spout by a mop and many e pail of soepy weter, and the window had been forced down from the top a hit, and Emme promised to keep it so day and night as Mrs. Wilson did. The grate was cleared; dust, cobwebs, and dirt swept off ceiling, walls, and floor; bedstead, floor, table, and chairs, scrubbed; the sheets taken out of pawn with some of poor Susan's money; the bed made, and Emma dressed in Susan's clean gown hefore six o'clock. Then they pnt supper ready on the table near the window; bread and cheese and radishes, a pint of beer and Jo's pipe. Susan sighed as she put the beer down, for she would fain have spent ths money on wholesome bread for the children, hnt she must not expect too much of Jo all at once. They were all ready for father now.

And father came as he had promised, and was so surprised when he opened the door that it took his breath away. When he could speak, he held out his hand to Susan, and said, "Sister-in-law, God blees you!" He could say no more, hut there were many thoughts in his mind as he sat smoking his pipe.

They were ready for Jo in wonderful order when Setnrday evening came, and well did he reward them. He came straight home and laid his whole week's money before Emma, only short by his daily dinner. She sobbed in her joy, and placed the children in his arms and told them to thenk father for her. Susan stood by with glistening eyes, and they overflowed when Emma threw her arms around her, and said, "It's all your doing, my sister."

"She shall tell us how to lay out the money," said Jo. "There's the rent, and food, and we're behind at the grocer's and baker's I know; hut if there's some to spare"—

"Trust that there will," said Susan, "and get your Sunday coat out of pawn this very night." He did so, and then took his children, in whom he could now take pleasure, a walk towards the country.

The Sunday morning was a different one to the last. Susan took out her Bible, and laid a number of the WORKMAN on the table, which drew Jo's attention. Then they got into talk, and at last Jo said he had made up his mind to give up drink altogether. Susan and Emma were so filled with joy to hear this, that they could hardly speak. Then he talked of the Sunday-school he went to when he was a hoy, and thoughts of his sonl and another world came into his mind. "Well," said Emma, "I hope we shell go to heaven when we die; we must do the best we can." "There is one way, then, for us all," said Susan, "through Jesus Christ; if we feel thet we are sinners, and can do nothing to save ourselves, hut ask for His merey and an interest in His death, He will not refuse any of us, for He came to seek and to save them thet are lost." Thet Sunday evening Jo went with Snsan to a place of worship, and the hymns and preyers there offered, went to his heart.

Susan spent the greater part of several days trying to find two nice rooms; but everywhere she was disappointed.

At last when she was almost in despair, John Turner took her to one of those large blocks of huildings, called Model Lodging Houses, where there happened to be a set of two rooms to let. Here she found all she wanted, and took them et once. There was a private door, a little lobby or passage, a small room with sinks and water, a kitchen, and the range with hoiler and oven, e hed room and every convenience; and the windows looked over e large graveled square, wherc numbers of children were at play. Trne, the rooms cost two dollars a week, and were rether far off for Jo; hut he had said he would stand this. More than a hundred families lived in this huilding, all equally well provided with comforts.

It had come to the last week of Susan's visit. She had promised Mrs. Wilson to go back to her place by the night train on Saturday, so she should see Emma in her new home before she left her; for the old room was to be given up on Saturday." She brought ahout e meeting between John Turner and her brother-in-law, and saw them reconciled. It seemed to her, when she saw them shake hands cordially, that her work was nearly done, and she might go heck happily; hut yet she felt sad as she thought of it.

She often wondered, too, whet John's parting words meant, for he had said, "Spearman, I will not heer of paying back, till a whole year has passed." This was explained, however, while she was scrubbing and polishing up the new rooms on Saturday morning, when some nice new things arrived to furnish them. John had lent Spearman the money, and she was not afraid of the payment. He would do it easily if he kept his resolution.

How Susan rejoiced over the new bedstead and mattress, and the little bed for the children. That was the best of all! How proudly she placed the table in the middle of the kitchen, and set the cheirs round the wall, and filled the shelves with pletes, cups and saucers, and jugs, and put the kettle and saucepen, the frying-pen and gridiron, in their places.

"They may sell off all their old things, and only bring in the blankets and sheets and their clothes. Emma has got them all clean and tidy. Poor girl, now," thought she. "Where shall we put them?" As the thought rose, in came a man with a pretty cnest of drawers and looking glass. Now it was complete.

She got supper ready, and then waited impetiently for them. They came at last. Emma, with her pele face, carrying her sick child, Tommy holding by her gown, and Jo, with Susie on one arm, and a bundle on the other. Emma could not believe it was true. This beautiful place could not be her home. She sank tremhling into e cheir. Susan hed her arms around her to welcome her, and hid her good-hye, for her time was come.

"She shell have her heautiful color back by this time next year," said Jo, as he shook Susan's hend warmly, and took an affectionete leave of her, "and the children shall be healthy and happy. Only come back to see us, and God bless and reward you!"

Emme had some parting words to sey too. They were, "His home shall bo kept as mother kept ours. Come again and see it."

Susan was kissing the children one after another, and could not stop her tears; and as she shut the door, and ran down stairs, she heard Tommy's voice crying to her to come back. At the outer door of the, huilding, she found John Turner waiting to see her to the trsin. They walked on in silence for some time, till Susan said,—"I thank you heertily, John, for what you have done."

"A man thet has been such e fool in life as I have," ba replied after a silence of some minutes, "has little right to hope; but perhaps some day, Susan"—

But Susan had turned away, and ha had not courage to say more. Still, she did not forbid him to go down to see her egain; so, as he said, "Perhaps some day"—. Let the sentenca be finished as each reader thinks best.

d out his hand to
bless you!" He

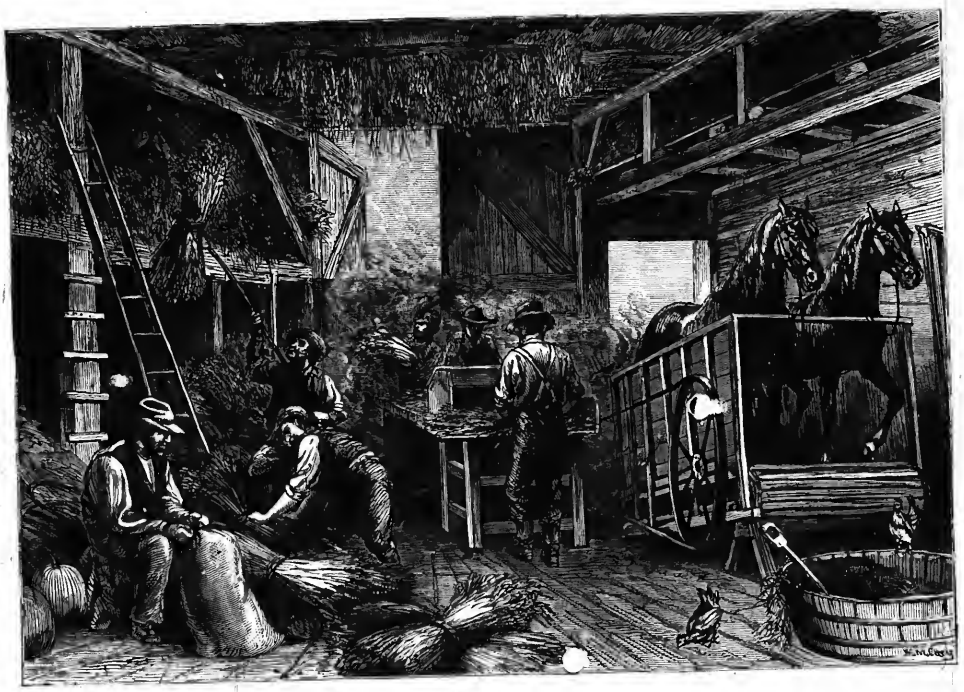
VOL. IX. HAMPTON, VA., JULY, 1880. NO. 7.



AMERICAN INDEPENDENCE.

Thank God for rest, where none molest,
And none can make afraid,—
For Peace that sits as Plenty's guest
Beneath the homestead shade!

Henceforth to Labor's chivalry
Be knightly honors paid;
For nobler than the sword's shall be
The sickle's accolade.

Build up an altar to the Lord,
O grateful hearts of ours!
And shape it of the greenest sward
That ever drank the showers.

Lay all the bloom of gardens there,
And there the orchard fruits,
Bring golden grain from sun and air,
From earth her goodly roots.

There let our banners droop and flow,
The stars uprise and fall;
Our roll of martyrs, sad and slow
Let sighing breezes call.

There let the common heart keep time
To such an anthem sung
As never swelled on poet's rhyme,
Or thrilled on singer's tongue.

Song of our burden and relief,
Of peace and long annoy;
The passion of our mighty grief
And our exceeding joy.

A song of faith that trusts the end
To match the good begun,
Nor doubts the power of Love to blend
The hearts of men as one!—*J. G. Whittier.*

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed at the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work from all parts of the country, is solicited and will be done cheaply and well Estimates will be sent on application.

THE WHITTAKER CASE.

The interest of the SOUTHERN WORKMAN in the condition of the Negro compels it to take some notice of this case. Presuming that some of the readers of this paper have not seen a circumstantial account of it, we will briefly state the facts.

Whittaker, a colored cadet at West Point, was found, one morning, in his room in the barracks, with his hands tied tightly, his hair clipped off, his ears mutilated till they bled. He appeared to be in a fainting condition. On being released, he said that he had been attacked by masked assailants who left him in the condition in which he was found, but that he could identify none of them. Owing to the very sensitive condition of the public mind on the subject of the Negro, and his relation to the whites, the case commanded at once the attention of the press and of the people. A military court of inquiry was at once organized at West Point, at Whittaker's request, as he wished to clear himself of the charge of being his own assailant. The government sent to the court, as an adviser, Mr. Townsend, a noted lawyer and Republican. The military court at first regarded his attendance as an imputation upon its honesty and ability to conduct the case fairly, but in the end accepted his aid, though he withdrew before the case was finished. The officers and students at West Point believed from the beginning that Whittaker was his own assailant.

As usual, before any judicial examination could be made, the press and the people proceeded to pass judgement on the case, upon what is known as "reporters' evidence," the most flimsy, incomplete, unreliable, contemptible evidence known to civilization; evidence which would not be received in any responsible court of justice under any system of decent government. Reporters of papers which favored the colored race, produced statements which went far to prove that the cadets at West Point had committed an atrocious crime against Whittaker. The reporters of papers which did not take a very friendly view of the Negro character also furnished curious and lengthy statements, tending to show that either Whittaker committed the outrage upon himself or that it was done at his instigation. The officers of the Academy were severely criticised by the papers who were friendly to the Negro, and General Schofield, the commandant, issued a general order repelling the insinuations against the cadets.

Much testimony was taken at the trial as to whether or not any cadet had shown any malice towards Whittaker; but the issue was finally made on the question of handwriting. Whittaker produced a letter sent to him before the event, warning him of what would happen. It was said that this letter had been written by himself. A letter written by him to his mother was obtained. Letters written by many other cadets were also obtained. A number of the best experts in handwriting were summoned. These experts were men of large experience in the comparison of handwriting. They had been engaged, at various times, in many important civil and criminal cases, and on their testimony cases of vast importance had been determined. Each expert examined the writing alone, so that no one of them should influence the others. After a protracted investigation, these experts testified that the letter of warning had been written by the same hand which wrote the letter to Whittaker's mother. One of them, Mr. Southworth, who had been decidedly friendly to Whittaker, also testified, that the edges of the letter of warning fitted exactly to the edges of the letter written to Whittaker's mother. Whittaker denied any knowledge of this startling fact. Many of the papers which had befriended him at once "shook him off;" those who were opposed to him became very happy, and many persons who believed in his innocence refused to alter their conclusions.

The court has found that Whittaker is his own assailant. We do not propose to enter into the merits of the controversy, as the case was not tried before us; but we offer several general reflections on the subject.

During the last few years there have been several noted trials, the Beecher case, the Talmadge case, the Hayden case, and the Johnson Impeachment case, for instances. In each of these cases the public passed judgment in advance of any legal tribunal, without waiting for the sifted evidence. Each man decided according to his prejudices, and refused to accept the verdict of a court or jury. It is a dangerous practice to impeach the finding of lawful tribunals. No doubt they do make mistakes, and come to very queer conclusions, at times; but they always have the power to obtain evidence, and sift the conflicting testimony more thoroughly than the outsiders. There must be tribunals to pass judgment upon conduct, and, if they are open to suspicion, there is an end of any true administration of justice, and society has no safeguards whatsoever. If judges, and juries, and courts-martial go wrong, they should be abolished, and society must fall back on the trial by "fire and water." The finding of the court of inquiry in Whittaker's case may be wrong, but it is a very serious matter to doubt it.

But his case has been made unduly prominent, through the influence of the press. If Whittaker is guilty, it is a matter of little significance. It is absurd to put the foolish, unmanly conduct of a colored boy upon the shoulders of the colored race. If colored boys at West Point and elsewhere always did as Whittaker did, there might be a fair inference against the sense and character of the colored race. A Frenchman traveling in America saw two men fighting in the car in which he traveled. He entered in his note-book, "The Americans, when they travel, usually get into a fight." It is illogical and senseless to hold a class responsible for the misconduct of a certain member of it.

Without doubt, the cadets at West Point have persistently refused to associate with colored cadets; but criticism on their conduct comes with ill grace from the Northern people, who, as a rule, refuse to associate with the Negroes. The Fisk Jubilee Singers were, recently, refused admission to a hotel in Boston because they were black. Why did not the public rise in indignation against this insult? Last year, in Marlboro', State of New York, there was difficulty in a Christian church, because the colored members of the church were denied participation in the Communion Service until the white members had first been served. A visiting clergyman made no distinction on account of race or color, but the stated pastor went back to the old order of things, and on those occasions where, above all others, the spirit and conduct of the great Master should have been imitated, the prejudice against color was determinedly emphasized. All this appeared in the papers. Did the public rise up and rebuke this bigoted distinction? If the public can tolerate this conduct, is it not quite absurd for it to censure a lot of boys for unmanly conduct at West Point? We are not attempting to justify the conduct of the cadets; but we are trying to present the case as it actually is. These boys represent the social system from which they came, and as long as that system holds its prejudice against the colored people, it cannot be expected that their conduct will change. If public sentiment changes, the behavior of the cadets will change.

There is a prejudice against the Negro on account of his color. Why it exists, we will not here discuss. It will not be removed until the Negro removes it himself, by such success in literature, in finance, in art, as will make it the interest and pleasure of the white race to reconstruct its sentiments. Public sentiment to-day is muddled on the subject. It insists that the Negro shall not be abused, but in defining what abuse is, it becomes vague.

At the same time, the Negro has much to be thankful for. He is left in freedom to work out his own salvation. A Negro merchant, or farmer, or mechanic, who will furnish a better article in trade than the white, will find no prejudice against him. The King of the oyster market in New York was a Negro, and one of the best caterers in Washington is a Negro. These men have made their way. The Anglo-Saxon race is too fond of good things to reject them because they are in black men's hands. Whittaker's case is a phase of prejudice. The cadets treated him as they were taught to treat the blacks; and he in turn did a very silly thing, which bears neither one way or the other against his race.

W. N. A.

AMERICAN INDEPENDENCE.

When Benjamin Franklin stood up in the British House of Commons to protest against the short-sighted policy of the Stamp Act; "Is there any kind of difference," asked the haughty Lord Grenville, "between external and internal taxes to the colonies?" "The people," replied Franklin, "may refuse commodities of which the duty makes a part of the price." "But suppose the external duty to be laid on the necessities of life?" urged Grenville's ministry. And Franklin amazed them by his true answer: "I do not know a single article imported into the colonies but what they can either do without or make themselves." How far this first bold declaration of American independence, which must have rung like treason in the ears of the British ministry, has been sustained, time has wonderfully shown. The country which then, as Pitt said, had not the right to make even a horseshoe nail, to-day invests billions in her manufactures, and leads the world in her inventions, in this age of invention, averaging twelve hundred patents on agricultural implements alone.

And, as for her agriculture; while in the Revolution all her narrow borders could not supply grain enough to comfortably support the suffering troops at Valley Forge, the prisoners taken having to be fed from kitchen scraps begged for them, America now not only sustains her own enormously increased population, but feeds the world. Fifty years ago, Chicago began her wheat trade meekly with an export of seventy-eight bushels. In twenty-four years, it had increased to twenty-three millions. And now the vast fields of Dakota and the Great West, ploughed and reaped by regiments of steam plows and reapers, pour their golden treasures through her gates. During the nine months ending March 31, 1880, the United States exported nearly one hundred and twenty-four million dollars' worth of wheat, and thirty-two million dollars' worth of corn. This is forty-seven million dollars more than in the corresponding nine months in 1878-9.

What the future of this country will be, with all its immense territory and resources still undeveloped, surpasses the efforts of imagination; but it is well, on the anniversaries of our national birth, to remember in what this American independence that we glory in consists, and how only it will be kept. The men who gained it were working men, from the lowest to the noblest. Jefferson interested himself in inventing a plow. Washington managed his own farm, and Mrs. Washington her spinning wheels. The American people knew how to depend on themselves. And they knew how to "go without" what they could not honorably acquire.

ASTONISHING PROGRESS ON THE SEA ISLANDS.

The Charleston *News and Courier* has recently published a pamphlet extra, giving a very full account of the peaceful but astonishing revolution that has been accomplished on many of the Sea Island of South Carolina, under the stimulus of free labor in the cotton fields. Capt. C. O. Boutelle of the U. S. Coast Survey, who has had intimate knowledge of the Islands and a six year's residence on one of them, in his prominent connection for the last thirty years, with the Department of our Southern Atlantic coast, calling our attention to the "interesting report from this hitherto part of the State," remarks, "I have known the Islands well since 1850, and the progress there shown, especially for Edisto and James Island, is astonishing."

How astonishing, this one paragraph from the report is enough to show. "On James Island where the planting of Sea Island cotton approaches to perfection, the maximum production of lint cotton, (*i. e.* of ginned cotton) to the acre, has arisen from 103 pounds in 1872 to 400 pounds in 1879. On Edisto Island the production has risen from 80 and 100 pounds to the acre, to 300 pounds. Upon a prize acre in Wadmalaw Island last year, the yield reached the enormous amount of 500 pounds. It can be fairly said, we presume, that the average yield on plantations cultivated by the whites is from 200 to 250 pounds to the acre. Under the slave system with large plantations, and comparatively little manuring, the average yield was not more than from 80 to 100 pounds to the acre."

This astonishing result was brought about by an entire revolution in the methods of cultivation necessitated by the altered conditions. It did not come at once; the comparison in drawn between 1872 and '80. The planters stunned by their losses, and the general overturning, did not at once recover themselves; the Northern men who came down in '66, missed the fortunes just within their grasp, for want of practical knowledge. "They knew too much; tried theories of their own, sank their money and left. There is not a single Northern or foreign planter on the islands at this time." The Northerners could not afford to stay for the experience. Fortunately for themselves, the Southerners learned that they could not afford to ignore the theories. Rains, financial panics, cotton worms and free Negroes were the very much disguised angels which drove them into the high road to success. Finding themselves face to face with rain, they made a new departure, called in the aid of science, gave up the large plantations and tried fertilizers and sub-soil drainage on smaller tracts, with an improvement in the crops the first year that has increased every year since in direct proportion to the perfection of the drainage and fertilizing. On James Island alone, there are fifty miles of sub-soil drains, and on one plantation of sixty-five acres there are five miles of drains. The average cost of drainage is from $40. to $50 an acre; of fertilizing, from $20 to $40. As for the profits, a planter on James Island last year expended $80 an acre for fertilizers, labor and ginning, and realized a net profit of $100 an acre. Under fair management, and condition, a net profit of $48 an acre is considered a reasonable average.

Even the cotton worm has yielded to science, and is no longer dreaded. With Paris green for the worms, under draining far the rains, chemical fertilizers for the exhausted soil, and such profits as these for his collapsed pocket, the Sea Island planter may well say "there's no need to hunt for gold mines." The profits have been made usually on small areas; the average size of plantations on Edisto, Wadmalaw and James Islands having been reduced since 1805 from 400 and 500 acres to 50 and 00. The land, however, is all taken up; bottoms which were perpetually filled with water, the resort of ducks and snips and impassable by a horse, have been reclaimed for the richest cotton land by the new system of drainage, and prices of land have gone up, till lands which twelve years ago brought a nominal price are now estimated at from $50 to $200 an acre, while the best are scarcely to be bought at any price.

The relations between the races, and the condition of the colored people on the Island is reported as most gratifying and progressive. Day labor is becoming scarce, owing to the improvement in the condition of the laborers. Colored men who, ten years ago worked on field hands for 50 cents a day, now own their own lands and earn a comfortable support from them. Every inducement is offered by the planters to the colored laborers to settle on their place. On some of the islands the laborer works two days in a week for the planter who gives him a house and seven or eight acres for himself; on others he works one and a half acres of the planters land for the use of five acres for himself. On Johns Island, the colored people own 4,300 acres, on James Island, 1,000 acres, on Wadmalaw, 500 acres and on Edisto they have 4,000 acres, and make two-thirds of the entire cotton crop of the Island. In 1873, a co-operative association of thirty-five colored men purchased a tract of 750 acres on Edisto Island, for $0,000. Their agent, Mr. John Tharne, is now the most prominent colored planter on the Island, owning 250 acres, an extensive store and store-house, and a comfortable residence. He runs a gin house with six gins, advances capital to colored planters, and is worth from $15,000 to $20,000. The progress of education is said to be encouraging. Schools are provided on each of the Islands named, and are increasing in numbers and attendance. With the increase in pros-

perity and education, there is corresponding improvement in morals. The planters on Wadmalaw and Edisto say that they do not even have to lock their doors at night. The colored people as a general thing, do not accumulate much property, but live from hand to mouth. Ranchmen are characters: they are a clever, generous-hearted, sensible set of men, with the rough side out and the best side in. Theirs is an every-day business; there is always something to do; no off days for lounging and is sure to be given them and which they will take in unlimited doses. They have no discretion or self-restraint. They are like the wild turkey or the buffalo; not capable of being domesticated. Honest Indian agents are, in the Colonel's opinion, the great need.

I saw the building, there is one in each district, where tithes, or one tenth of the gross receipts or productions of each Mormon, are paid in; this is part of their religion, but there is less faithfulness in this than formerly.

Rev. Mr. Barrows has been instrumental in

perity sad edacation, there is correspending improvemeat in morals. The planters on Wadmalaw and Edisto say that they do not even have to lock their doors at night. The colored people as a geaeral thing, do not accumulate much money, but they seldom live beyond their means, sad show much honer and promptaess in paying up their debts. A gratleman who has been advancing to colored planters for several years says that in all that time he has never lost $25, which was much more than he could say for his white debtors. Intemperance seems to be the greatest obstacle to their progress, and this with ignorance of the laws of health keeps down the popalstion, which is thought aot to have increased since 1866. A superstition is said to prevail to some extent amoag them, that killing the cotton worms is siaful, and they are behiad the white planters in the management of their land. On the other hand, the *Courier's* correspondeat says that "their mode of cultivetion, while it is not so perfect as that of the white planters, is very similar, and as the whites improve, the Negroes improve with them. It is a fact that caaaot be disputed that the leading colored planters on Edisto Island to-day carry the cultivation of their land to a higher perfection than did their masters before the war." As the *Courier* remarks, the facts show "the fundamental truth that whers the whites succeed and prosper, the freedmen, under the influence of their example, succeed and prosper likewise."

This remarkable report gives the most encouraging indicatioas for the future of the South, the progress of the colored people and the solution of the race problem; and certainly no better illustration could be found of the advantages of free labor.

EDITORIAL OORRESPONDENOE.

OVERLAND—NOTES BY THE WAY.

SUMMIT, WYOMING, *May* 28.

You pay a dollar for a guide book and get very little from it worth having; but fall in, as I have doae, with the veteran pioneer, Col. Majors, who has traversed the western wilds for twenty-five years, and you will find out something.

This Rocky mountain region is a vast natural pasture groaad. As there is ao one to cut and care the grass for winter, it cures itself without cuttiag; there is plenty of food for cattle all winter on these high plains, except when the saow is too deep, and then they suffer and die. But this is usuelly prevented in two ways. The lofty mountain ranges which stretch north and south aboat parallel to each other and one thousand miles apart, gather the clouds and receive the storms of snow and rain, which fall scantily on the plains below, but enough for vegetation. Then the strang wiads carry away quantities of the snow which is very light and dry, leaving the ground nsually bare saough for grazing.

Col. Alexander Majors, of the well-known firm of Russell, Majors & Weddell, who for ten years did all the goverament teaming across the plains with 3,000 wegons, 40,000 exen and 5,000 employees, tells me that from the foot hills of the Rocky and Sierra ranges, to from fifteen to twenty miles distant, there is a gentle slope which is the paradiso of grain growers, and hundreds of miles aloag both sides of each, are cultivated, having wonderful resources for irrigation.

The farmer can direct the never-failing waters of which the mountains are an eternal reservoir, all over his fields, and get great harvests of wheat and corn.

When the slope ends and the level or undulating stretches begin, he cannot carry his water to his crops but he can drive his cattle crep to the water. So here the stock raaches commence and extend for twa hundred or three hundred miles away, especially east from the foothills, water never failing from the supply in the mountains, including Montana, Wyoming, Colorado, Utah and Idaho. This entire country is however adepted to grain; corn, owing to the cold aights, is not raised in this region. The valley of the Missouri and eastward is the place for that. Nebraska, Kansas and Missouri are great Corn States. Uteh only of the mountainous States is rich in fruits. My friend tells me thet stock pays best here. Very little land is needed; money goes into cattle which are branded and run over the public domain, sometimes two hundred miles from the owaer's ranche. But tha brand is sacred; a cattle thief is shot without mercy.

At the great "rounding up" of thousands of cattle in the spring, and whenever opportunity occurs, the drover not only seeks his own but takes pains to inform his distant neighbor as to where his are. This is possible owing to the careful registry of brands at the county seats.

There are cold and dry seasons, when the cattle suffer. An aanual loss of from five to twenty per cent. is expected. There are no sheds or protection of any kind. But saow is worse thau wind. Nature provides these creatures with thick, rough coats.

Ranchmen are characters: they are a clever, generous-hearted, sensible set of mea, with the rough side out and the best side in. Theirs is as every-day business; there is always something to do; no off days for loasging and dissipation; no let up Sundays. It is, compared with the miner's life, a clean, pure life; there's ao luck in it. There are many good miners, but sharpers and loafers gather where there's gold.

The best of the stock is driven up from Texas, some seven hundred miles, with the aid of "Greasers," a low Mexican class who throw the lasso with unerring aim and make a deadly weapon of it. Two will catch the biggest grizzly bear, each by a leg, just for sport, or to match him with a wild bull for a fight. There are no horsemen superior to them in the world.

"I met, in the cars, a young men from Western Pensylvania, who, a little over two years ago had taken up a half section, 320 acres of land et a total cost of $28.00, in Nebraska, twenty miles from say post office, with only one house in sight. Now there is a town with a post office and stores near where he lives. He saw little chance at home with the $800.00 he possessed, so he came west; land cost next to nothing; he built a sod house for less than $30.00 and had most of his money to put his place in order. He had been home on a visit but preferred Nebraska, and is on the road to prosperity. His is a type of thousands in this region.

These sod houses are low and wretched looking, being built of turf cut from the prairie, to the height of eight or ten feet, then roofed over with boards overlaid with tarred paper, and covered with sod. They have ordinary one sash windows, small doors, and when plastered inside are very comfortable and will last five years, though the owner usually gets into something better in less time. The sod house, with aa occasioaal log cabin, is tha skirmish line of our civilization: next come neat but small frame houses.

In the towns along this road, one is struck with the diminutive look of houses and of everything. Men seem like ants on this great expanse, but they will make marvellous changes on it.

Trees grow only along the rivers. Grass flourishes because of its long roots, which reach to the moisture below. There is ao desert. Cattle thrive along the whole line of the road. Emigrants drop off at every station, and, bag in hand, tramp off on some by road nobody knows where. Cattle are scattered over the plains as far as you can see. I have seen but four antelopes, and ao prairie dogs; these creatures heve silently stolen away to quieter haunts.

The always interesting solitary horseman sometimes enlivens the view, but is more interesting as a study close by, for he and his horse seem like one animal. He sits as if he alway had sat there. How utterly unlike eastern riders these mea are in their naturalness and easy grace, and in their perfect *rapport* with their horses. Being the product of circumstances and not got up to be looked at they are picturesque, and one's eye follows them as they canter away.

Crossing the continent at least for the first time is interesting. Car life is pleasant in its way. The beef steaks grew tougher as you go west, which ought not to ha the case in a stock region. Going over a solid road-bed in excellent cars is delightful. One is pretty sure to find pleasant companions in the two or three parlor or sleeping cars on each daily train. It is interesting to walk through the emigrant cars, their appearance at night when their inmetes are curled up on the seats fast asleep, men, women and children huddled together, is pathetic.

I will not attempt to describe scenery. The first inspiration is the sight of the saow capped Rocky Mountains. There is a grandeur in the vast areas over which you go.

There is a sense of antiquity as you pass by the bare hills and rocky ravines where nakedness suggests an earlier, cruder, undeveloped epoch; so unlike the forest crowned hills and green valleys of the east. They seemed to me like volcanic formetions from their boldaess and baldness and rigor. Mountain ranges at your side thrust their peaks ten thousand feet into the air.

The fairest sight was the snow clad Wasatch range past which we rode for hours, so near and yet so far, in the clear atmosphere they seem in easy walking distance but are really many miles away.

INDIANS.

Col. Majors says that fifty years ago, in his father's time, this country was full of Indians who dressed in skins and lived on buffalo, but raised nothing. They were a clean, healthy, fine-looking people, compared with the present remaants of these tribes. Their blood was untainted and pure. Their religion was to fight their enemies and be kind to their friends. They are nearly gone; the buffalo has departed. The white man possesses the land.

He thinks that the prairie Indians can't be civilized and saved too, because of the poison by way of whisky and disease which is sure to be given them and which they will take in unlimited doses. They have no discretion or self-restraint. They are like the wild turkey or the buffalo; not capable of being domesticated. Honest Indian agents are, in the Colonel's opinion, the great need.

The wild turkey theory of the Indian prevails generally among Western men. In answer to my question, not one of several experienced frontiersmen knew of an Indian whose education had not proved his ruin. "They are dying out," is the story on every side. My quotations of the results of careful investigation at Washington, showing that the reverse is the truth, were received with inward scorn. These men knew better. "Can't we see that they are going like the buffalo?" they say. They know of no civilizing forces except such as in past years have been seen here—a sad mixture of blessings and curses. I never was so glad of the present effort for Indians at Hampton and Carlisle. Never was a wise, sensible education of Indians more timely than now; but the effort should not terminate with with school life, but some fostering care should continue after they shall have been returned to their homes. They should be helped to positions and started fairly. Else the universal prophecy of relapse into barbarism may be fulfilled. The bottle is only half over when the Indian leaves school. So many Indians are improving through education; so many tribes are known not to be dying out; such facts showing the great increase of crops and stock raised by them are known, that we must credit part of this Western talk to fashion, and part to limited knowledge.

I showed photographs of Sioux Indians at Hampton as they appeared on arrival and as they appeared fourteen months later. There was surprise, because such results are not counted here among the possibilities any more than the transformation of a buffalo into a respectable family ox, or a wild turkey into a dignified gobbler. The West says of the Indian, "We must kill him off;" the East says, "Give him another chance."

MORMONISM AND SALT LAKE CITY.

Col. Majors, himself a Gentile and a Methodist, lives in Salt Lake City, has known the Mormon for twenty-two years, helped them move from under the fires of persecution twenty-two years ago in Jackson Co., Missouri, and says that the staple talk of their exhorters, and a powerful band of union to-day, is those former persecutions. But the younger Mormons have not the zeal of their fathers. Polygamy is doomed. When, ten years ago, the Mormon elders had a solemn gathering to consider what they would do in view of the severe McCullum bill before Congress for the suppression of polygamy, they turned to their prophet and said, "Brother Brigham, we wish your advice." He replied, "There is a bill that I fear more than I do the McCullum bill." "What one is that," they all cried anxiously. "My store bill" was his answer. The store bills run up by the Mormon wives since foreign wares and luxuries were introduced is the bane of the polygamist and the doom of the system. What the army of the United States could not do the milliner has done. Ribbons, and pretty hats have been more effectual than powder and shot.

In the simple days gone by, when all wove and wore homespun, the men providing food, and the women the clothing, the more wives a man had the better off he was. His boys and girls helped as they grew up: there was wealth in wives in our own ancient time. But what Col. Majors calls "gilt edged civilization" has changed all that. The Mormon women will have finery like other women; will buy imported goods and can't wear homespun; the men can't stand this; store bills are their ruin. Now the more wives they have the poorer they are. The young men go to mining, and many do not marry at all. There is now a sad state of morals among Mormon girls. There are however many decent families, for not over a tenth of the married men have more than one wife.

MORMONS AND GENTILES ARE INTERMARRYING.

May 31*st*.—I have just "done" Salt Lake City with the Rev. Mr. Barrows, a Congregational minister, an able and clear-headed man with six years' experience of the place. I have gathered from him the following impressions. The death of Brigham Young was not a serious blow to Mormonism, though as one can rule as he did. John Taylor, the leading officiel is a milder man. Polygamy will run out But the Mormon priesthood is a perfect organization, compact and strong as the Romanist priesthood. Every fifth man is an officer, and is watched by the other four who note any loss of zeal and not only push him up to his work but report to their leader who thus knows the heart of every disciple.

Young Mormons are seeing that their lot is illegitimate before the law, and in society is a hard one. They contrast their own position with that of others and are dissatisfied.

I saw the building, there is one in each district, where tithes, or one tenth of the gross receipts or productions of each Mormon, are paid in; this is part of their religion, but there is less faithfulness in this than formerly.

Rev. Mr. Barrows has been instrumental in opening an academy in the city which is attended to some extent by Mormon youth, and is scattering good seed through all this region. It is destined to be a centre of great influence. The population of Salt Lake City is about 25,000 of which 5,000 are Gentiles. The Jews here are classed as Gentiles, are unusually intelligent, contribute to the Protestant church and mingle in society more than elsewhere.

Utah has nearly 150,000 people; all but one-eighth Mormons.

A day here is delightful. The "Walker House" is a boon to travelers, with its tidiness and excellent fare. The streets are pleasant, being wide, lined with shade trees, and streams of water running down the gutters; not much architecture besides the grand new granite temple which is being built for their secret rites of marriage, baptism for the dead, etc. A Mormon who wishes to save the soul of his grandfather from perdition is immersed, by which vicarious process his ancestor is released from torture and placed in bliss. This is done for others; it has been done by them for George Washington, Jonathan Edmunds, John Wesley, and many more.

The Tabernacle is a marvellous whispering gallery. Across its two hundred and fifty feet of length and the space in which fifteen thousand people have been crowded, I heard a match drop upon the floor and an ordinary whisper.

One sees the "Amelia palace" of Brigham's favorite wife; the residences of the twelve apostles and their numerous wives, the great Mormon store with everything in it, Camp Douglas in the distance, and, if wise, will drive to the warm sulphur springs as we did, and take a plunge into the delicious water, which is followed by a sense of renewed youth and of blissful comfort. In summer there is a daily train to the Salt Lake, twenty-five miles distant, often taking five hundred people a day to bathe in the water that is so buoyant from its overcharge of salt that one floats like a cork. The effect is so pleasant as to fill a train daily for more than three months in the year.

Of the view from the hill overlooking Salt Lake City, Charles Kingsley wrote in 1874, "Such a mountain ring, three to four hundred miles in circumference—the loveliest scene I ever saw!"

Snow capped mountains, 12,000 feet high, overlook the town, the mass of shining peaks look like a grand cathedral.

While Mormons delight to tell how the army that was sent to suppress them in 1855 spent fifty millions of dollars in their country building up what they came to destroy, it is also true that this peaceful invasion was the entering wedge of Gentile ideas and the occasion of the Godheite revolt in the Mormon camp, broke Brigham's tyranny and was the beginning of the end of Mormonism.

Mining is a great interest here, and only in its infancy. Manufactories will spring up, railroad fares will always make a protective tariff. Utah will fall in line with the age.

June 2*d*.—Within an hour San Francisco. Westruck Chinese a long way back in Nevada. They are well worked into the industries of this region. They do not seem numerous enough to make trouble. Nevada is the dreariest State we passed through. It seemed Egyptian in its desolation, determined against progress, to defy modern improvement. It is, I suppose, a question of irrigation. Green river banks winding among the bleak hills made their barreaness more striking. Much fine scenery was missed, being passed in the night.

It is twenty years since I saw the Pacific Ocean, after passing twenty years within sight and sound of its waves. I shall soon come to it and will exclaim like Xenophon's Greeks, "The sea! the sea!"

MR. J. C. ROBBINS, whose monthly record of "Incidents of Indian Life at Hampton" have formed an interesting part of the SOUTHERN WORKMAN and whose faithfulness and ability in the instruction and care af the Indian boys have contributed much to the success of the work for them, has been appointed by the American Baard an assistant missionary and teacher at the Santee Agency, Dakota. This closer contact with the Indians and opportunity to learn their language will no doubt be af great advantage in fitting him for the work to which he has devoted himself. In leaving Hampton, Mr. Robbins takes with him the friendly esteem of its officers and their best wishes for his success in his new field. His successor at Hampton will be another of its graduates, Mr. Booker Washiagton, of West Virginia.

LETTERS FROM HAMPTON GRADUATE TEACHERS.

FROM OUR MISSIONARY TO AFRICA.

COLD WATER TO A THIRSTY SOUL. A MISSIONARY SHARPSHOOTER PROSPECT-

Whan I returned with the bird, all came and looked, and laid their hands over their mouths and said in their tongue, "That was the black gun bad"—meaning, well. Whenever I passed that place after that, I was known as the "man who sabby gun."

By this time the chief had arrived, and after

ple. Because they have been in the mission and have been kept from these things till ber, with forty or fifty pupils, and before I [illegible] they are like a pig into slops both head and feet.

I see that I cannot write you all I want to, for if I do my letter will be too heavy for the mail to carry as a letter. I shall ask every one of you who read this dear schoolmates to write

from ——— and opened the 1st of last October, with forty or fifty pupils, and before I [illegible] I had increased it 50 per cent. We have now on roll 130, with an average attendance of 100; and would have more, but some of the people here are too poor to buy clothes for their children, much

LETTERS FROM HAMPTON GRADUATE TEACHERS.

FROM OUR MISSIONARY TO AFRICA. COLD WATER TO A THIRSTY SOUL. A MISSIONARY SHARPSHOOTER. PROSPECTING FOR A MISSION STATION. EDUCATED HEATHEN. A SCHOOLHOUSE IN VIRGINIA. A PLEA FOR BOOKS. MAKING HASTE SLOWLY. GONE TO KANSAS.

FROM OUR MISSIONARY.

Before this letter leaves the press we hope to have a second and perhaps a third missionary graduate in Africa or on the way. We hope they may be as earnest workers as their predecessor, who is completing his third year of faithful service. It will cheer his heart to feel that he has comrades in the field; but it is a broad one, and they will be so far from his station that they may never meet. His old schoolmates will not be able, we trust, to resist his appeal for letters, which are like cold water to a thirsty soul, to a missionary toiling among strangers in a far country.

To the Graduates of Hampton.

MENDI MISSION, SHERBRO IS., WEST C. AFRICA, *April* 16, 1880.

Dear Schoolmates:—

To-day I have had no school, as it is Friday, and we only have school four days in a week; so I thought of spending a part of my time in talking with you. Some time ago I wrote you a long letter, and did hope to hear from many of you by so doing; but I failed to hear from even those of you to whom I wrote direct. But notwithstanding your forgetfulness of me, I can never forget you, and those happy days which we spent together at Hampton. Our Friday evening prayer-meetings and our Saturday night Debating Society are two pleasant thoughts in my mind. The hymn which we used to sing so often, "From Greenland's icy mountains," is still a lovely one to me; also, "From every stormy wind that blows," and the verse which says, "Though sundered far, by faith we meet around one common mercy seat." Yes; I feel that I can meet many of you at that "mercy seat," while we are said to be 5,200 miles apart, and some, more.

It will soon be three years since I left Hampton, and since then I have seen *many* strange things. I have made many new friends, even in the wilds of Africa, where they don't know one day in the week from another. But when they come where I am they always seem glad to see me (those who have seen me before), and treat me kindly. This is caused by treating them kindly. Whenever a countryman comes where I am, *i. e.*, if I am at home, I always have a word for him. If he cannot speak English I show him something, a picture or a book, to let him know that I am interested in him. They love to look at your watch, or anything you have which came from America.

PROSPECTING FOR A MISSION STATION.

On the 12th of January last, Dr. James and I left this station to go into the Mendi country to look out for a place for another Mission Station. We had five men to man our boat, and after we had gone a good way, the tide was hard against us, and we anchored about 10 o'clock in the night to wait for the tide. About 4 o'clock A. M., 13th, we had the tide good, and we started on. We sailed till about 4 o'clock that afternoon, when the tide was again against us, and we stopped at a town on the river called Mogumbo. We put up here for the night, as we wanted to see the chief, who was not at home but was expected early the next morning. I got my name up here at this town as a mighty shooter. We got up and had our man make us tea about 6 o'clock A. M., with the view of taking a hunt before the chief got home. And just as I came out from the boat (for we slept in the boat) I saw a pigeon pitch in a tree near the town. I fired and killed it. I went out and walked, I guess, about five miles, and only shot one more. When I got back to the town there was another sitting in a tree near the place where I shot the first. The people came out to see me shoot it, for they never kill a bird or anything unless they can almost touch it with their gun. I fired, and killed it also. Shortly, another came and pitched in the bushes near me, and they called out to me, "Massa, Massa, try him." Once more they gathered to see me shoot, which I did, and killed that one also. While my boy was getting it, I heard a bush-fowl making a noise out behind the town. I went to look for him, and saw him sitting upon an old tree which had lost all its branches, so he could see me from any direction. These birds are large as a hen, and very wild. I could not get close enough to him to kill, and I thought best not to shoot unless I killed, for I didn't care to get my good name down so soon. But I knew that my gun was good, being a breech-loader, and would kill a long way; so I said I would try from where I was, and to my surprise as well as joy, the bird fell at the crack of the gun. When I returned with the bird, all came and looked, and laid their hands over their mouths and said in their lingo, "That man can shoot gun bad"—meaning, well. Whenever I passed that place after that, I was known as the "man who sabby gun."

By this time the chief had arrived, and after a long and mournful cry was over (for he had been to the burial of his son, who lived at another town and had died), we were invited to see him. After a short talk with him, we got our breakfast and left. As I have said, this chief had been to the burial of one of his sons, and when he got back all the women went out and sat around him, and yelled and cried to show him that they were sorry with him about his son, and truly they cared no more about his son's death than you who never heard of him.

We left there about 8:30 A. M., and reached a town called Cuncannna, where we were to make our headquarters, as it is the safest place in the Mendi country as the British Government keep a police force there. Having sent word to Mr. Hays, who was a trader there, but has gone since, that we were coming, he soon had us a house made ready, and a kid dressed for our dinner. After we had rested some, we went around through the town to see the people, who seemed very glad to see us, as Mr. Hays had told them that we were going to bring the mission there.

The next day we visited a town called Dodo. This is a walled town, having three walls, but very unlike those around Jerusalem, for they are made of wood—poles which are put in the ground upright, and are about twelve feet high. There are three sets of these, making a complete fence each. The chief here is very savage indeed; he is very large in size and is much feared by the country people. He has about twenty-five or thirty wives; and whenever he sees a man with a wife which he would like to add to his number, he only has to say so, and the poor man must give her up or he (the chief) will cause him to be put to death or sold into slavery. He is a Sherbro man; his name is Mr. Humper Ranco, and he is truly a heathen. He is a *bad*, BAD man. We saw him and had some talk with him about having a mission near him, and he seemed willing to give a place for the mission. But such a bad man cannot be trusted, for some night he might come down with his war troops and clean the whole mission out.

We returned to Cuncauma that same day, and the next day visited another town by the name of Mocumbra. Here we did not see the chief, because when he heard that we were coming he ran and hid, thinking that we were policemen from Cuncanana coming to take him to the Governor. The Governor had sent word in the country to all the chiefs that he wanted to see them, and would let them know when to meet him at Bonthe (Sherbro Island). This place is a nice place, and all the people looked neat and clean. We talked with them, and found that they were of the Timny tribe. As the chief was away and did not come while we remained, we could get no answer about a place for a Mission Station.

EDUCATED HEATHEN.

Mr. White's reflections upon the importance of keeping a hold upon the converts from heathendom, show good judgment and observation. This is the point of strain in all missionary work, and has often been the point of failure. It is the point to be looked out for in the new departure in the Indian work, and the hopefulness of the effort is, to a great extent, in the better appreciation of this point by the Government and the people, and the better surroundings to which the students will return than existed fifty years ago.

We went to many other towns which I shall not be able to tell you about in this letter. But from what I saw and learned about the country and people, I don't think that Africa will ever be civilized by sending out a few missionaries here and there. The only hope for Africa as a whole is to send out companies of good Christian people, and plant them here and there, and let them bring in the native children and train them in Christian habits, and when these have become men and women, let them go out and teach their people; but missionaries must lose sight of the heathen for they are too weak to walk alone. Take a native boy and train him in the mission, and after he has been somewhat educated turn him out to root hog, or die, and the first thing he thinks about is selling rum and tobacco. You may tell him that he should be a missionary, yet do no more to make him one, and in a few years you cannot tell that this boy has ever seen a school or a mission house. An educated heathen is the worst in the world, and I am sorry to say that we have many of them here with us. Those who are doing anything, and have kept themselves like men, I can count na the fingers of my left hand; and only one is doing missionary work. And why is it? It is that the mission has given them something which there is no demand for, and as there is more demand for rum and tobacco, they cling to the thing they can make a living with the best. If we were in colonies instead of mission stations, we would be able to give these young men and women work to do, and not allow them to fall back into the habits of the country, in some even worse than the country people. Because they have been in the mission and have been kept from these things till now, they go into them like a pig into slops, both head and feet.

I see that I cannot write you all I want to, for if I do my letter will be too heavy for the mail to carry as a letter. I shall ask every one of you who read this, dear schoolmates, to write me a line. I shall be so glad to hear from you all. I have not heard from a good many of you since I left America, which will soon be three years.

I hope that when you pray you will remember your lonely schoolmate in this benighted land.

Hoping to hear from many of you soon,
I am ever, your schoolmate,
ACKREL E. WHITE.

A COUNTRY SCHOOL IN VIRGINIA.

A turnout similar to that described in the following letter, a common sight on a Hampton market day, is decidedly more picturesque than luxurious, but our readers will doubtless enjoy the experience in imagination.

Dear Teacher:—

I suppose you would like to know how I am getting along in my new home. I arrived at —— on the 6th inst., about 12:30 o'clock, and was examined at 5, I finished my examination about 6 o'clock, and then started for my school, about thirteen miles off, in company with ——, a graduate of the Class of '77. We had to travel in an ox-cart drawn by a little donkey about three sizes smaller than Old Jane, Mr. Bailey's mule. Our whole journey was traveled in the dark, and through the thickest pines; also, we were nearly frozen when we arrived here. On our arrival we were set down to a nice country supper, and as I had eaten nothing since morning, you can imagine how it disappeared from before me. After supper we talked of Hampton a few moments, and then took ourselves to bed.

On Saturday I visited my school-house, situated a few yards from my boarding house, and surrounded by towering pines and thick shrubbery. It is built of logs, as you might expect, and is about the size of Miss ——'s recitation room. It has an old-fashioned, country fireplace, such as Mr. Lowell speaks of in his poem on "Courting." I have to get my own fuel or do without it, as the school board does not see to it. My house needs no ventilation, for there are cracks in the wall large enough to let a cat through.

On Sunday, I went to Sunday-school a few miles from my boarding house, and had so many crowd into the room, that I was called to conduct the meeting; about this time Miss —— came in and assisted me; we sang a piece from the Moody and Sankey books, and then I led in prayer. After prayer I took charge of the Bible class and taught them from the SOUTHERN WORKMAN, Sunday-school Edition.

On Monday, I opened school by reading the 4th Proverb, had prayer, and spent the most of my time in organizing, and have not finished yet, as all the children have not come, and many that are here are not provided with books. I have on roll to-day eighteen, and by next Monday I expect twenty-five more. I am in need of a few picture papers to paste upon the walls; if you have any you can send them; I will be very glad to receive them.

Please give my regards to all my Sunday-school classmates. I shall be glad to hear from you at any time.

From your obedient scholar, R.

A PLEA FOR BOOKS.

The writer of the following letter is one of Hampton's best graduate teachers, and his wife is another. His faithful work deserves every encouragement. The plea for Bibles and Sunday-school books and papers is a very common one. We respond as far as possible, and could easily distribute with great benefit many hundreds more every year.

NEWS FERRY, HALIFAX CO., VA., *March* 14, 1880.

Miss L.,

My Dear Friend:—As it is raining today and I have not been able to have any Sabbath School, I thought I would write you a few lines to let you know that I have not forgotten you all. I hope you will excuse me for not writing to you before now. I went out to Illinois last summer to see my mother and sisters, and was quite sick while out there; did not get home until just a few days before Xmas. I am still teaching, but not in the same place that I have been for the last three or four years. Money is so scarce down here that they were not able to have school at my old station, so I had to change. I had gotten so attached to my old pupils that I hated to give them up quite as badly as they did me. And, by the way, some of them are so determined on getting an education that they are still coming, walking five or six miles per day. Well, I took the school here with the understanding that my wife should be my assistant. I being away when the time came for the school to commence, in order to get in ten months, she came down from —— and opened the 1st of last October, with forty or fifty pupils, and before I had gotten home it had increased 100 per cent. We have now on roll 130, with an average attendance of 100; and would have more, but some of the people here are too poor to buy clothes for their children, much less books, slates, etc. Our Sunday-school, too is quite large; but we are unable to make it as interesting as it would be if the people were able to buy Bibles, papers, etc. If you know any one that would send us a few books I wish you would be kind enough to tell them of us. There has been a great deal of sickness here this winter, also many deaths.

Give my best love to Miss M. and all the rest of my old friends down there. I must close, hoping to hear from you soon.

Yours, &c., D.

SCHOLARSHIP LETTER.

The following is one more of the "scholarship letters" written yearly by every member of the school to the friends whose contributions of scholarships of $70 a year meet the schooling of most of those who come to Hampton Institute.

FROM A MIDDLER.

(The following letter is by a young girl of the Middle class.)

Dear Friend:

I am informed that all of the new students are requested by General Armstrong to give a sketch of the history of their lives, which I will try to do. I was born in Virginia, March tenth eighteen hundred and fifty seven. I had three brothers and a sister. My parents were slaves. I know very little about slavery, for I was very young about that time. I will tell you a story which my parents used to tell me. My father and mother did not belong to the same man; but they were not any great distance apart. After a while my father's master died, of course after the master is dead, the slaves being considered as property must be divided as well as the rest of the estate. The day came for each of the heirs to have his or her share of the property. It so happened that my father, his mother, and sister, fell to the heir that wanted to go to Mississippi, and carried all of his number of slaves, but my father said he would not go, and ran away, that being his only method of escape. My father came home after the heir was gone, and was sold to a gentleman who lived in the village of ——. Then my mother could not see him but once a month.

I will now give you an account of an incident that I witnessed. One day just about noon, I saw a vast number of colored soldiers coming down the road. They marched into my master's yard. The captain rode around to the several quarters of the slaves, asking them did they want to be free; and commanding them to get ready and go with him. Some of the slaves on hearing that they were free, shouted for joy, while some of the others felt quite sad, because they did not know where they were going, and to whom they should go for support. In a short time, the slaves, with soldiers and captain, were on the road, traveling to where they knew not. The whole company not traveling very fast, did not get any great distance from the place from which they last started; consequently the whole company had to camp out of doors all night; their only shelter consisting of a camp made of bushes. The slaves traveled on in this way for three days and nights. On the morning of the fourth day, they arrived at the village where my father lived. There my father was waiting to receive his wife and his dear children. He knew that we were coming, so he made preparations for us.

In a few days we were comfortably situated in a nice little house, which my father had prepared.

A school, called the government school, was going on about four miles from my home. My parents being very anxious to have me go to school, sent me to the above named school.

I was so delighted with the school that my walk did not tire me. In a short time after this, another school began that was nearer to my home. I then went to the nearer school. My first and my second teacher were both white. I was very fond of Miss Sarah, and I felt quite sorry when she told me, that she was going home. I had a great many colored teachers. One, a gentleman from the West Indies. He was a good intelligent and smart teacher. I was more fond of him than any teacher I ever had, because he always took such interest in his pupils. He was the only one that had ever taught me anything about arithmetic. About this time my father died, and I was left a fatherless child with an afflicted mother. Mr. ——, the County Superintendent, was interested in me, and advised me to come to this school. I feel very thankful to the kind friends at the north, for their liberality to us. I hope the Lord may always smile upon you.

Yours Respectfully G.

OFF FOR BERKSHIRE.

Twenty-five of the Indian students of Hampton, seventeen boys and eight girls, started for their summer homes among the hills of Massachusetts, on Monday, June 14th. They will be scattered on neighboring farms, the reason I sent you to school to learn and be like a white girl. Your father,
"BLACK CROW."

EFFECT ON INDIAN OF SENDING THEIR CHILDREN TO SCHOOL.

Bear's Heart, breakfast. Then I told my friend after breakfast you come again we go shooting again. I had buffalo meat just one for breakfast. I will tell you how my home look, Indian bed just on ground. My father and my mother have a bed one side of wigwam; I and my brother other side, and my very good. Two years I stay St. Augustine, then come to Hampton. At Hampton I go to school and I work. I like school and work. I don't want to go home just now. I want learn more English, more work and more of the good way. When I finish my school here, I go home to teach my people to work also. I want my mother and sisters

OFF FOR BERKSHIRE.

Twenty-five of the Indian students of Hampton, seventeen boys and eight girls, started for their summer homes among the hills of Massachusetts, on Monday, June 14th. They will be scattered on neighboring farms, where they will share the home life and be kindly cared for, doing light work for their board, and under the general supervision of Mr. Alexander B. Hyde of Lee, one of the school's trustees. This was proved last summer to be a very valuable part of the year's experience, invigorating their health, improving their English, and broadening their outlook.

The trip to New York, on the fine new steamer *Manhattan* was pleasantly made, spite of some rough weather, and the day of sight seeing in New York was full of interest, both to the students and those who were enjoying their interest. Central Park, with the Zoo, and the Mall, the Post-office and Equitable Building with the splendid view of the city and harbor from the top, and a free ride to High Bridge and back to the Battery on the Elevated Railroad by courtesy of the company, were among the experiences whose wonder and delight merit a further description.

A reception was given them at the Y. M. C. A. Room at noon, where short speeches were made by Gen. Clinton B. Fiske, and Mr. Smiley, Indian Commissioners, Rev. Mr. King of Harlem and Rev. Mr. Bradford of Montclair. General Marshall and Mr. Robbins spoke on the part of the school, and the students contributed a hymn, "Nearer, my God, to Thee," sung in Dakota, and a dialogue in the sign language.

At eight the next morning the party left for Stockbridge, the railroad companies kindly allowing them half-fare. We may hope next month to hear a good report from their country homes, with more graphic details of their trip there.

LETTERS FROM INDIAN PARENTS TO CHILDREN AT CARLISLE.

Through the courtesy of the Department, copies of some of the letters referred to by Capt. Pratt in our last number, have been sent us from Washington, of which the following are a few interesting extracts:

"DARLINGTON, IND. TY. (Cheyenne and Arapahoe Agency.) *Feb.* 5, 1880.

"*My Dear Son:* I received your kind letter and was mighty glad to hear that you are trying to learn how to read and write. Don't play much. Study your lessons. I sent you to school to learn English. I shall be happy to see you when you come home so that you can write letters for me to my friends. I am on white man's road now. Be good boy. I will send you more things.

"Your father, BIG HORSE."

"PINE RIDGE AGENCY, DAKOTA, *March* 8th.

"*My dear daughter:* It made my heart very glad indeed when I received your picture. I think that it is a very good one. I made a feast and called all our friends and neighbors to see the picture. I bought twelve yards of calico and made a present to every one who came to look at your picture. I bought pumpkins and other things out of the store, about ten dollars worth, and we had ten kettles full of food for our friends who came to rejoice with us. It makes me very glad to think that you are so well taken care of and so happy. I trust that I shall be able to come and see you this summer. Our agent when he left here to go to Washington said he would ask the President to let all the men who have sent children, go on to see them in the school.

"Your father, LONE BEAR."

"PINE RIDGE, D. TY. *March* 24th.

"*My dear Grandson:* I wished you to grow up a wise and useful man, so I sent you to the school. There are four of us in the band which rank alike as chiefs, and I trust that Capt. Pratt will be able to make you a leading man. Your grandfather,

"N. WATER."

"ROSEBUD AGENCY, DAKOTA, *March*, '80.

"*Looking Woman—*

"*My daughter:* You went down to the school to learn to read and write and how to do housework. I hope when you come back you will know all the ways of the white people, so you can show us how to take care of a house, and read English books for us. Your father, BIG HEAD."

"ROSEBUD AGENCY, *Dec* 31*st*.

"*My dear Daughter:* I am very glad to hear you are well. I sent you there to learn to read and write and sew. I want you to write to me in English in your own hand as soon as you can. I listen to the white men because they are wise men. Tell your brother, I want him to learn fast and he a good boy. My daughter, you are such a good girl, that is the reason I sent you to school to learn and be like a white girl. Your father,

"BLACK CROW."

EFFECT ON INDIANS OF SENDING THEIR CHILDREN TO SCHOOL.

The real effect upon Indian parents of sending their children to a "white man's school," no one need ask who reads the following letters:

"PINE RIDGE AGENCY, DA., *April* 15, '80.

"*My dear Son:* I send my picture with this, you see that I had my War Jacket on when taken, but I wear white man's clothes and am trying to live and act like whits men. Be a good boy. We are proud of you, and will be more so when you come back. All our people are building houses and opening up little farms all over the reservation. You may expect to see a big change when you get back. Your mother and all send love.

"Your affectionate father, CLOUD SHIELD."

"ROSEBUD AGENCY, *Jan.* 4, '80.

My dear Daughter: Ever since you left me, I have worked very hard and put up a good house and am trying to be civilized like the whites, so you will never hear anything bad from me. When Capt. Pratt was here, he came to my house and asked me to let you go to school. I want you to be a good girl and study. I have dropped all the Indian ways and am getting like a white man; and don't do anything but what the agent tells me. I listen to him.

"I have always loved you and it makes me very happy to know that you are learning. I get my friend Big Star to write for me. If you could read and write, I should be very happy. Your father, BRAVE BULL.

"Why do you ask for moccasins. I sent you there to be like a white girl and wear shoes."

YANKTON AGENCY, D. T., *April* 5, '80.

Gen. Armstrong:

My Friend: I never saw you, but I have already a strong attachment for you. I already wrote you two letters, as you know, but to-day I have thought of you again.

I had two boys big enough to help me work, but you have them now. I wanted them to learn your language. And I want you to look after them as if they were your boys. This is all, thy friend.

FAT MANDAN

Is my name, and I shake your hand.

INDIAN TALK.

BY BEAR'S HEART, CHEYENNE INDIAN, FROM INDIAN TERRITORY.

We publish by request the "Indian Talk" given at the Hampton Normal School Anniversary by one of the Indian students, the last one left at Hampton of the Indians from St. Augustine, the rest being at Carlisle or at their homes.

It is entirely original. Bear's Heart was three years at St. Augustine, and has been two at Hampton.

SOMETHING ABOUT MY LIFE.

"When I was a little boy, I got out bed, may he six o'clock every morning. I go out Wigwam, wash face, go back in Wigwam. My father comb my hair and he tie it then he paint my face good. Then my father said you go shoot; my little friend come and I said to him let us go and shoot. When Indian cooking, my mother she say Come here, Bear's Heart, breakfast. Then I told my friend after breakfast you coma again we go shooting again. I had buffalo meat just one for breakfast.

I will tell you how my home look, Indian bed just on ground. My father and my mother have a bed one side of wigwam; I and my brother other side, and my sister another side, and the door on one side. The fire is in the middle. My people sit on bed, and my mother she give us a tin plate and cut meat, we have one knife no fork hold the meat by the hand, eat with knife. After breakfast I go shooting with my friend. I eat three times every day. Sometimes two times when not much meat. All the time meat, that is all. I no work, I play all the time. After a while I big boy. My father he said, Bear's Heart you try kill buffalo now, I say yes. When Indians went buffalo hunting I go too. One time I shoot twice and kill buffalo. I skin buffalo and put skin and beef on my horse. I took to my wigwam. My father he say Bear's Heart, how many times you shoot. I say ona time. He say good. When I big boy my father give me gun and I shoot deer. All the time I shoot, I done no work. My mother and my sisters do work. When my father died I was a bad man. By and by about twenty Indian young men went to fight Utes. I told my mother I want to fight to, and she said yes. I go and fight all day first time, we killed one Ute and four Cheyenne. Sundown we stop. In Texas I fight again. In Texas all time fight no stop, some fight, some take horses. In the summer I fight, in the winter no fight. One time I went to a big fight. I fight then I got tired. I say my two friends let us go back to agency; my friends they say yes. We went to Agency, tha Capt. take to us, he say, Bear's Heart what you want to do, fight or stay here. I said stay here; all right say he 'go to wigwam.' About one month after, Cheyenne chief he tell agent Bear's Heart had been fighting so he is bad, then the Captain put me in the guard-house. By and by the Captain he sent my two friends to tell all Indians to stop fight and come to agency. All Indians come back then Cheyenne chief he looked at all Indians and told Captain what Indians fight, the Captain put bad Indians in guard-house, and colored soldiers put chains on their legs. One man he got mad and run, the soldiers shoot but no kill him. By and by good many soldiers come from Fort Sill and took us to Fort Sill, where I saw Capt. Pratt. Good many Kiowas, Comanches and Arapahoes, Cheyennes all together with soldiers and Capt. Pratt take us to Florida. When I ride to Florida all the time I think by and by he kill me. When I been to St. Augustine some time and womans and mans come to see me and shake hand, I think soldiers no kill me. After awhile Capt. Pratt took off all Indians chains, but not too quick. Capt. Pratt he see boys no have money. He got sea beans, he give every Indians two sea-beans, he say make sea-bean shine, ha told us bow and when wa make sea bean good we take to him, ha give us money. First time wa make sea-beans, then bow and arrows, then paint pictures. By and by teacher she come with pictures of dogs, cats, cow and tell us every day nine o'clock morning we go to school stop at twelve o'clock, afternoou just make sea-beans. Before Indisus went to school, Capt. Pratt he gave Indians clothes just like white men, but Indians no want hair cut. Sunday Indians go to church St. Augustine: down from head, Indians same as white men; but heads, long hair just like Indians. By and by after Indians go to church, they say I want my hair cut; my teachers very good. Two years I stay St. Augustine, than come to Hampton. At Hampton I go to school and I work. I like school and work. I don't want to go home just now. I want learn more English, mora work and more of tha good way. When I finish my school here, I go home to teach my people to work also. I want my mother and sisters to work house, and I and brother to work farm. When they put chains on me to take me from my home, I felt sorry, but I glad now, for I good boy now.

Correspondence.

CHEYENNE RIVER AGENCY, D. T., *May* 28*th*, 1880.

Editor of Workman:

Enclosed please find subscription for WORKMAN. I desire to keep posted on the advancement of the Indian children, as the parents of those from this Agency are constantly making inquiries of me as to the welfare of their children.

There is an increasing interest taken in your school by the Indians and I believe tha tima is propitious for the establishment of a thorough system of educational training, which alone can accomplish the reclamation of the little barbarians.

Without an early industrial or educational training few white men or women ever attain a position of usefulness in civilized communities, on the contrary they become as a class, hurdens upon the commonwealth and evidence by their life and conduct, the wisdom of the establishment of Poor Houses, Houses of Correction and Prisons for their accommodation and safe keeping.

It is absurd to expect a different state of things among a barbarous people. To render them useful members of society, the Indians must not only be converted to Christianity, but also to habits of neatness, order, industry and respect for regularly constituted authority. That you realize this fact is evidenced by the thorough manner in which you are inculcating these ideas in your system of Christian, industrial and educational training at Hampton, in which arduous undertaking you have ever the earnest sympathy and sincere good wishes of your friend,

GEO. LEE. BROWN.

SALT LAKE CITY.

VISIT TO COLORED SCHOOLS.

BY ORRA LANGHORNE.

A few days ago, I collected some numbers of the SOUTHERN WORKMAN, already well-thumbed by tha colored neighbors, to whom I usually lend my papers, and wended my way to Miss Harvey's school, to see if I could find any subscribers among her pupils.

Miss Harvey is a Virginia lady, who was deeply impressed with tha horrors of slavery in her childhood, when her father's servants, owing to his having been unfortunate in business, were sold for debt. The sorrowful scene, when the beloved old nurse was carried away by the sheriff, and her mother, overcoma with grief lay fainting on tha threshold of the dismantled home, was never to be forgotten by a sensitive heart. Left an orphan at an early age, Miss Harvey struggled bravely for the education which could fit her for teaching, and since tha war she has done excellent work in the colored schools in which she takes a most kindly interest.

Visiting schools is one of my amusements, and I am constantly impressed with the fact,

that there are two kinds of teachers, those who love their work, and those who love their wages, and an hour spent in a school-room will tell to which class the teacher belongs.

Miss Harvey is one of those truly called to to teach, and a glance at her attentive, orderly scholars shows the observer that she realizes the importance of the teacher's office, inclined to claim superior intellect for themselves. The event in point was rather puzzling to most of the pupils, who, as Miss Harvey explained, were too young to remember slavery or know much of politics. "What is the difference between the Declaration of Independence and the Emancipation Proclamation?" Some assistance from the teacher was necessary to make a clear answer from the children, of the colored Public School have took place at a time so near that at which we go to press; for the excellent performance of their programme last evening in the Methodist church deserves a special and detailed notice. Every body was surprised at the advancement the scholars have made, and the high order of the exercises gramted the entire audience (the gallery was filled with white visitors) beyond mense concourse of voters could be assembled, provided the usual waves of partizan persuasion were not forgotten.

Party lines are but faintly drawn at present, and probably the controlling vote lies in the hands of that "great middle class" not blindly attached to either party, and who will vote, party on what they believe to be the winning side, and partly on the personal pop-

that there are two kinds of teachers, those who love their work, and those who love their wages, and an hour spent in a school-room will tell to which class the teacher belongs.

Miss Harvey is one of those truly called to teach, and, a glance at her attentive, orderly scholars shows the observer that she realizes the importance of the teacher's office.

Instead of the switch or ruler, which so often forms the badge of office with instructors, her table is covered with plants and minerals, the nature of which "Miss Fanny" carefully explains to her pupils, and the interest she children show in collecting such things testifies to the confidence and affection they feel for their teacher.

When I reached the school building, which is a somewhat dilapidated frame house, poorly furnished as to desks and blackboards, and was the first school-house opened for colored people here after the war, the funds for it having been given chiefly by Philadelphia Friends, I found the children playing in the yard, it being still a half hour to school time. Miss Harvey soon arrived, and invited me into her room, whither many of the children followed, it being one of her rules that orderly pupils may go to their desks before the bell rings, and write on their slates what they have seen on the way to school. This cultivates observation with the children and the slates are read in turn by the teacher or pupils. Almost every object visible on the streets that morning had been recorded by some of these young reporters, and one bright little girl, with an eye to the beauties of nature had noted more than twenty names spelling such long words as Calecanthus, Arborvitæ, etc., correctly.

Before all the slates had been read the clock pointed to 9, and "Miss Fanny," who is the soul of punctuality, rung the bell. This was the signal for the three other grades which are taught in this building to enter and join in singing a hymn and repeating the Lord's Prayer. When the schools are full more than three hundred pupils, ranging from five to sixteen years old, meet thus daily. The classes came in quietly and at once fell into line, and when Miss Harvey gave the word, began with clear, sweet voices to sing the popular hymn—

"The ninety and nine all safely lay,
In the shelter of the fold."

There was wonderful variety of appearance among the groups of singers, and one might readily trace the mingling of many families of earth in the faces ranging from the sooty sons of Ham, to the fair complexion of the Caucasian, with scarce the "shadow of the Ethiopian" upon it. Some of the children of darkest hue, had long silky hair, telling of what the Negroes here call "Mollygaston" (Madegascan) blood, and here and there one bore traces of Indian ancestry. As the clear young voices rung out the choruses, and many dusky faces turned earnest eyes toward me, I could but think of that promised day, when "all nations shall be one people and God himself shall be with them and be their God," and felt that the Shepherd had indeed "Gone to the desert to find his sheep," in thus gathering these children of an alien race into the common brotherhood of citizenship in our western land. After the singing the other grades quietly dispersed to their rooms, two of the young teachers being colored girls, the first colored teachers employed in the public schools of the city. Miss Kinekle is a graduate of Howard University, and a teacher of several years' experience in country schools, and Miss Merchant, a graduate of Hampton, whose face lighted up with pleasant memories as I asked her about her teachers at the Normal School.

When her pupils were seated Miss Harvey began her regular exercises, and after hearing some very good recitations in grammar and arithmetic,—the latter seeming to possess a remarkable knack of keeping the attention of all the scholars on the subject in hand,—I requested permission to ask the children some questions not down in the book, and began by inquiring where the money came from for the public schools? "Taxes" was the prompt answer of many of the. "Who pays the taxes?" I asked. "Everybody," "Fathers and mothers," "Parents," came quickly from all parts of the room. "Do you think people who have no children should be taxed to support the schools?" was the next query. This was a new idea, and after some hesitation the children answered in the negative. I told them I did not agree with them and asked what children ought to do in return for being educated by the State. "Learn well," "Be good students," "Make useful citizens," said many voices quickly. "What benevolent man bequeathed a large sum of money to aid Southern education?" asked the teacher at this point. "Mr. Peabody," said several pupils. "Which have the best minds, boys or girls?" was my next question. "Boys," was the prompt answer of every boy in the room, accompanied on the part of some of the complacent youths with a rather contemptuous glance at the girls. The little girls were slower to decide, and few seemed inclined to claim superior intellect for themselves. The next inquiry was rather puzzling to most of the pupils, who, as Miss Harvey explained, were too young to remember slavery or know much of politics. "What is the difference between the Declaration of Independence and the Emancipation Proclamation?" Some assistance from the teacher was necessary to gain a clear answer from the children, one of whom said at last, "The Declaration of Independence was for the whites folks and the Emancipation Proclamation for the colored people.

Upon the whole I thought the school displayed remarkable quickness in answering questions quite apart from their regular routine of study, and showed that their instructor was very wide awake herself, and could rouse the minds committed to her care in no ordinary way. She takes much pains to teach her pupils botany, mineralogy, astronomy, and other branches of natural science, and showed me many beautiful specimens of the wonders of nature brought her by the children. While hearing the school tell the names of the planets visible during the present month, I could but realize how different would be the impression produced upon the rising generation of Negroes by the phenomenon of nature from the ideas common to their less cultured parents, to whom each flash of lightning, every blazing comet is a fearful threatening of Divine wrath, portending the dissolution of earth and its inhabitants.

Some of Miss Harvey's pupils draw very well indeed, and I found many pretty pictures of plants, birds, etc., on the blackboard, and thought a spirited sketch of a ship in full sail, drawn from memory by a youth named Thomas Jefferson, displayed considerable ability in the young artist. The colored children generally are under the usual disadvantage of poverty, a great many of them being compelled to lose much time from school to work in the Tobacco factories, their wages being, very often, an important part of family support.

GLOUCESTER CO., VA., *May 28th*, 1880.
Editor Southern Workman:

The school taught in this part of the county by Mr. William Weaver a Hampton student, had its closing exercises to-day. An invitation to the closing exercise had been extended to the people in this part of the county. As early as eight o'clock, parents and children began to gather from every direction, at the school house, which was a large frame church by the roadside in the wood. Each one brought a basket of provisions, either a cake, a chicken or something in that line.

When the school opened at ten o'clock several hundred people had assembled. The time from ten till twelve o'clock was spent in the examination of classes. Considering the short time the children have spent in school they showed that they had well improved their chances. The recitations of the classes in arithmetic and reading by the word method were very creditable. The parents showed deep interest in the examinations. Many of the most intelligent class of the white people, including some of the county officers, were present throughout the day and seemed well pleased with the school.

The time for refreshments was over at two o'clock; from two till four was given to declamation, dialogues and singing by the children, each of whom tried to excel the other. At night, after several declamations and dialogues by the children, a lecture was given to the parents and friends by Mr. B. T. Washington.

This being the close of the free school, Mr. Weaver said that the people showed such an interest in education that he wanted to continue their school a while longer; so the entertainment at night was given to procure means for that purpose. A small admission fee was charged which was willingly paid. The amount necessary to continue the school at least a month longer was raised.

It is very gratifying to witness the interest these people are taking in education. All day long they seemed perfectly delighted. Many of the people came eight and ten miles and returned at night. They say that their eyes are just being opened and they now see the benefit of education.

All agree that they never had a teacher before take such interest in their children; they have great faith in him and believe he is working for their true interest. B.

A GOOD REPORT FROM ABINGDON.

We have received from two Hampton graduates, Mr. B. L. Langford, and Mr. Frank Trigg, the programme of the closing exercises of their school in Abingdon, Virginia, with two of the local papers, the *Standard* and *Virginian*, containing very kind and complimentary notices of the occasion. The *Standard* (conservative) says:

"We regret exceedingly that the exhibition of the colored Public School here took place at a time so near that at which we go to press; for the excellent performance of their programme last evening in the Methodist church deserves a special and detailed notice. Everybody was surprised at the advancement the scholars have made, and the high order of the exercises gratified the entire audience (the gallery was filled with white visitors) beyond expression. The singing of the children excels that of any of our Sabbath Schools, and the recitations and essays were fully up to many schools of greater advantages. If these who talk so much about the inefficiency of colored public schools had been there they would have come away with their eyes open and their mouths shut."

The *Virginian* adds:

"We think we speak the sentiment of every white person present, (and there were a number) when we say that the closing exercises of the above school, Wednesday night last, reflect much credit upon the teachers in charge of the Public school, as well as the colored people of our town who patronize it. Every thing connected with the exercises passed off very pleasantly, and at the close, Rev. E. H. Barnett, Judge Geo. W. Ward, Messrs. John A. Buchanan, C. F. Trigg and S. N. Honaker, being called upon, made appropriate and encouraging remarks to the teachers, pupils and patrons. It is the duty of all to encourage this commendable effort on the part of these people in their efforts to elevate and educate their race."

SOME RAMBLING REMARKS ON THE COMING CONTEST. KEEP COOL!

During a recent railroad ride between New York and Baltimore, my neighbors in front discussed the political situation from Jersey City to Canton Landing, while my neighbors behind slept through the trip as placidly as the dust, flies, newspaper fiends, and other railway annoyances would permit. This marked contrast in behavior suggested the question as to which had more profitably passed their time. The political disputants were radically opposed when they started, and even more so, if that were possible, when the train stopped. My somnolent neighbors looked very weary when they got on the train, and even more sleepy when they got off. Lazily, as one does on a hot day, I turned the question over in my mind, and finally concluded the niddy-noddies had had the best of it; for while the occupations of both parties were fruitless, the disputants were much hotter, madder, and more fatigued at their journey's end than the devotees of gentle sleep.

Is it fair to generalize from this little incident, and say that the bulk of partizan talk is fruitless? Will a "rank Radical" give up his pet bobbies, if a "hide bound" Democrat ride a-tilt of him? Will any hard money believer be softened in his faith by any much money talk, or *vice versa*? I really believe that the number of partizan converts made by individuals "talking politics" is ridiculously small, and about as many are won over from one side as from the other.

The fixing of the Presidential election in November was a wise and considerate choice of seasons; for what would have occurred, if the final fury of the campaign had been made to happen when thermometers are highest and shirt collars most depressed? Or what degree of enthusiasm could be worked up, if the great torch-light procession of the Canvass had to be made in the snow, sleet or rain of a January evening? The wisdom of our forefathers deserves at least the compliment of imitation, and all of us can pay the compliment, by not airing our partizan views till the crisp days of October; say after the Ohio election. Such a course of action will not only be a delicate compliment to our ancestors, but we will begin to talk politics, well stored with facts, and with more breath to spare than those less conservative talkers whose tongues have been wagging all summer.

Presidential canvasses are wonderfully alike, and to expect any striking variety is to look for a new act in a Punch and Judy show. Each party will set itself up as a paragon of virtue, and solemnly assert its faith in the total depravity of the other. If the man in the moon, or some equally disinterested observer, should visit the United States this fall, his first impression would be, that all saints were enrolled in one political party, and all sinners in the other. But which party contained the saints, and which the sinners, would be difficult to determine, as every partizan would assure him that no pure political saint was ever known to have voted the "other ticket."

The political carpenters and joiners have nailed and dovetailed their platforms with the usual success of satisfying but few of their followers.

The height of skill in political architecture will be reached, when a reversible platform be perfected; one which read up and down means "Yes," and when read down and up means "No." On such a platform an immense concourse of voters could be assembled, provided the usual means of partizan persuasion were not forgotten.

Party lines are but faintly drawn at present, and probably the controlling vote lies in the hands of that "great middle class" not blindly attached to either party, and who will vote, partly on what they believe to be the winning side, and partly on the personal popularity of the candidate. Hunger gives a keen scent and great activity; so the party out of power, being naturally very hungry, owing to their having been so long deprived of the loaves and fishes, have a very fair offset to the "Government aid" of the party in power.

A Presidential campaign is an expensive luxury, for almost every citizen seems to feel in duty bound to attend the meetings of his political associates, so as to have his own faith strengthened, and be more fully convinced of the wickedness and folly of the other side.

Fortunately, this country is too big for any individual to put in his pocket, or to rule or ruin at his own sweet will. Whoever may be inaugurated next March, it is not likely there will be any convulsions of nature, and the wheels of government will continue to revolve, no matter if a Republican or Democratic engineer has been placed on duty.

Howsoever true this may be, it is a miserable fact, that the Presidential canvass always interferes more or less with the activity of the business of the country. Insensibly, almost everyone becomes more or less excited about the contest, and the feverishness of individuals induces a feverish feeling to be apparent in the nation. No political agitation can change the soil and climate of the United States, and it is hundreds to hundredths that no civil strife here will mark the rest of this century. If people would only look calmly at the matter, and believe that there may be honest differences of opinion, without either party being knaves or fools, the hubbub of Presidential years could be greatly softened. Still, it seems to be true, that men will quarrel more bitterly over political than any other subjects save religious ones. Bigotry is usually applied to this foolish upholding of certain theological tenets, but there are as many bigots politically as there are theologically. To say that it is not well to have decided political opinions, is to state an absurdity; but to say that one thing must be so, because Smith, Jones, or Robinson thinks so, is to state an absurdity equally prodigious,

It is amusing, though painful, to notice how much more desperately two men will contend over a subject concerning which both are comparatively ignorant, than will two men better informed. In fact it is pretty safe to say, that the less a man knows, and the less he has seen, the more bitter partizan he is: among the lower animals he finds a prototype in the devil-fish, who will hold to an imbedded anchor until the tide leaves him high and dry, with as much tenacity as to the food he love best. Take any of the political issues of the day—National or State Supremacy, Currency, Tariff, or Civil Service Reform—and, in nine cases out of ten, the most blatant partizan will be ignorant of any side but his own, and not know much about that.

Brass bands and torch-light processions, fiery orators, fire crackers and fluttering banners have an almost irresistable influence on the average American citizen. Yet how few pause to think that all these things must be paid for, and that taxation will be the fund on which the checks will be drawn. The expenditures of both parties in a Presidential campaign, if turned into the Treasury at Washington, would make a perceptible diminution of the Public Debt, but expended as they will be, a few will be benefited at the expense of the many. If we should add to the actual expenditures, the time lost by millions of citizens, the total would be appalling.

Pure patriotism, like deep water, runs smoothly—the more shallow a demegogue, the more noisy he generally is. The rant and bluster of a word wirepuller differs much from the argument of a statesman. That statesmen are born, not made, is an idea more or less distinctly defined in the minds of a large number of voters; and the natural outgrowth of this idea is, that each and every one of them thinks he is as well or better fitted to conduct the affairs of State, than the parties chosen to fill the position. It is fortunate perhaps that such people are permitted to relieve their feelings by talking politics: if they were not, a social explosion would be probable.

It is a noticeable fact that "talking politics" and drinking whisky are great aids to each other—talking politics in a barroom seems to excite a thirst for whisky, and drinking whisky kindles a desire to talk politics. The reciprocal action of the two adds to the profit of the barroom, and hence, especially in cities, we ever find "the tapsters and maltsters" taking a deep interest in what they are pleased to term politics.

To go to a circus and not hear the clown remark as he tumbles into the ring, "Here

we are again!" would be contrary to all precedent, and a decided shock to conservative circus goers. Clowns always have said, "Here we are again"; some people have always laughed; and it is fair to suppose clowns will continue to say, "Here we are again!" until canvas tents cease to be an attractive feature of the circus.

5,230,000,000 bushels of corn. The Governor of Washington Territory claims for its great superiority in wheat production, and prophesies a yield in the near future three times as large as the present supply of California. The Governor of Dakota estimates the area suitable for field culture and especially wheat

LIBERIAN COFFEE.—The prejudices and practices of coffee-planters are likely to be revolutionized the discovery of a new species of coffee on the West Coast of Africa—the *Coffea Liberica* or Liberian coffee—and its introduction into coffee-growing countries. The transplantation of this plant from its native

The Empress of Russia died at St. Petersburg on Thursday morning, June 21. She was the daughter of Louis II., Grand Duke of Hesse, and was born on the 25th of July, 1826. She was married April 16th, 1841, to Alexander II., Emperor of Russia, and being admitted to the Greek Church, received the name of Marie-Alexandrovna in baptism. Her husband succeeded to the throne at the death of his father, the Emperor Nicholas I., February 18, 1855.

we ers again!" would be contrary to all precedent, and a decided shock to conservative circus goers. Clowns always have said, "Here we are again"; some people have always laughed; and it is fair to suppose clowns will continue to say, "Here we are again," until canvas tents cease to be an attraction to small boys. Political clowns have a certain lot of "gags," which they offer in all their staleness every canvass, and fondly hope that the political small boy will cry, "Ha ha!" and be intensely amused and edified. Probably the stalest and most wearisome of these so-called arguments, is when some shallow-pated partizan attempts to be very logical, and to prove that one of the great parties is responsible for the rascalities of some particular knave or set of knaves in it. To boil down the remarks generally made, the statement takes this form:—

Carpet-baggers robbed the people:
The carpet-baggers were all Radicals;
Therefore all radicals rob the people.

Or, if the voice proceed from the other side of the political fence, it sounds thus:—

Tweed and his Ring robbed the people:
Tweed and his Ring were all Democrats;
Hence all democrats rob the people.

If this be logic, what is to happen to the people? Yet to listen to such rubbish, many people will go miles and miles, and flatter themselves they are only doing their duty as citizens.

To what end do all these reflections point? Is it not towards the necessity of a strong, hearty government encouragement to the education of the masses? No representative democratic government can rise above the average intelligence of the citizens composing it. The school-house must go before the intelligent ballot as surely as a parent must precede the child; we will find a man being his own mother just about as soon as a free government like ours, intelligently conducted by unintelligent citizens. Intelligence linked with Liberty is the only corner stone of an enduring Republic: with Ignorance and Slavery as corner stones, the experiment has been tried, and history records no more dismal failure.

As our population increases, so do our dangers. A handful of snow, pressed in a ball and dropped from the roof of a house, is comparatively harmless—an avalanche is fearful; yet the same laws govern both. The United States have outgrown the snow-ball size, and in their present mass, the workings of political forces are visible to the naked eye of the veriest tyro in political science, that a century ago could hardly be discovered by the microscope of the political specialist. Blood and Iron is the Bismarkian theory of government: our must be Bread and Brains. Free Labor and Free Schools, with what our government already has, will give it a cohesion possessed by none other on which shines the sun; but with labor hindered and schools stopped, the centrifugal forces will exceed the centripetal, and our present republic be sent shooting out through space, seeking the ghosts of the republics that have gone before.

Great questions of absorbing interest are before the country, and if we indulge in political disputations, let them be on what will benefit the State, and not have for their object the trying of who can throw the more dirty water, or stir the lower depths of partizan slime.

If we seek to make converts, or simply to confirm our own views, this same advice is salutary—KEEP COOL. T. T. N.

UNOLE SAM'S FARM.

The wonderful extent and resources of our American heritage are set forth with great elaborateness and interest by Mr. R. P. Porter in the June number of the *International Review*. Thirty years ago, the American wheat crop was 100,000,000 bushels, and was divided in halves by the 81st degree west from Greenwich, a line just east of the western boundary of Pennsylvania; last year's crop of 450,000,000 bushels was divided equally by the 90th meridian, just east of the western boundary of Illinois. The last ten cotton crops raised by slave labor, from 1852 to 1861 inclusive, amounted to 34,005,440 bales; the last ten crops raised by free labor, 1870 to 1879 inclusive, numbered 41,454,743 bales, an excess of 6,437,303 bales in favor of free labor. In the last fifteen years the production of wheat and barley has trebled, the corn and cotton crops have more then doubled, potatoes nearly doubled, hey increased more than one-third, and oats more than 140,000,000 bushels. Exports have increased in still vaster ratio: from 12,147,400 bushels of corn in 1808 to 85,401,098 bushels in 1878, and in the same period, from 43,050,004 pounds of bacon and ham to 502,814,351 pounds.

Great as these amounts are, the agriculturel resources of America have only begun to be developed. Mr. Porter says: "Careful estimates show that the United States is capable of maintaining an area of 200,000,000 acres of corn land, which, with the average yield of the past ten years, would give us over 5,250,000,000 bushels of corn. The Governor of Washington Territory claims for it great superiority in wheat production, and prophesies a yield in the near future three times as large as the present supply of California. The Governor of Dakota estimates the area suitable for field culture and especially wheat growing, at 40,000,000 acres. Turning from corn and wheat to the other great staple, we find that the whole cotton crop of the world could be raised on a section of Texas less than one-twelfth of its area, or be divided between any two of the other principal cotton states without exhausting one-half of their good lands." Our young man go West to "grow up with the country." If the American nation grow up with its country, it will be worthy to lead the world it feeds and clothes.

THE following extract from the official report of the French Exposition of 1878 may be of interest to our readers, as showing the attention attracted by the Hampton exhibit:—

(*Translation.*) "The Normal Schools, which are public institutions destined to furnish teachers for the Primary and Grammer Schools, are represented * * * and among them, in a large gold frame, figures the Hempton Institute of Virginia, devoted to the instruction of colored people. Hampton, where the instruction is given by teachers of both sexes, presents an extremely complete system. Students can here begin with a primary and end with a High School course, though the most important place is given to mechanical education. There is a school of agriculture, an industrial department, workshops for all the mechanical arts; they design, sew and print.

"But Hampton is not rich! The students benefit by the work of their own hands, but this is hardly sufficient, for every day brings new applicants, and in spite of the constant assistance of rich benefactors, there is a lack of accommodation, some of the students being obliged at times to camp out in summer, in tents, and in winter in barracks. Nothing can be more interesting to read then the volume published in 1875 by Mrs. Armstrong and Miss Ladlow, "Hampton and Its Students," at the end of which is a collection of Negro songs, many of them of reel velue, made by the head of the musical department, Mr. Fenner.

"Hampton is also a Normal School, and is thus furnishing the material for future Hemptons. Good luck to these humanitarian nandertakiogs, for surely there is great need of them! The exposition contains many specimens of Hampton work, some of which are well worthy of notice, especially those from the Printing-office, the Industrial Room and the writing classes."

IMPROVEMENT OF THE OOLORED PEOPLE IN WASHINGTON.

It is interesting to observe the steady improvement of the colored population of this city. Every time I come here the proportion of dirt end rags and wretchedness seems to have perceptibly diminished, and that of well dressed and comfortable-looking people to have increased. Something may be lost in picturesqaeness by this change; rags are often picturesque, and colored head-dresses always are; but more is gained. All agree that the change is going on. I heard the matter discussed last night between two ladies, both long resident in this city, and one belonging eminently to the "First Families of Virginia." Both agreed that the whole course of the colored people here had been most creditable, and that they were steadily advancing. My Virginie friend spoke especially of the propriety of demeanor of the younger women; of their good taste in dress, and of the absence of tawdriness and mere display. Certainly the congregation of the colored Presbyterian Church close by me would compare creditably, in dress and appearance, with any in the land. Its minister is T. S. Grimke, a native of South Carolina and a graduate of Princeton; and his wife, formerly Charlotte Forten, is a graduate of a Massachusetts Normel School, and has many friends among the most cultivated people of thet State.—*Ex.*

DIED.—April 27th, at Carlisle Training School, of consumption, Zonekeuh, a Kiowan Indian student, one of the St. Augustine band. Zonckeuh had been failing through the winter at Hampton. It was hoped thet a change would benefit him, and not being strong enough to go bome, he was teken to Carlisle. He had a lovely and Christien character end died very peacefully, saying, "Oh no, I am not afraid to die. I weot to go to God's house."

DIED.—May —, at his home in Hertford Co., N. C., Charles W. Aakew, a studeat last year of Hampton Institute, and member of the class of '82.

LIBERIAN COFFEE.—The prejudices and practices of coffee-planters are likely to be revolutionized the discovery of a new species of coffee on the West Coast of Africa—the *Coffea Liberica* or Liberian coffee—and its introduction into coffee-growing countries. The transplantation of this plant from its native soil to Ceylon, Brazil, and other countries has been attended with such extraordinary results that the tree is likely in time to supercede the *Coffea Arabica*, the species now usually cultivated. Of little importance in its native country, the Liberian coffee becomes astonishingly productive when placed in the best plantations alongside or very close to its better known rival; and it has this peculiority—that whereas the Arabian coffee flourishes at an altitude of from 2,000 feet to 6,000 feet above the sea level, the Liberian variety thrives at from sea level to an elevation of 1,000 feet. It is not certain, however, that it cannot be cultivated at a considerably greater altitude, in which case its value will be greatly enhanced. Gn an estate in Ceylon, where the African plant has been tested, the enormous crop of two tons of coffee to the acre has been yielded. The plant is being tested in several other countries besides Ceylon. In Brazil, Venezuela, South Australia, Gautemala, Queensland, Fiji, Jemaica, and other lands, the seeds have been planted or young trees introduced. It is curious that hitherto England has been the principal centre of its propagation. Large numbers of saplings and meny thousands of seeds have been distributed from London, where the tree has been cultivated under artificial heet. The seede travel well if packed in damp moss. One important feature presented by the Liberian coffee is its power of resisting the leaf disease which is se fatal to the planters' hope in Ceylon. So far, at least, the plants grown in that colony have shown an signe of contracting the disease. There is little donbt that the Liberian coffee is destined to take en important place in the list of important vegetable products, and that it will be the means of introducing a valuable industry into countries which would otherwise not have thought of catering into competition with the coffee districts of South America and the East.—*Colonies and India.*

DOWN A CHUTE.

A chute is leid from the river's brink up the steep mountain to the railroed, and while we are telling it the monster logs are rushing, thundering, flying, leaping down the declivity. They come with the speed of a thunderbolt, and somowhat of its roar. A track of fire and smoke follows them—fire struck by the friction with the chute logs. They descend the 1,700 feet of the chute in fourteen seconds. In doing so they drop 700 feet perpendicular. They strike the deep water of the pond with a report that can be heard a mile distant.

Logs fired from a cannon could hardly have greater velocity than they have at the foot of the chute. The average velocity is over 100 feet in a second throughout the entire distance, and at the instaot they leap from the mouth their speed must be fully 200 feet per second. A sugar-pine log sometimes weighs ten tons. What a missile! How the water is dashed into the air! Like a grand plume of diamonds and rainbows, the feathery spray is hurled into the air to the height of a hundred feet. It forms the grandest fountains ever beheld. How the waters of the pond foam and seethe and lash against the shore.

Ono log, having spent its force by its mad plunge into the deep waters, has floated so as to be at right angles with the path of the descending monster. The mouth of the chute is perhaps fifteen feet above the surface of the water. A huge log hurled from the mouth of the chute cleaves the air and alights on the floating log. You know how a bullet glances, but can you imagine a saw-log glance? The end strikes with a heavy shock, but glides quickly past for a short distance, then a crash like a reverberation of artillery, the fallen log springs a hundred and fifty feet vertically into the air, and with a curve like a rocket, falls into the pond seventy yards from the log it struck.—*Truckee (Nev.) Republican.*

NEWS OF THE MONTH.

FOREIGN.

An Alexandria despatch says: "The Egyptian obelisk has sailed for the United State."

England is actively exerting her influence at Pekin to avert war between China and Russia.

The cattle plague has reappeared in the island of Cyprus, and 2,000 animals have died out of a total of 100,000 in the island.

A despatch from Calcutta says: "Statistics of the foreign commerce of Calcutta show that for the last few years the proportion of the whole absorbed by England has been slowly decreasing, while that of America and China has been increasing."

Sir Alexander T. Galt, the Canadian Minister, at a banquet in London last week, gave an account of the prosperity of the Dominion, which, he said, had only one immediate want, that of men, and he had come to England to induce the overplus of its population to emigrate to a land where indepeadence and wealth awaited them.

The Empress of Russia died at St. Petersburg on Thursday morning, June 3d. She was the daughter of Louis II., Grand Duke of Hesse, and was born on the 27th of July, 1825. She was married April 16th, 1841, to Alexander II., Emperor of Russia, and being admitted to the Greek Church, received the name of Marie-Alexandrovna in baptism. Her husband succeeded to the throne at the death of his father, the Emperor Nicholas I., February 18, 1855.

DOMESTIC.

The first car-load of new wheat of this season was inspected last week, and sold for $1.05 per bushel. It was shipped from Vincennes, Ind.

The one hundred and fifth anniversary of the battle of Bunker Hill was celebrated in Boston on the 17th inst.

The net imports of tea for 1879 amounted to 58,-293,500 pounds, and the net imports of coffee during the same year to 362,755,600.

During the month of May nine hundred vessels from foreign ports arrived in New York, being the largest number that has ever entered that port in a single month.

In the first three months of 1879 this country imported 19,585,000 pounds of pig iron from England. In the corresponding three months of the present year 468,040,940 pounds were imported, an increase of 447,462,000 pounds.

A bill has been introduced in the Quebec Legislature for the construction of a tunnel under the St. Lawrence River, to be used by the provincial and American railroads as well as by vehicles and pedestrians. The capital of the proposed company is $3,000,000.

The Public Debt statement for the month of May shows a decrease of nearly sixteen millions of dollars; and although only fifteen years have elapsed since the war closed, we have paid off $890,000,000 of indebtedness. If our revenues continue, during the remainder of this year, to show a surplus proportionate to that of the past month, we shall have outstanding by the close of the year an aggregate debt only about two-thirds of the amount outstanding August, 1865; in other words, we will have discharged nearly one third of our indebtedness in fifteen and a-half years. Then, again, the interest we have to pay now is only about $80,000,000; when the war closed, the interest was $130,000,000, showing a decrease since that date of nearly one-half in the yearly charge. Furthermore, as the debt has thus been diminishing as population was increasing, the amount at present outstanding, less cash in the Treasury, is only about $47 for each inhabitant of the United States, against $75 in 1865, and the annual interest per capita is about $1.50 against $4.30 in 1865.

On Friday night, June 11th, while the the steamer *Narragansett* was proceeding on her course in a heavy fog from New York for Providence, she was run into and sank in Long Island Sound, by the *Stonington*, a sister ship of the same line. The collision occurred off Cornfield Light, opposite Clinton, Conn. The bow of the *Stonington* penetrated the boilers of the *Narragansett*, and the burning coals of the furnace were scattered over the oiled wood work of the steamer which was soon in flames, thus adding to the fear of death by drowning the horror of death from fire. This increased the panic, and a rush was made for the boats. The first to reach the water was overcrowded and it swamped, but the others were put afloat with their precious cargos. The steamer was settling, the heat from the fire was growing too severe to be borne, and men, women, and children plunged into the dark waters with chairs, mattresses, and what-ever they could lay their hands on. Appalling scenes occurred, the horror of which are too sickening for description. Fully twenty-five persons, mostly children, lost their lives by this terrible accident.

POLITICAL.

The Republicans in their Convention held at Chicago last month nominated Senator Garfield of Ohio for President, and Gen. Chester A. Arthur of New York for Vice-President.

At the Democratic Convention in Cincinnati Gen. Winfield Scott Hancock received the nomination for President, and Governor English of Indiana the nomination for Vice-President.

The Prohibition National Convention was held at Cleveland, O., June 17th. Hon. Neal Dow, of Maine, was nominated by acclamation for the Presidency, and A. M. Thompson, of Westerville, O., for the Vice-Presidency.

BUTTER AND MILK.

THE ALLEGIANCE WE OWE TO QUEEN COW.

The New York *Nation* says: Whatever we may think of our ancient ruler, King Cotton, there is no question as to the allegiance we owe to Queen Cow. Every one of our agricultural products, with the single exception of Indian corn, is surpassed in value by our dairy yield. The value of the cows, and of the land especially devoted to their support, is reckoned at $1,300,000,000. The annual production of cheese is estimated at 350,000,000 pounds, and that of butter at 1,500,000,000 pounds. Their combined value—estimated at $350,000,000—is only one-fifth less than that of the corn crop. The production has increased 33 per cent. within the past year, since the introduction of the American factory system in the manufacture of them, they have become important objects of export, the foreign sale amounting during the last season to $13,000,000 for butter and $14,000,000 for cheese. The exportations this year have paid more than $1,000,000 freight, or enough to support a weekly line of steamers to Europe. They have paid $5,000,000 freight to the railroads of the country, and milk pays nearly as much more.

Dairying is a quiet industry, which is so dispersed among the great majority of farms in all parts of the country that we fail to realize its aggregate importance. As a money-producing industry it is, under the combined influence of the factory system for cheese-making and of the introduction of improved methods of butter-making, rapidly extending in every direction. One of the very best butter-making regions of the country, both in quantity and in quality of product, is Northern Illinois and the adjoining parts of the States to the north and west of it. A few years ago it was believed that good butter could not be made in the Southern States. There are now important butter districts in all parts of the South, and there are indications that the Northern cities will soon be supplied with fresh grass-butter throughout the whole winter from Mississippi, Tennessee, and other regions, where, before the war, the profitable growth of grass was regarded as an impossibility. No single influence has had more to do with the increased attention given to butter-making in these new districts than the introduction and wide distribution of the cattle of the Island of Jersey. These were formerly the "Alderneys" of the lawns and paddocks of the rich: they are now the practical butter-producing animals of the best dairy farms throughout the country. The favor with which they are regarded from an industrial point of view is based upon the physiological fact that, having been bred for centuries by the small farmers of Jersey, with whom the sale of butter has always been an important object their butter-secretion has been, by artificial selection, more completely developed than has that of any other breed. Not only is the quantity of butter greater in proportion to the amount of food consumed, but the butter-globules of the milk are larger and richer, developing more readily in the churn and working into a firmer product. This excellence has been recognized for half a century among those who sought to produce butter of finer quality for "fancy" use. It is now fast becoming known to those with whom butter-making is a business industry, and the extension of the knowledge promises to make the production of butter for export a much greater source of national wealth than it has hitherto been.

JOHN F. QUARLES, a colored man, who has been the United States Consul at Malaga, Spain, was admitted to practice as an attorney and counsellor in the Courts of New York State, on the motion of Algernon S. Sullivan, before the Supreme Court, General Term, yesterday. Mr. Sullivan said that so far as he knew this was the first colored man who had ever been admitted to the bar or practised law in that city. Mr. Quarles received his early legal education in Georgia, where he was born a slave. He was graduated from the law department of the Howard University at Washington in 1872, and began the practice of law in that city. In 1875, President Grant appointed him to the position of Consul at Malaga. He speaks German, French and Spanish fluently.

OLD POINT COMFORT, VA.

Situated within one hundred yards of Fort Monroe;

At the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier going and returning, with the U. S. mails, landing only 20 rods from the Hotel, which is substantially built and

COMFORTABLY FURNISHED;

Has hydraulic passenger elevator, gas and electric bells in all rooms; water-rooms for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or public building in the country. And as a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this House, with accommodations for about

SEVEN HUNDRED GUESTS

Presents inducements which certainly are not equaled elsewhere as a summer resort, or cold weather sanitarium. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleeplessness and nervousness the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics at the Hygeia.

For further information, address by mail or telegraph.

Hampton Normal and Agricultural Institute

AT

HAMPTON, VIRGINIA.

INCORPORATED IN 1870.

S. C. ARMSTRONG, *Principal;* J. F. B. MARSHALL, *Treasurer.*

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

ANNUAL session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division.

Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 10 years of age. The first year is probationary. None under fourteen, or over twenty-eight years of age need apply.

The Institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of..... dollars, payable &c., &c.

For further information address,

S. C. ARMSTRONG, *Principal,*
Hampton, Virginia.

VICK'S

Illustrated Floral Guide,

A beautiful work of 100 Pages, One Colored Flower Plate, and 500 Illustrations, with Descriptions of the best Flowers and Vegetables, with price of seeds, and how to grow them. All for a FIVE CENT STAMP. In English or German.

VICK'S SEEDS are the best in the world. FIVE CENTS for postage will buy the FLORAL GUIDE, telling how to get them.

The Flower and Vegetable Garden, 175 Pages, Six Colored Plates, and many hundred Engravings. For 50 cents in paper covers; $1.00 in elegant cloth. In German or English.

Vick's Illustrated Monthly Magazine—32 Pages, a Colored Plate in every number and many fine Engravings. Price $1.25 a year; Five Copies for $5.00. Specimen Numbers sent for 10 cents; 3 trial copies for 25 cents. Address. JAMES VICK, Rochester, N. Y.

Yard Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed 10 cases containing two dozen cans, each one filled with two pounds of crab meat. On every can will be found full directions how to prepare Crab Salad and Devilled Crabs,—two dishes considered by those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surprising delight of the palate. The meat of the crab is, beyond peradventure, the most delicate and delicious of all seafood, far exceeding in fineness of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meat in these cans, than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy or dietetics. For pic-nics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $6.00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the malls at senders risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $3.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed at the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work from all parts of the country, is solicited and will be done cheaply and well Estimates will besent on application.

EDITORIAL CORRESPONDENCE.

SAN FRANCISCO, CAL., *June* 6, 1880.

Flying along the shore of the great bay of San Francisco makes one realize that one has crossed the continent. It is a vast harbor, bounded by plains and hills, and, on one side, by lofty mountains.

The city is built upon forty-two hills. In its heart, amidst fine residences, will rise a small mountain of sand overlooking the houses, but awaiting its turn for removal, for steadily the smaller hills are leveled to an inexorable grade. But the city accommodates itself to the greater slopes, and acres of dwellings are spread like a mantle over these monstrous waves of sand. The sensation of the city, to me, is the cable street-cars, which glide up or down the streets at an angle often of nearly forty-five degrees, propelled by a wire rope moved by steam power, running underground, to which the Conductor attaches the car at will, through a slot an inch wide just over the cable between the rails on which the cars run. It reminds one of riding in an elevator. This doing away with tired, aching horses and going up and down steep hills at a smooth, rapid pace, is delightful. A little loam upon this naked sand will, with water, in six short months produce a beautiful and luxuriant rose garden.

One city is a good deal like another in general appearance. San Francisco has the usual blocks of first-class stores, gorgeous show-windows and fine streets. There are bustling wharves, energetic steamtags, and forests of masts. Californians point with pride to the Palace Hotel, which is immense and magnificent, having cost about five millions of dollars. There is nothing like it in the East. It is built as a quadrangle, covering a whole block, and the court in the centre is entirely glassed over.

One is struck with the numerous windmills in the city limits for purposes of water supply. The houses are nearly all of wood and seldom have over two stories, because of the danger from earthquakes. The mingling of the vegetation of temperate and tropical climates is striking; the palm and the century plant surprise you as you go about in an overcoat. The weather is hot and cold at the same time. Thick clothing is worn the year around, and yet there are very hot days or hot parts of a day. It is rather too stimulating here, and one is always on guard against keen and cutting winds.

I was driven out on Cliff House road, through miles of hilly country, breathing every moment a rich perfume from the endless fields of yellow and purple Lupin, a wild flower that decks the sand hills as if for a festival and delights the eye. From the summit of a hill I saw the Pacific Ocean for the first time in twenty years. Waves that had crossed its entire breadth broke in steady, grand succession on the broad beach below. A few hundred feet from the shore were the seal-islands, where perhaps fifty seals were basking in the sun or playing with each other, making uncarthly sounds. One, especially, who was perched up higher than the rest, seemed to be addressing his fellow seals. His bellowing reached the shore and sounded like distant orstory. The Golden Gate park stretches from the city to the ocean, commands a fine view of distant mountains, covers a succession of sand hills whose wild picturesqueness is being "improved"; and is most fortunate in its magnificent sand beach and ten mile drive beside the great waves that come rolling in from the coast. Once a month a large steamer leaves for the Hawaiian Islands and Australia, carrying the English mails, a twenty-four days' voyage.

THE VOYAGE.

Last Monday, June 7th, our steamer pushed slowly away from the dock amidst waving of hats and handkerchiefs and parting salutations, and soon passed through the Golden Gate, the entrance to the harbor of San Francisco, and stood out for mid ocean. The harbor we have left is on a grand scale, and suitable for the trade which converges to this point from Oceanica and the coast of Asia. The "Golden Gate" seems arranged for effect. Through it commerce pours over the Pacific Ocean its varied commodities to bring back more than it sent, even if men and morals are ruined by the rum, powder and sensuality that abound on the outposts of civilization. Remote trading stations are for trade alone; the moral ruin they have worked is a sad chapter in history. Yet there are good men in this work and there is some improvement along these frontier lines.

Once fairly at sea, the Farallon Islands passed, there settles down upon us all the monotony of a sea voyage. After a day's sickness, ladies and all begin to appear, for the sea is smooth, and a fair wind fills the sails and steadies the ship, which is a propeller—narrow and very long.

June 14th. Maui, Oahu and Molokai is the distance; on shore in four hours. It is an interesting moment when one first sees one's native land after an absence of twenty years spent in the stirring events of the past two decades in the United States—when that land is a little cluster of islands in the midst of the Pacific Ocean.

The islands are volcanic, and lifting their rocky crests right out of a tropic sea are some of them so high as to be crowned with eternal snow. We have been seven days sailing towards them. Our fine steamship, the *Zealandia*, Capt. Henry Chevalier, of the line running monthly from San Francisco to Australia, via the Hawaiian Islands, a distance of 7,200 miles, has had a delightful run over a smooth sea. There are thirty-eight passengers for Honolulu, several of them returning after an absence of from ten to twenty years to revisit their old home. Many of us were children together years ago. One is returning from successful treaty negotiations on behalf of the Hawaiian government with England and Germany. Some left the islands so young as not even to recognize the points so pleasantly familiar most of us.

The largest extinct crater in the world, that of Mt. Haleakala, over 10,000 feet in height and seven miles in diameter, lies on our left, half shrouded in mist. On its grand slopes were passed the happiest days of my early life; soon, I hope, to be renewed with an old time playmate by whose energy water has been brought across gulches and ravines from the other side of the mountain, fertilizing thousands of acres and creating what are likely to be among the most profitable sugar plantations in the world. Galloping around from plantation to plantation, seeing the boys chewing sugar-cane every hour in the day; climbing to the top of the mountain and viewing thence as grand a scene of volcano, ocean, land and cloud as the earth affords, will be a welcome change and rest after three and a half years of war and fourteen years of reconstruction work at Hampton.

Time has passed pleasantly on shipboard, with reading, sleeping and eating, which are the principal occupations. We unearthed from the steerage a remarkable musical machine which produces the effect of a parlor organ, by forcing air through perforations in paper, somewhat on the principle of the phonograph. The paper is ten inches in width and from ten to a hundred feet in length—four feet to a tune: music by the foot! We couldn't quite comprehend it, but it served our purposes well for the "Virginia reel" and "Old Dan Tucker" which enlivened the latter part of each day. The piano in the saloon is asthmatic, but has afforded much pleasure. Vocal talent among first-class passengers is limited. Our Sunday choruses were rather faint as to general support. "Jesus, lover of my soul," by the prima donna last evening, was heavenly. Preaching has been by a leading California clergyman, an Irishman, with whom I have had several hotly contested games of "shuffle board." The services in the steerage were interesting. There we found an old choir leader, and several fine tenor and bass voices which made the quarters ring. In this cramped end crowded place the worship seemed more real and earnest than in the elegant and roomy saloon. Second-class passengers are welcome and invited to come to the latter, but are sensitive and don't like to go where they don't belong; so we went to them.

The sin of betting on the day's run was practised to some extent; also as to the hour of arrival. We made about 300 miles a day.

ARRIVAL.

There! the sunlight strikes the crest of Cocoa Head, the safest point of the island of Oahu, where my home is. We are leaving Molokai, where the leper settlement is, and some grand scenery that I mean soon to get at, and are nearing Oahu. On the side nearest to us is an old nasche, *Waimanalo;* a lovely sloping plain, with the sea in front and mountains behind, fenced as to its flanks by ranges of hills; a perfect little kingdom by itself. It is now a sugar plantation, managed by an old schoolmate whom I remember principally as declaiming at school some piratical verses, "I'm afloat, I'm afloat, on the fierce rolling tide." He is now much more patriarchal than piratical.

I can hardly credit my senses as each familiar peak and crest and slope appears, recalling some youthful expedition on horseback or ramble on foot. The intervening period of twenty years has pushed them so far back as to make them seem like dreams. The nearer we come, the more plainly we see the rough rock-ribbed, brown sides of these suddenly tossed up mountains. They don't look tropical; that effect is along the shore on the alluvial wash from the heights behind; *there* is luxuriance and beauty: the contrast is fine. These islands are a capital place for a child to grow up in—not so much to live in. While the death-rate among the natives the past fifty years has been fearful, that among the whites has been as remarkable the other way. Judge Caton, late of the Supreme Court of Illinois, in "Caton's Miscellanies," states details showing an astonishing survival of children of foreign parents. Not a death in twenty-five years at "Punahou," the principal boarding-school. The climate is warm and enervating; but one can be always out of doors, and there are such mountains to climb, such ravines and gorges to explore, such hunting and horseback expeditions, cattle driving, and throwing the lasso over the wild steers that try to bolt from the herd! Then the educating power of Nature; for here are Mountains lofty as Mt. Blanc, 15,000 feet high, the largest active volcano in the world, three miles in diameter, and an occasional eruption and earthquake. I saw, in 1858, a jet of red-hot lava issuing from the sides of Mauna Loa 300 feet in height and 100 in diameter, and a stream of molten rock flowing fifteen miles to the sea, sometimes at sixty miles an hour, making, in the black night that followed, an illumination beyond imagination; an awful darkness and a lurid, hellish light, creating forever a mental picture that makes all the art galleries in the world seem trifling. This, and the view from the mountain-top of the ocean full of islands in every direction, and the battle of Gettysburg, are the chief pictures in my mental gallery, and have been most educating and inspiring—a help to faith, a proof and a sign of God. Ordinary travel don't seem to help people much. I seldom, if ever, see one who has made the usual trip abroad who seemed stronger for it, except in bodily vigor. Spend six months among these mountains; wait till you get their inspiration; it will come slowly. Never mind the things that men do—their best work is merely interesting. It is all details, and superficial study of it don't pay. Not many things, but much, "*Non multa, sed multum*," as our Latin Prose used to say, is the thing. We who were born and brought up here have had a capital chance—yet our fathers exiled themselves from the world to bring the gospel to the heathen. They gave up everything, but got back much: never were there happier or better satisfied men than they in their hardest days. There is reward for every act of sacrifice; the greatest gain is in the greatest loss. Call a "Fool's Errand" not that of the man who burns his ships and attempts what shall seem impossible, but the life of the man who risks nothing, buys safety and comfort, persuades himself that the old hulks or forts must be defended at all hazards, and tries to make men out of his sons by giving them an expensive education. What he is, and not what he owns, is more likely to affect their character and future.

Every minute we are passing extinct craters; new valleys are opening up; distant blue mountains are standing out with jagged peaks, some cloud-covered. Now we are abreast of the telephone station, whence we are announced to the capital, Honolulu, five miles distant. Our friends are this moment passing the news around: there is bustle and eagerness there, for the outside world is heard from but once a month. Far beyond are the Waialua Mountains where we used to hunt wild turkeys. Close off the starboard bow are nearly around it; we see a foreground of cocoanut trees, and rich foliage concealing most of the houses, and a background of mountains and lovely valleys lying side by side, for we are now on the leeward side of the island. Long and graceful slopes, and not rugged, barren steeps, now greet us. I see the ships in the harbor ahead. All this is interesting and beautiful beyond description, and is hard to realize. The ocean is of a deep blue; the land is gray and barren, except where the decay of volcanic rock has made rich soil for grass and fern and tropic verdure; an exquisitely delicate green lies in the heart of the valleys.

We are around Diamond Head: there is old Punch Bowl, an extinct crater just back of my mother's house. On it is a royal battery of heavy guns, harmless as Mary's lamb, from being so high up, but very effective for purposes of salute. I once thought it impregnable unless attacked from the rear. There's a flying fish—they are the first of living things to welcome us. A little while ago one missed his aim and flew on board. I see Mt. Tantalus, where we boys used to camp out nights. There is Rocky Hill (an unsentimental boy has just left all this to go and look at the monkey), back of the old school-house, which we used to explore in the hope of finding wooden gods secreted by the natives seventy years ago in the great uprising against idolatry. The iconoclasm was so complete that a genuine god was a great find. I see Round Top and Manoa Valley, into whose rich and luxurious recesses I used to go to write compositions and orations. Palolo, where we had such jolly picnics; the cocoanut grove and the plain, now Kapiolani park, where we had such glorious moonlight rides years ago, and the magnificent game of Memeluke Weddiag, with twenty couples mounted on well trained horses. A line of girls in advance, of boys thirty yards to the rear, one more boy than girl, then a waved handkerchief, and both lines dashed forward; one boy must miss getting a girl—no one meant to be that one: it was the maddest, wildest time ever dreamed of, till it was settled who was "out." The horses liked it, for they knew the ground. There's the spire of the "Stone Church" where my father preached for twenty years; built in old times of great blocks of coral dug under water, and carried partly on the backs of devoted converts, a mile from shore. They don't do such things now, in this or any advanced Christian country. The Pilot is just aboard—a rush to the gangway for news. A letter of welcome! All's well at home.

AT HOME.

As we neared, we saw the esplanade crowded with people, but it took time to get the great steamer turned around and alongside; so our friends of the steamer exchanged shouts in boats. Several, one the hero of many battles in the late war, covered themselves with glory by climbing up, hand over hand, on a rope that hung by the ship's side. In the midst of cordial greetings which only long absence earns, I was amused to see the Hawaiians at their old tricks, swimming around the ship with an easy, fishy grace, perfectly at home, never failing to get the quarter that curious passengers would throw into the water near them; a duck, Kanaka out of sight, then in a moment he would reappear with the shining coin, which seldom reaches the bottom before it is seized. Ashore at last! No custom-house botheration; lots of pleasant recognitions, many from the natives. How melodious their language—jargon to a stranger, but to me it is delicious to hear it talked again and to use the little I remember. Their faces are kind, open, forever cheery and ready for a smile, and they talk in a smooth, liquid way suited to them, without much thinking. There is no rag or vigor in any of their words as in ours; theirs ripple along, and stop and play and don't attend strictly to business, and they have a supply of convenient ones which mean anything and define themselves. Anything but exactness for a Hawaiian. Surely this is the place for a tired brain to rest.

To have a mother again, after being twenty years without one, is a little strange at first. It was almost too much for her. Time makes its impress on things as well as people. The ben-coop I built twenty-four years ago, now standing in the backyard, could not be reproduced by mere skill. It knows something about hens that a new coop would have to find out. The Chinaman who has stood by for twenty-five years came up cordially, but I was advised not to give him the intended present, because, though a good servant, he cares for nothing but money, with all he can get of which he is constantly gambling, with a view to laying up for himself treasures in China. His manner was childlike and bland. It was soon time for lunch. Think of unlimited fresh bananas!—a hunch is always banging by—and of delicious mangoes which cannot be consumed fast enough, and a watermelon apiece.

June 15th.—Yesterday I had the best dinner in twenty years. First, *poi*, made from *kalo*, the Hawaiian staple; a thick paste; when two days old it is food fit for the gods: it should be eaten with the fingers, which, when skilled, carry it to the mouth with a graceful, indescribable, spiral-like motion.

You should see the natives ent it in their tidy, deinty wny. Then, broiled *ama-ama*, n sen fish of exquisite flevor,—compared with which our Virginia sheepshead, hog-fish, or Spanour Virginia sheepshead, hog-fish, or Spanmackerel are nowhere,—takeo with the coarse fresh selt from the ponds, as superior to the etore article as sugar is to sawdust. Then *such* a melon! There were other good but not unusal thtogs on the tshle. *Poi* is an inspiration; an eternal fitness by way of food: it is meóe from *kalo*, the *arum esculentum*. Physicians prescribe it as food for delicnte stomachs. Nothing equals it for building up the digestive organs when ruined by hard drinkiog or wrong living. It is the most simple, comfortable food in the world; yet it makes the muscle which produees the greet sugar crops of these islands. *Poi* nnd *lomilomi* (Hawaiian movement eurc) are among the sovereign remedies. Miserable dyspepthe sovereign remedies. Miserable dyspepsia, that I come out here and be cured by the food of the Hawaiians, nud by the delicious pressure of their soft hands on every musela in your body.

We rode to the cemetery, where the missionary fathers and mothers are gradually gatheriog for their long rest and reward. They have earned it: the wonder is that after the horrors of six months' voyaging around Cape Horn in whale ships, living iu savage huts, on dirt floors for years, and working over fifty years with little chauge or rest, they should last as they have done. In ripe old age they are droppiag off, and the little cemetery where they lie, under the shadow of the great stone (coral) church, is the sweetest, most beautiful I ever saw. It is not cared for by contract, but by loviog hands; it is full of flowers of many kiuds, royal aud wine palms and cypress trees, perpetually bloomiag and green.

As we stood there, one of the mothers in Israel came to tend the hose that insures a daily shower on the ever decorated graves. Apart from personal associations, this is a most interesting spot. Here lie the pioneers of Christian civilization in the Pacific Ocean. They tried to make a New England in the tropics, Puritans out of Hawaiians. They did not do that, but laid the foundation of a civilizatiou that is working itself out according to its peculiar conditions. They created a moral force, which, terribly opposed, not so much by heathen as by men from Christian countries, has asserted and sustained the worship of God and the ascendancy of order, justice, humanity, but has not yet won the battle. It never was won anywhere. Here, with no inherited or accumulated force from past generations, the right side is at a special disadvantage. It is worst, because most insidious, danger is ahead. In opposition and in poverty it was strong. This period has passed. The country is fast getting rich, through a treaty with the United States which admits Sandwish Island sugars to Americnn ports free of duty. The demand for labor has brought 10,000 Chinamen to these islands. This surplus of men (for Chinese women don't come) is a sad thing for morals. Rapid money making in any country makes both good and bad possibilities. The panic in the United States and the hard times in Great Britain were a great moral tonic. Hawaiiau prosperity is a grand opportunity; will it be improved? The missionary fathers, who will all erc long pass away, have left a numerous and fast increasing progeny who have a grasp on wealth and power in these islands, and form a conservative chass of no little value to the nation. To deny that the missionery work has been the eelvntion of these islands, is absurd. It is a grand success, though not a perfect work. Its imperfection is the basis of the smell talk in a certain class in society here. Visitors are stuffed with it; "Missionary" is served at table three timcs n dey. The Missionary Cemetery will contain the men who have, under God, seved an importnnt part of Polynesia to civilization.

We drove about the towo, seeing cozy, charmiog cottages on every side embowered in tropical trees, vines of every variety, and surrounded with luxurient shrubbery, always green and filling the nir with fragraoce. Water, brought in pipes from the mountains, is carried to every garden. The houses are roomy, niry and simple, usually of one story, though now some elegant mansions are going up. There is no poverty or foolish extravagance, but the golden mean. On every side there are Royal palms, cocoeuuts, bananas, breadfruit, tamarinds, India-rubber trees, the *samang* (monkey pod), *Poinciana Regia*, (ancred trees of the Hindoos—an elegont tree with brilliant red flowers that I don't blame them for worshippiog), *algeroaba*, *kukuis*, oleanders, *hau*, bamboos, *papias*, guuvas, *ceiba* (silk cotton tree), and mangoes, and many others. The streets nre often arched over with sorending branches. In my sister's garden there nre over two hundred varieties of trees and plants.

I borrow an account of this place from n thirteen-year-old nephew's composition:

"OUR GARDEN."

"Many peopln have beard of D. Hillebrand's garden in Nuuanu Valley, but not many know all the choice plants there nre in it. I think the palms are the fiaest of oll aod I will tell some of the varieties. The cocoaut, wine, sugar, date, arica, betel, red and goldeo mauritius, ivory nut, royal, traveller's, palmetto, and different kinds nf fan palms.

"The ivory palm bears a nut whichis voluable in commerce.

"I think that the royal palm is the handsomest of all palms. The betel-nut ie called by soma the hamhoo palm because tha trunk is so like a bamboo. The Chinese consider the nut very choice.

"Ooca there was a Upas tree io this garden, but a storm blew it down and we were glad.

"There are five kinds of orange trees. The ilang-ilang is a shrub and bears n greenish flowet which has n delicious perfume: it was discovered in Java. One of the best fruits in the garden is the zapotn or sapodilla, which fruit is browo, and very sweet aod rich. Of other fruit trees there are Spanish plum, rose apples, guavas, alligator pears, and many besides whose names I do not koow.

"Of choice flowerieg trees, there nre the crape myrtle, tiger claw, white acacia and the tulip tree. If I were to tell all the plants it would take too long."

In the veniog the King's band, twenty-six instruments, composed of youog natives under a German teacher, played at tha Hawaiian Hotel. The band is very fine, and would do credit to any city on our continent. It gives an open-air coocert every week and plays on many occasions, one of which is the nights of full moon. It was pleasant to meet the boys; they are a handsome, interesting set of fellows: after playing, they gave us some songs. Hawaiian voices are full of melody. I listened to tenor tones of exquisite melody and delicacy: they have a taste for harmony, but are not disposed to develop their powers. The Hawaiian Hotel is quite grand, and well kept, a government affair. It cost $120,000, and created a national debt.

I have been to Punahou (Oahu College), where I attended school for more than ten years, up to 1860. It is, really, a high school, with a boarding-department, and the principal school of the country. It is well conducted, just the place for delicate American boys who need fresh, sweet, soft air the year around. It is interesting to stand where twenty-five or thirty years before you dechimed, "The boy stood on the burning deck," or "Marco Bozzaris," or "Old Linden when the sun was low"; to see other urchins sitting in the same row; to see other urchins sitting in the same low"; to see other urchins sitting in the same places, thinking just as their parents used to; to realize that you are among the old folks, and are expected to say something to edify the youngsters who are aching to get out of doors. Punahou means new spring, and has done a good part in the mental and moral work of this group.

It was (is not now) a unusual labor school. We boys used to work about two hours daily, ending when we could count seven stars. I had a small garden patch of my own, but never was very successful, being in a hurry to get through a disliking hoeing. But it was good discipline for which we were not then thankful.

I have just received a call from "Timoteo," an intelligent young Hawaiian, one of seven just graduated from the Theological Seminary under the care of the Rev. C. M. Hyde, formerly of Haverhill, Mass. "Mokuhiki," aoother graduate, works here afternoons and is now gathering the tamarind crop. I have forgotten most of the language, but words are constantly coming back. Smiles and motions and exceediog good nature helping not a little. Intelligent Hawniians are most pleasing people. I like to watch their facial expression; I nm fascionted and touched by their kindly looks on every side; they are always sunny and smiling; the play of their features has an irresistible charm; yet they are not handsome, though finely formed. They say, "How loog have you been gone?" "You are one of us." It ie comical to see nativn peddlers carrying vegetables, ouspended in calebashes from either end of a five-foot, slightly flexible, pole resting on their shoulders; their dog-trot gait, call from the foot of the stairs, or cough or sneeze or whatever will attract attention, is so like old times. But tha Chinese are getting into this as into all branches of trade; they nre even raising *kalo*, the great etople, and selliog it to the natives, yet raising it is, *par excellence*, the Hawaiian's occupation. The Chinese peddler is undemonstrative, but he succeeds.

June 10th.—Hmpton School closes to-day. I wish I could be there to help get things on a vacation basis: it is a great care to arrange for each student what he or she shall do, and especially for those whosa homes are at a great distance; this was done, as far as possible, before I left. I hope the teachers will rest well this summer. Called on the King yesterday with Col. Charlin Judd, his Chnmberlain. We were all schoolboys togather, years ago. His Mnjesty combines cordinlity with digoity; he can be plnyful nnd merry, but is always the King. Wn are joocosly speaking, to dina off choice "dog" one of these dnys; next Saturday to attend a raviaw of the Hawaiian Army.

An important topie came up in our conversation. The old chiefs deemed that liquor should not be sold to natives,—rum has always been free to foreigoers. They knew that it would destroy the people, aod, till now, with their own King and nobles aad representatives, the people have enforced this distinction egaiost themselves. But, of late, Chinese have come io by thousnnds, and South Sea Islanders have been imported by hundreds as laboers. Yesterday a motion in the Legislature to extend the prohibition to them was lost by a vote of forty to thirteen. So n common South Sea Islander cau welk up and take n drink, in his rage and dirt, and an educated, intelligent, well dressed half-white can't do it. This "rules him, and there is a strong movement to break down the restrictive law, partly because it offends Hawnilan pride, especially on the part of the smart, dressy, free and easy half-white class. The King and Judd both felt that there was danger to the race; the natives cannot restrain themselves. Their good seose will refuse free rum as a direct issue, on its own merits; but in the case as now put a fancied self-respect is involved. It is proposed to sell Hawaiinos only a diluted article, with, say, nioeteen or twenty per cent. of spirits; n bright idea but impracticable, like taxing bad dogs and oot good oocs, as was proposed some years ago by the Hon. Mr. Ukeke. Quantities of rum and gin are being imported and sold indirectly to the natives by mercantile houses in town, who pack the bottles in dry goods for traders in other islands. The craviog void of the Kanaka manages to be filled somehow, but removal of the restriction would cause a fatal flow of poison over all the Islands.

LEGISLATURE.

The "Ahadeke" or Legislature was in session in the really fine and stately government building. Business is conducted in English and Hawaiian, a skilled interpreter taking the spirit of each speaker and rendering his words in either language with clearness and vigor. There were many intelligent faces and some pleasant recognitions. There was the inevitable, irrepressible member. Of the twenty-one Nobles, eleven are white; of the twenty-four Representatives, six only are whites. There is but one body, nobles, ministers and representatives all sitting together. A white man was attempting to explain to some obtuse members the necessity of an appropriation for a national survey and of the expense of triangulation; it being difficult for the untutored mind to see why surveyors should spend weeks ou the top of adjacent mountains sighalling each other. The Hawaiians do not lack brains or wit or eloquence. Morally, they are weak; industrially, they are slow; happy when they are not hungry. Conversation with Judges Harris and McCully of the Supreme Court, who have delightful rooms in the government House, turned, as it often does in serious talk here, towards the Negro exodus in the United States as a chance for securing labor for the plantations here. Kansas can take no more; fifty thousand emigrants are expected from the Southern States within a year. Here labor is greatly needed and well paid; treatment is good and many things are favorable, but there are difficulties. I think there will be a trial of it. But more on this by and by.

I have wandered along the wharves that, when I was a boy, were lined with whale ships and covered with oil casks, which are a thing of the past from the scarcity and wildness of whales and because of kerosene; but the immense development of the sugar business makes lively scenes these days, what with coastwise schooners and steamers and the California sugar and the Oregon lumber trade. After lunch, mother and myself drove, with the ever faithful "Bessie," a family horse thirty years old, to see the Reform School where about eixty nativa boys are in training, but especially to get a superior article of *poi* which these boys make. There were twenty of them pounding nway, turning the root of the *arum esculentum*, which edorns many an American garden, from its solid boiled or steamed state, into a thick paste, applying water every few minutes to create the right consistency. It is the ambition of his boys, Mr. Hill, the manager, said to meke good *poi*; they cam for little else. They are bright, but have no ambition. How cen one be ambitious in this climate, unless of foreign stock? With our *poi* on board we started for sugercane, of which I aeed an unlimited supply, my youthful passion for chewing it being not the least nbated, and obtained of a Portuguese "Ancona" a lot of juicy red and white stalks at five cents a piece, tha chenpest bliss I ever bought. Wn returned by wny of the Insane Asylum, ridiog through n helt of the dreariest volcanic rocks, interspersed with great cactus plnnts or trees, called here the prickly pear. The insane are well cared for in a quiet and beautiful spot.

June 17th.—We live in a simpln, plnin way, nnd yet I had with breakfast, strawberries, mangoes, bananas nnd fresh cocoanut. Tha milk of the young cocoanut is nn offset to many of the ills of life. It is nature's own nectar—tha tender meat is her ambrosia—which is brewed or prepared high up in the air in the grseeful crest of the cocoa-palm, accessible oely to the spry youog native, who, for a dime, will ruo like a monkey to the top, twist off the cumbrous fruit, lettiog go with n twist that gives it a motion like a shot from a rifled cannon—it strikes the ground just right, or it would hurst, and the possessor is happy, if somebody will tear off the thick husk of the nut. But tbis letter is already too long.

S. C. A.

JAMAICA.

The Island of Jamaica presents one of the many phases of the Negro question which have appeared during the last fifty years. There the Negro is in the tropics, subjected to those modifying debilitatiog influeoces which seem to impair energy, aod make the future of human life a curious question. There, as everywhere else where the Negro has come in contact with the white, he has been put at a disodvantage. Trade and not philanthropy put him there. He was not imported to be elevated, but to be worked, and the nearer he beenme a patient, uothinking, laborious beast of burden, the more vnluable he became to the white race. Finally, the conscience of the British nation set him free, in Jamaica, but made freedom the only gift, leaving him in his igoorance and barbarism to flounder about, and match himself against the dominant race, as best he could. Nothiag was done to ameliorate his condition.

The freedom of the slave was a fatal blow to the vast sugar interest of the island. The sugar planters made fools of themselves. They were angry because they had lost their slaves. They believed that sugar could not be produced, profitably, with free labor, and instead of "reconstructing" their social condition, they began to abuse everybody, and, especially, did many absurd things, which drove the Negroes from the plantations, made them vagabunds, and put them into a way of hose, reckless living which has been a drawback to them since that time.

One important fact should always be reoembered. The majority of the owners of the sugar estates did not live on the island, but spent their time in idleness and luxury in London. They took no interest in the Negro, for they seldom or never saw him. They looked to the overseer for money, and he ground it out of the blacks. After the ect of emancipation, these owners found their estates decreasing in value, and from that time to the present, they and their descendants, and their friends, have, at all times, positively declared that the Negro has steadily retrograded. It has been, and is now, quite difficult to obtain reliable information regardiog these Negroes, owing to the existence of these violent prejudices. The Negro has said nothing, and cared to say nothing for himself. In the interest of social science, very few have taken the trouble to iuvestigate the matter.

It is, therefore, a matter of no little moment, that those who take an interest in the subject call leave before them the paper read before the Royal Colonial Institute of Great Britaio, by Sir Aothooy Musgrave, the present Governor of the Island. He is in a position to nscertain the truth, and his testimony is of great value, because he is an able and impartial judge. In his opinion, the Negroes are now advancing in civilization. A few facts are interesting. The population numbers about 570,000, and increases at the rate of about 0,000 per ycar. In 1868, the exports were valued at $5,500,000. In 1878, they reached $5,800,000. In 1808, there was deposited in the Savings Banks $200,000. In 1879, there was deposited $1,035,000. In 1867, the valuoof books imported was $3,120; in 1878, it was $48,000. Good, substantial buildiage are being erected in many places, aod tbe people are making homes for themselves. In 1868, there was eu average school attendance of 12,210 pupils. In 1878, the everage increased to 29,879, distributed in 017 different schools. Railways and telegraphs are being built. These facts indicate that the Negro may meke progress in civilization, and should close the lips of those who believe only in his failure to advence.

England holds this colony in her grip, but sha does not suck its life blood. It is fortunate that tbe island has so capable a governor. He is interested in the Negro, and will always facilitate his progress. Though the Negro has suffered much from the eruelty, the rank injustice of the Anglo-Saxon, hn has found, and will find, that the same Anglo-Saxon is thn only dominnnt race which will, in the end, give him fair play, and thnt in climbing up to a superior social condition, he will get the best scaffolding from him. Tha Anglo-Saxon has stolen, nnd sold, and whipped, and killed the Negro, but ha has, of his own volition, nnd at no dictation from tha black, set him free. In America, the Anglo-Saxon set him free, as a war measure, in civil strifa. In England, he was set free by a burst of conscience which rocked and awayed tha Empire. It is fortunnte for Jnmnica that her destinies are influenced by good men.

LETTERS FROM HAMPTON GRADUATE TEACHERS.

EFFECT OF THESE LETTERS. APPRECIATION OF AID. WHY HE IS NOT A TEACHER. THINKS HE IS NOT FIT FOR A MISSIONARY.

EFFECT OF THESE LETTERS.

The publication of these simple records of experience has interested many in the work and the workers, as one of them has just discovered.

VA., *March* 31, '80.

Dear Miss L.:—

When I first wrote to you I did not expect to see my letter in the WORKMAN, and at the time was sorry to see it; but now I am glad. Both myself and school have been directly benefited by it. When I was in Pennsylvania in January I stopped in —— and called to see Mrs. ——, who wrote to Hampton for my address. She gave me quite a lot of Sunday-school books, papers, etc.; also some calico for the little girls. She has also, with the dollar you sent me, made me a present of one of Butler's New American Charts, which costs $5.00. I am very proud of it. It is beneficial to the entire school. I shall not forget that you have a share in it. My school is doing nicely now. I have ninety-three on roll, and the average attendance last month was seventy-eight. I have two months to teach yet, to make a term of seven months. I feel that I am doing some good in this county; but when I go from the school-room in the evening, tired and fatigued, I feel that I have done but little good, if any. I have so many to work on, that I can scarcely see any more. I expect to have a grand exhibition at the close of the seven months, and all the money I can collect by it I shall use in continuing the school. The people are anxious to have me teach longer, so I shall teach as long as I can get pay for it.

Regards to all. Yours truly, W.

APPRECIATION OF AID.

A question often asked is, Are the people appreciative of and grateful for the advantages given them? We believe that they are increasingly so, as they leave the school and take up the real work of life. A young woman who is doing good work as a teacher in Virginia writes as follows:

VA., *April* 16, 1880.

Dear General:—

I have indeed neglected writing to you all this year, and, upon reflection, I did not write to you last year, and I certainly felt it more keenly when I received the *Journal* about four weeks ago, and I almost knew no one had been so kind but you. I thank you many times for your goodness and thoughtfulness of me. I gladly welcomed the *Journal*, for it is such a helper and strengthener to every teacher, and I missed it many times since '78.

I have a good school near the above named place, of thirty-one pupils. My highest number has been forty-one; but the schools are never as well attended in the spring and summer months as in the winter, for the larger boys have to work on the farms and study when they cannot do anything else. My school has improved very much since I have been here; this is my second year, and I have very few who cannot read and write and cipher through multiplication. My work here has been very encouraging. I have had to deal principally with interested parents and anxious students. I have succeeded in interesting a few in regard to sending their children to Hampton when old enough. I have one or two who could safely enter the Junior class if they were only old enough, and those who are old enough have no inclination to go at all. Woodson Merchant is teaching very successfully in this county, and William Davenport in Howard County, adjoining; the latter has a large school at the county town of Howard. Merchant and myself have received many aids for teaching from our very good, kind and benevolent friend Mr. B——.

I read the accounts of the Indians in the WORKMAN with a great deal of pleasure, and also the announcement of the Normal School to be held for colored teachers in Lynchburg next summer which will be a golden opportunity for all of the teachers who can to avail themselves of. I should like very much to attend myself if I could, for I fully realize the need of steady improvement in order to teach with the greatest success and to fill the positions that will be left for us, and to which without the "highest qualifications of principles, discipline and of moral government" we cannot aspire. The colored teachers of this county, as well as the white, have what is called a "Teachers' Association," which meets regularly quarterly, and as many as can do so conveniently meet monthly. It is similar to what are called in Virginia, Institutes. It is very instructive and interesting and all of the members, according to the Constitution, are required to take an active part in the meetings.

Hoping to hear from you when convenient,

Yours very gratefully, N.

WHY HE IS NOT A TEACHER.

No formal pledge to teach has yet been required of the students of Hampton. Without it, all but a very small per cent. have gone heartily into the work. The general sentiment and atmosphere of the school line insured this, and it is much preferred to depend upon this as long as possible.

The young man who expresses this sense in the following letter is trying bravely to get an education as a physician. The need of good medical care among the colored people is undoubtedly very great, and as fast as they learn to trust physicians of their own color, the good that a *good* one can do among them will increase. Meanwhile, he must be ready, like a pioneer preacher, to turn his hand to other work and be a teacher or farmer or both, as well as a doctor, and our young friend is of that sort.

N. Y., *March* 6, 1880.

Dear General:—

I feel it a duty to report from time to time as to how I am progressing. I was wanting to come South to teach when I wrote you last; but after calculating traveling expenses I found I would be able to clear very little, as I should have to come North for work in the summer again. So, after giving it due consideration, I thought it best to remain. Still, I had a strong desire to go, for I should have felt that I would have been doing something to promote the great cause that is pending, "The Education of the Colored Race."

I worked faithfully all summer, saving my earnings to help meet my college expenses; have been studying hard all winter, and like my studies more and more as I advance. I am hoping to be able to enter college next fall if I can save as much this summer as last. I shall probably go to work as soon as the weather opens, as I will quit earlier next fall.

I have purchased a few books such as I most needed. Others I should have gotten but I was anxious to make as large a deposit as I could. As I know you are interested in my welfare, I will tell you the amount I have on deposit. After getting a few things for winter use, a book or two, one case of instruments, I was able to deposit $75.00. I want to save more than that this year if possible. Still, as you know, wages are low, and the only thing that offers itself for any length of time is farming.

General, when you are North, if you have any medical friend that has a book on any medical topic, old or new, that he would like to dispose of at a moderate price or give away, tell him of me, please. My object is to accumulate as much of a library as possible before I leave the North. There is a series of books published in New York, by Wm. Wood & Co., that I am over anxious to get, but they will not sell one without selling all—twelve volumes at $12.00; to get them separate would cost three times that.

By canvassing for a paper I have got Worcester's Unabridged Dictionary this winter. Have not been able to do much for the SOUTHERN WORKMAN this winter. I find it easier to get a man's name than to get his money, but shall continue to work. I take it myself.

Yours obediently, D.

THINKS HE'S NOT MADE FOR A MISSIONARY.

The modesty of the writer of the following may not make him less fit for a missionary, and a little roughness at the beginning of the course is often the best preparation for success. It is an experience that very many graduates teachers understand.

——, POST OFFICE, —— Co., VA., }
May 20, 1880. }

Miss M., Dear Friend:—

I am glad to have the pleasure of writing to you, especially at the present time. Excuse me, Miss M., for making the assertion, but I cannot think what made you think I was a fit subject for a missionary; bear with me a little and I will tell you why I say this.

I left Hampton on the 13th, got to F——, stood the examination by the superintendent, which was as follows: Spelling, 8; reading, 9; writing, 7.50; arithmetic, 8; geography and grammar, 8 each; history, 7.50; Theory and Practice of Teaching, 7.50. He gave me an average which was 7.94; 10 being the maximum grade. He examined me sharply when I told him I was a middler at school.

I found out from the superintendent that where I had to teach was thirty miles from there, in the most extreme southwest corner of the county, where there never had been a school. Miss ——, if I did not have a time getting there, then I do not know what a time is. I got a man to carry me ten or twelve miles on the route. He said he did not know the way any farther. That place was Jerusalem; it was composed of half a dozen rumshops and a courthouse, where the people meet every court day to drink whisky and swap horses.

I got here, and opened school last Monday. I have about twenty scholars; am very well satisfied. I have been around to the colored people to get them to send their children. They would rather I would preach for them; they have actually asked me. Of course I refused, but shall open a Sunday-school for them. I have been to a good many of their houses and have the first book of any kind to see yet. They are very religious, verging on fanaticism; want to shout every time you read a chapter in the Bible to them, which they often ask me to do.

My school will not continue any longer than the 1st of August, but the practical experience I get from the colored people will be worth a great deal to me. I will know how to deal with them better. Not because I have never been raised among them, but because the colored people in the Alleghany and Blue Ridge Mountains, where there are five white men to one colored man, are more intelligent, from associating with the whites.

I am teaching twelve miles from a post-office, where the mail comes in twice a week. I shall go there a week from the 22d, say about the 29th, expecting a letter from *you*, Miss ——. I know you are always busy, but please don't disappoint me.

Excuse this long scribbling and I will be thankful. I am doing it with a tin pen, the best the country will afford.

Very respectfully, H.

SCHOLARSHIP LETTERS.

[Written each year by the students of Hampton to those friends who contribute "scholarships" of $70 a year, or $210 for the course, the estimated cost of a student's schooling.]

FROM AN INDIAN STUDENT.

This letter is—as is quite evident—entirely original with the student, who has been at the school a year, but had considerable knowledge of English when he came.

My Dear friend:

I thought I would tell you about at my tribe. I am Monominee boy. I living in the state of Wisconsin and the Keshena Shawano Co. And all the Monominee Indian bis all supplics long time ago. And all the working himself, he done hunting, he keep working all the time on the farm and bland some oats and corns and are all everything. And I was working in the farm when I was little boy. I know how the working on the farm, and I like to learn some kind worked, and my mother ask, What kind worked I learn. But told her I learn in the farm et working every in afternoon. And I was been to school when is young little boy, end I was stop for long time but once year and I forgot all my lessons end I was working for myself on the woods and my brother and cut the logs and my brother his love me very much. But his 22 years old. And I got two brother and two sisters and other one my brother is ten years old, and my sisters is 13 years old and my young little sister and 5 years old. Ther his I have to say this time. Now I want talk about had I left did my home end I was way of the woods cut the logs and one boy coma of their end he said. Agent he want to see you. And I stop the worked and I go to Agent to and Charlie you ll he go to Hampton School and I told him I dont know I go see my mother she be cau let me, I told her my mother she said all right. But I in see when I come awey left did my home. And I was stay in the boart school. And I stay their in ono week. And one night I hear in call me my Agent. And he said get your boys at 9 o'clock's and ie to cold. And I left did my home but 9 o'clock's at night was very cold and wind I was been of to skating had town to lake that night. And I teke the train down to Green Bay hed five o'clock in a morning and I get my blackfast hed town to Appleton Wie. And I come of the Chicargo and I see the Indian at dancing on the train. I was very sorry I think about at my home first ace the Indim he dancing around in the cars. And I was so frart and some the other boys. Ha took his knife and his hold the knife he dancing round in the cars and I was so afrart and Capt Pratt we are going another car, and me and Oshkenee now I going another car and stay their all night. All next morning I going where the Indians etay and just the same he dancing round in the car and some the other boys and singing ell such things to do, and some the other boye he took ia bow and arrow and he tried to shot some wavee and I could not sleep but three night and three daya and when I went to sleep me and Oshkenenew I going where the white people stay and I am very hard sleep and I was stay their had to Carlisla Penn, three weeks. And I came to Hampton Va. That is I have to say.

CHARLEY SHOMAN.

FROM A MIOOLER.

The following letter is from a young woman in the Middle class.

Dear Friend:

I am happy to have the pleasure of writing you this letter. I am one of the students who stayed here all summer, and I can tell you only what occurred in my daily occupation. I will give you first a sketch of last term. I was in the Junior class and had to study very hard, as my section contained the more advanced scholars, and I being poor in the beginning could not keep up without doing my best.

At the close of the term I felt highly encouraged and grateful towards my teachers, for their labor; for with their instructions and my studying had made my averages such as promoted me to a higher class which is the Middle. I do not live (when I am home) very far from here; only in the western part of Virginia, but as there was nothing I could do which would pay me as well as my work here end as I had the pleasure of staying here I concluded to do so.

Ever sinco I have been here my work has been either in the washing or ironing laundry; therefore having a very good experience I was selected out of the number of girls who stayed here with six others to wash, iron and mend for the boys who worked on the farm, in the crab factory and shops. I think there were one hundred and twenty-five (125) in all. The bell rang at the usual time as during the term.

Before breakfast we cleaned our rooms and finished all of our work in regards to cleansing and so on. Every Monday morning half past seven o'clock we began our week's work which was not an easy task, but all of the girls being good workers and had an interest in whatever they had to do, made it seem light and more pleasant for each one. We finished nearly every week on Thursday with the exception of darning socks, which we did on Friday, and giving out clothes on Saturdays which was a more convenient day for the boys to come over after them. Upon a whole we gave entire satisfaction in our work and nothing pleased us better. Miss G., who has a great interest in this school, stayed here with us all summer and had entire charge over all the work done in Virginia Hall.

She was exceedingly kind to us all and made everything as pleasant for us as one's heart could wish. Everyone loved and obeyed her to perfection, and it was our hearts delight when the General returned and read the reports given him by Miss G. concerning us, during his absence. Everyone enjoyed their vacation here very much. We had our Bible lessons as during the term, only changed the hour that we might attend the church services outside. We had also prayer meeting in the Chapel Sunday evenings, about eight o'clock, and on Friday evenings at the same time we held our girls' meetings as we had accustomed to have been doing in school time. It was conducted only by the girls; a different one every week. A gentlemen who is particularly interested in this school and he being superintendent of a Sabbath school, just a short distance from here, invited me over to see his school; I went and found everything looking very prosperous. All of his little children so interested in his work, that I felt like doing nothing else but rendering my assistance, which I knew was poor, but I was willing to do whatever I could; meanwhile there were two other girls teaching in his school, from here, who commenced a few weeks before I did. After I had gone over one or two Sundays I felt like I never could give up my dear little class for they were so attentive, and eager to learn. My class contained eight little boys from four to ten years old. I was always glad when Sunday came as I might meet their pleasant faces again for their very looks told me how welcome I was, and how anxious they were about their lessons. I have a particular interest in children as I have been so accustomed to my mother's. Nothing will satisfy me better than a school of children when I am accomplished of taking the responsibilities which I am making every effort to do as soon as possible.

I do earnestly thank *you* dear friend for what you have contributed to this Institution for *me* or any one who has been rewarded with your gifts. All I can say or do towards paying you is, I will sincerely try to make such a woman of myself while here enjoying these glorious advantages, that you and other kind Christian hearted friends in the North shall hear if you never see that your money has been given for a good cause.

I truly hope end pray that the dear Lord, who is able to do all things, will reward you openly and accordingly.

I am your very greteful friend, L.

AN INDIAN SCHOOL VISITING BOARD.

Indian sentiments upon education have been further illustrated by a visit from about thirty Sioux chiefs to their children at Carlise and Hampton.

This Indian school visiting board, as Secretary Schurz called it in his last speech et the Hempton School enaiversary, consisted of the following members: Spotted Tail, Iron Wieg, Whits Thunder, Black Crow and Louis Rohideee, from Roseburl Agency; Red Cloud, Red Dog, Red Shirt, American Horse, Two Striks, Little Wound and John Bridgeman, from Pine Ridge Agency; Like the Bear and Medicine Bull, from Lower Brule; Son of the Star, Poor Wolf, Peter Beauchamp and John Smith, from Fort Berthold; Two Beers, Big Head, John Grass, Thunder Hewk and Lonis Primeau, from Standiag Rock; Charger and Bull Eagle, from Cheyenns River; Brother to All and James Broedhead, from Crow Creek; Strike the Ree and Jumping Thunder, from Yankton; Robert Hakewashte and Eli Ahreham, from Santes Agency. Mr. Teckett, from Carlisle, accompanied the Rosebud chiefs as interpreter, with his wife, n daughter of Spotted Tail, and Major W. D. E. Andros of the Yankton Agency was in charge of the party.

Their first visit was to Carlisle, where many of their children are, Spotted Tail alone having four boys there, bright looking little fellows, who came with him to Hampton. The perty had evidently had n fine time at Carlisle, and talked enthusiastically of their entertainment there and the progress their children had made. Part of their business East being the consideration of e project for a railroed across their reservation, from the Missouri to the Black Hills, they went from Carlisle to Washington, where the husiess so engrossed them that they could give hnt one day to Hampton. The Fort Berthold perty, who had meny relations here, sent beck a petition hy telegreph to the Department for two more days, which were allowed them.

The meeting between the chiefs and their young relatives would have convinced the most skeptical that the heort of men answers to heart, as face to face in water, whatever the skin it beats under. One of the boys had grown and improved so much in e yesr and a hslf that his older brother did not et first recognize him.

Morning drill and helf an hour of class recitations interested the chiefs, and still more the workshops, where the language of saws and planes and hammers was something all could understand. They watched their boys' operations with evident admiration and epproval. The steam saw-mill seemed also particularly attractive; they show a special taste for mechinery. After the hour of school end work, the Indian pupils were dismissed to visit with their friends. The Indian girls' cooking class had felt much honored in making the hread for their Chiefs' dinner, and the handsome white loaves did them credit.

In the afternoon the school end n few outside friends met the chiefs in Virginia Hall chepel. After a few words of welcome from Generel Marshall and Rev. Mr. Gravett of Hampton, who told them of n graceful act of some of the hoys in presenting their minister with a pretty lounge of their own manufacture, several of the chiefs addressed the audience through their interpreters.

Spotted Teil, who was the first speaker, showed such un entire misconeeption of the character of the school and its relation to the Indians, that Generel Marshall supplemented his remarks with the following:—

"The Hampton School was astablished loag before Indien eduestion here was thought of. The Government does eot pay as much es it costs the school to educate the Indians, so it has to ask white people to help, and they do help. The Indian Commissioner would be glad to pay the whole cost, but says he has not the money; so the school undertakes to do what it can. We know that these are friendly Indiaas and dress like white men. We are glad to see them here with their handsome blankets and other marks of rank. We would he glad to have some of the Indien students speak and tell how they like it here. We shall endeavor to treat them well and send them heck better then when they came."

SON OF THE STAR.

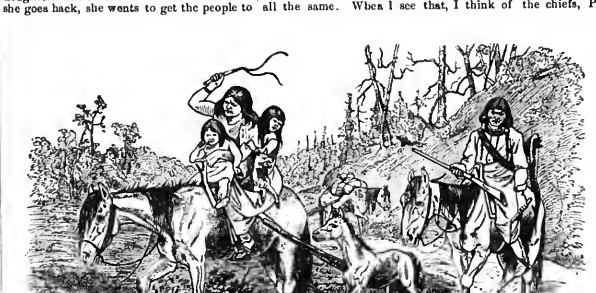
The head chief of the Arickarees thcu made e short speech, saying they had come to see how their children were learning: "They have n great deal here they don't have in our place. I wish f had time to stay and look around more. What they ere doing is for their benefit. I am glad to see the work they are making. I will take the news hack to their fathers and mothers."

A pause ensued, and the other chiefs not seeming ready to speak, Generel Marshall told them that one of our Indian students has asked to say a few words to them. It was one of the older girls who has been here a year and eight months. She had seemed so earnest and yet so simple in her desire to speak to her people, that permiasion was givco, and very simply end earnestly she spoke. As the lerger pert of the chiefs did not speek her lenguage, she had to reach them through two interpreters, one of whom transleted her words into Eeglish, and the other into Sioux.

The interpreter said:

"She says, that efter she had been hers a little while and learned the white man's ways, her heart felt better. When she came eway from home, her fether aad mother all cried for her and she cried too, but now she never cries about home. She likes the places, she likes to uaderstand the white man's ways and the white man's language and to do whet they tell her.

"She says Indiaas' ways ere down in the ground, but the white men's languego is in his head. [The chiefs who listened ettentivly seemed to understand this curious figure of speech end nodded their approval.] She is working hard she says. These Indians have come here and went to know about it, end the boys eshemed to get up and tell them, so she will tell them. She has been hers two winters end knows every teacher on the place. She will never forget them as long as she lives. She meaes the people here in charge of the Indian children. They think just as much of them as they would of their own children. She will tell their names [which she did with oppropriete gestures rather embarrassing to the teachers ie question.] She is goiag to stay here till she learns how to work, and to speak the whits man's languge. Then she is going up homs to tench her people. She is working hard, she says, to get it into her head. She is going to try to be God's daughter. She loves this school-house. When she goea back, she wents to get the people to



INDIAN FAMILY TRAVELING.

send their children down here. That is all, she says."

This speech from a women was listened to respectfully hy the chiefs, who seemed to express approval frequently by grave nods.

LIKE THE BEAR.

A Sioux Chief from Lower Brule Agency, and father of one of the Indian young men at Hampton, eume forwurd, and made an eloquent speech. Ffe said:

"You see I um n red man standieg here, hut when the greet father, the President, tol'd me to drop Indiae'e waye and teke up white man'e, I did it. There is no greater power in the world tban the Great Spirit, and we must listen to Him and do what he wants us to do. The men that ere sent out by the great father the Presidcnt I don't went to do aeything against them, and when they asked for my children, I gave them up. There are many ministers of God in this world, and I went you to take eare of my children. I see you are meking brains for my children; you are making eyes for them so they can see well. That is whet f reach out to the Great Spirit for. That will meke me strong. I want you to publish my words. I alwuys said that when I came where my children are in school f would speak. I am here now, and thet is why I speak. My people have been with the whites in the old days when they traded up there. We have always been friendly to the whites. That's all I've got to say."

ROBERT HAKEWASHTE.

A large, fine looking chief from the Santee Agency spoke eloquently and much to the point. Ife said:

"I've got some relatives here, and the great father told me I could come and visit them. That's why I came. Every one hero represents a different band, and has come to see his people. Every bend that can see ahead and can see how people can make their living, does so.

"The first maa who spoke [Spotted Tail] is my friend. I waat to say somethieg about what he said. He wants a school like this on his owa reservetion. That's right for him, that's good for him, it is his land. But the rest of us havs all got reservetions, and some of us heve claims. We know that aeybody who undertakes this kind of work of teeching never will go to any had piece; they will be sure to have a reward.

"I have dressed like this [in citizen's dress] for twenty-eight years. I taught my people to do so hy dressing this wey first myself. I knew we couldn't get aloeg in the Indian way any more, so I dressed up this wey, end now not ons of my men wears a blaaket, not ons woman wears squaw's clothes. When I see the work done here, I am very glad. We depend on the whites. You boys, if you try to learn, it will be a good thing for your fethers and mothers; you girls too. You must all learn to work; try hard. Learn also to reed end write and to look to God and prey, and when you get homs you will do your people good. If you take hold of this and do not let go of it in the future, it will lead you into a life which will go into eternity. Learn everything they show you and by ead hy you will learn more. After you have learned all these things you will go home and have farms. That is the way you will make your living. There are a great many bands of Indians in this house, and other kinds of people too. Since I have learned the words of God, it makes no difference to me what the color of e man's skin is. If he walks like a man, it is all the same. When I see that, I think of

INDIAN FAMILY TRAVELING.

God. f don't believe God likes the white color only. ff the skins are different I believe God likes all the same, for He made them all."

ELI ABRAHAM.

A native teacher from the Santee Agency school said:

"Seeing so many frieeds makes me glad. I shake hands with you all from my heart. I heve been thinking of my people while sitting here. I used to think that if I could learn something first, I could teach them. Thnt is tho reason I went to school one or two years. After I got home, I taught the children. I have been teaching for eleven years. I learned the ways of the whites, and taught them eo that they could follow them. I want every men to have a house aed sometbing in his house; to have fields end stock ie them. Anyway I knew thet was right. I ahowed it to them. For all children to go to sehool and elso to church and learn the words of God. That is chief of all, that is the road of life. I thought that if f could do thet, all would live well aad increase the tribe. Since I have seen all that is here, if a man can he full of gladness, I think I am gladder than that: I can't express my feelings. This is a good coautry, es far as I have seen it, and a good school. I don't see that we can want anything more. You can all speak English together here. That is good. When I get home to my people, I am going to tell my people what I have learned. That's why I have spoken."

STRIKE THE REE.

An old Yankton Sioux chief, eighty-seven years old, aod nearly hlind, who had insisted on coming to see his grandson at the school, and the rest of his tribe, spoke in a strong, clear voiee. He is said to be as good a specimen of his race as can he fouad in the Dakota nation, intelligent, a true friend to the whites, and alwsys having seconded the agents' efforts to better the condition of his people.

He said:

"I grew up a red maa, and the things I see here, I never had a chence to see before. I have heard about this white maa's church, this religion. I've heard about the holy house. Thet means the church and the school house too. I've looked into that aad I'm very much plessed with it. There is only one Great Spirit we can truly worship. All these people, the red men all over the country are heering ehout it. You are teeching the children to worship the Greet Spirit. That's a great thing end I like it. There is one boy here I want to teke home. You have two sons of ons father. One is sick. I want you to keep the other one. That is why I spoke."

The boy referred to left Hamptos, June 19th, on his return home, for elthough he was not considered hy the physicien to be in any speciel denger, it was thought best to eccede to the request of his friends.

A little tims remained for visiting with their youeg friends, and then the party drove to Old Point, accompanied by those of the students who were related to them, and some of the teechers, and taking a turn round the grounds of the Soldiers' Home on the way. They had visited Fortress Monroe in the morning on their way to the school.

The Berthold perty returned, and had two days of uninterrupted visiting. On Thursdey they had a picnic at the school farm of Shellbanks, and expressed much pleasure with the Iedian hoys' summer camp there, which is just established for the season. Before they left, the chiefs, Poor Wolf and Son of the Star, made short farewell speeches.

POOR WOLF'S FAREWELL.

"I met the whites loeg ego on ths Platte River. Ever since, they heve been my own flesh. I alweys sheke hande with them all—the men and women, down to the smallest children. I see they are well nsed here, all our boys and girls. I heve seen their nice rooms and beds. We have had e pleasant visit. You have given us pleasant drives and made it plessant for us. I shall have a big talk with the great fether in Washington. Thet is ell I have to say here. I have telked to the boys and girls and told them to try to learn English and white men's ways."

Mr. Rohhiaa told the chief that all had been glad to see them here aud that he could tell them—they might tell it to those at home—thet every one of the Berthold hoye and girls had done very well indeed, and improved very mueh.

SON OF THE STAR

added a few impressive farewell words to those he had spoken in Virginia Hall.

He said:

"I have had e talk with tho boys and girls here, and told them to work well; thet is what they ero sent here for, to learn Eeglish, so thet when they go hack, they can speak for themselves end their relatives. Thet'e whet they sent them down here for, to learn to reed and write and talk and work. I went them to learn every kind of work the white man does. They are very young end have a loeg time to live, eo I want them to learn to do everything. When a men knows how to work he is well off; he is rich."

The Berthold party returned to Washiegton on Thursday. The visit of the chiefs has been a very great plesure and encouragement and benefit to the Indian students. We believe that it cannot fail elso to do good to the tribes and strengthen their interest in the education of their children. We wish they could come oftener, as they would like to.

At the same time both Major Andros and their white interpreter, who has lived among them for twenty years, assured na earnestly of their opiuion that the best plan is to edncate at a distance from the tribe, to remove them entirely from netive influence while their characters are forming. As for the health question, both say they believe that deliceey results almost if not quite wholly from hereditary disease and disregard of all health laws in their lives at home, and that the change ie more likely to leagthen than to shorten life.

While the Eastern schools have, we believe, a special and important work, we regard the mission and agency schools as indispeasable, and certainly of great value in creating an atmosphere sustaining to the pupils who will return to their people from the East. There is no leck of room or opportunity for every honest effort to do good.

OUR CARLISLE FRIENDS.

A recent visit to the Indian school at Car-

lisle enables us to make pleasaet report of our friends and fellow-workers thers.

The school now numbers 150 pupils, representiug sixteen different Indiae tribes eud laeguages, though, as at Hampton, the majority are Sioux from Daketu Territory. The intention is to raise the number to three hundred, a large part to be drawn from the lately hostile Utes, who have consented to the arrangement. But for Congressional tardiness and alterations ie the proposed treaty requiring further negotiatioe, Captain Pratt, and his right hand *man*, Miss Mather, would have been off to the plains before now for the children. There is some comfort perhaps in the relief from such an added burden upon their hands in the warm weather.

The regular school work is relaxed for the summer, the teachers snatching their short vacations by turns. A beautiful camping ground has been found on the mountains, near Warm Spriag, Perry county, and detachments will camp out there for a week or two at u time all through the summer, for the ievigoration of the mountain air, and free life, hunting aud fishing and frolicking, as boys of all colors know how.

The industries are goiug on as actively as usual. At present rate of work, the harness shop can turn out two hundred double sets of harness a year. Over a thousand articles of tin-ware were made from April 1st to June 20, and five hundred shoes mended. The boys work under the direction of skilled mechaeics—scarcely any waste is allowed, the more difficult parts being done by the master workmen till the apprenticeo are ready to take bold of them. But as apprenticeo the masters speak very highly of them. Mr. Curtin, the tin-spith, says that Roman Nose and Koba are as good apprentices as he ever saw anywhere, and he reeeutly put a challenge—not yet taken up—into a Carlisle paper offering to back Roman Nose for one hundred dollars against any apprentice in the trade who had been at it the same length of time. All the sewing on the harness is done by the boys, and done as neatly as in any shop. They are making two sets of harness for lady friends of the school. The other industries, of carpentery, blacksmithing, wagon-making and farming, for the boys; sewing and housework for the girls, are also thriving. The farm land consists of twenty-five acres half owned and half rented by the school. Each boy that works on the farm is given two rows of vegetables to cultivate, and a share in the crops. The other apprentices also receive pay, for their eucouragement and education. The Government takes all articles made, for sale at the agencies, which is a very important aid to that industrial department.

Besides Spotted Tail and the other Dakota chiefs who came also to Hampton, Carlisle has been visited recently by a party of four Kiowa, Comanche, Apache and Wichita chiefs from Indian Territory with their agent Major Hunt. The old chiefs, whose unmes are Stumbling Bear, White Man, Wild Horse and Zodiarca, have mild and kindly faces, and were greatly pleased, as well they might be with the condition in which they found their young relatives.

Captain Pratt and his faithful helpers have good reason to congratulate themselves upon all they have accomplished against all the obstacles and trials in starting such an enterprise, which no Goverement aid can wholly obviate, favorable as the Department's purposes evidently are.

A GOOD REPORT FROM CHEYENNE RIVER.

INDIANS RENOUNCING TRIBAL RELATIONS AND ASKING TO SEND THEIR CHILDREN TO HAMPTON AND CARLISLE.

The followieg iuteresting letter from Lieut. G. L. Brown, to the lady in charge of the Indian students at Hampton, contains a very encouraging report of tbe Indians at Cheyenne River Agency. Lieut. Brown's own benevolent efforts while stationed amoeg them have contributed much to their present state of progress, and he speaks from loeg expericeca in recommending the treatment they need and deserve.

The "cards" referred to in his letter are the monthly record of the students iu studies and deportment, accompanied with a short note in English written by the children themselves, and sent regularly to tho Agencies to be given to their parents. They have had a very happy effect upon both parents and children.

CHEYENNE RIVER AGENCY, D. T. }
May 24th, 1880. }

Dear Miss:

Your favor anelosing April cards duly received, latter will be distributed to-day. I think your present plan in making up cards from day to day, an excellant one. Bull Eagle sed The Charger, two influential and intelligent chiefs, have left here for a visit to Hampton and Carlisle. I have known them for the past four years and during that time they have been undaviating and persistent in their efforts to encourage their people in the adoption of the ways of the whites. I knew that you will do all you can to make their visit at Hampton pleasant and profitable to them. The Indians at this Agency are doing very well. Many have settled on separate claims, and twenty-six families have taken up homesteads on Governmcnt land, outside their reservation, having renounced their tribal relations. Their domestic cattle are rapidly increasing, as is also their appreciation of the value of the same.

Tha great work is to thoroughly eradicate thair hereditary ideas of indolence and savagery, and to convert them to habits of neatness, order and industry. This can only be thoroughly accomplished by taking tha children away from the pernicious iuiluences which surround them at home, and placing them in industrial and educational training schools like Hampton and Carlisle.

Much can, of course, be done with the adult Indian by persistent and wisely directed effort but without early industrial or educational training, few white people ever attain to useful man or womanhood. The good people who are taking the initiatory steps in this new departure of the home missionary work, deserve the hearty support and active sympathy of all well-wishers of the Indian race. That your humane efforts may meet with dua reward of success is the sincere wish of

Yours respectfully,
GEO. LE R. BROWN,
Lieut. of 11th Infty.
Acting Indian Agent during absence of Major Schwan.

In a later letter, June 14th, to Capt. Pratt, Lieut. Brown says:

"A citizen has been appointed to succeed Major Schwan but he has not yet put in an appearance. I hope he may prove a good man as it would be too bad to have these Indians run back into their old ways again.

The census enumerator found at the Agency ninety-four (94) *Indian Citizens*, Homesteaders, who have renounced the tribal relations, &c. Great interest is taken in education. Many Indians have come to me asking me to have their children sent to Carlisle."

———, *May 17th*, 1880.

My dear Captain:

Your letter of the 14th inst., and the photographs are duly received. I shall keep the pictures to show to those interested in the welfare of the Indians what educational influences do for the young Indians. These pictures will be a more convincing proof and argument in favor of the influence of Hampton School than hours of talk—the whole expression of the faces of those people pictured has changed from listless ignorance to bright intelligence and interest. I congratulate the school on its success with these people. The way to humanize the Indian is plain—Educate the young in the States away from the influences of their tribal associations and the rising generation will be saved.

With best wishes for success in this work,
I am, yours truly,
S. B.

SIOUX INDIANS TAKING UP HOMESTEADS.

In another column will be found a letter from Lieut. G. L. Brown, of Fort Berthold, Dakota, giving the interesting information that ninety-four Indians at Cheyenne River Agency, Dakota, have renounced their tribal relations and taken up homesteads on Government land outside the reservation. This movement must have a great effect upon the tribe as well as upon themselves, and it ought to have some influence upon white opinion as to Indian possibilities. To give up their share in tribal claims, and all dependence on Government rations, and start out for themselves in life, like an "unprotected white man," shows a long headedness and energy not commonly expected of an Indian, though these are not the first who have done it.

One objection to apportioning the Indians' land to them in severalty has been that, though made inalienable for twenty years, it would long before that be pledged away for ponies or whisky, and by the end of the term not a rod of it be held by an Indian. But it is a question whether this very getting down to hard pan in soma way—no less disgrace to those who would cheat him—would not be the very best thieg that could happen to the Indian, who, like other men, can only learn the value and care of property by earning it. The ration system has its own disadvantages, like a church donation party, pauperizing while it seems to pay a debt. At any rate, this voluntary exchange of its heredita for the white man's road of daily labor and self-respect should be in certain cases encouraged by the Government, whose debt to these new citizens is ie no degree eancelled in honor by the renuuciation of their claims upon it. That with this new movement towards independence there is, as Lieut. Brown reports, a corresponding "great interest in education," is just what should be expected. It indicates tha best way to pay the nation's debt of honor to them, and the only way to protect the Indian from the white man and the white man from the Indian. Whether the Indines' lands are divided amoeg them in severalty or not, the next twenty-five years ought to see every oee of the forty thousand Indiae children fitting in industrial schools, under Christian influences, for their new future.

A QUEER CAUSE FOR DISCOURAGEMENT.

A Hampton worker, enlarging, recently, with some enthusiasm, upon the success of Captaie Pratt's noble effort at Carlisle, was surprised by the inquiry—we regret to say from au individual also engaged in a benevolent enterprise.—"Is not the success at Carlisle discouraging to your effort at Hampton, with your fewer Indians?"

Carlisle's success discouraging to Hampton! The notion is a novel one, and somewhat amusing. Let us hope the questioo was at least only meant as a jest. But if anyone entertains the idea that the success of either effort can be discouraging to the other, we would say to them, Please don't. Not to make any professioos of double-extra perfection and superiority to the rest of our race, we venture to say for ourselves, and Carlisle as well, if anybody will succeed in a larger Indiae school than either of us have, we shall both be more than ever encouraged. With thousands of Indian children in no school at all; with hundreds or thousands declared ready and eager to come to us if we could but take them, what place is there for jealousy? Hampton rejoices in Carlisle's success, and so, we are assured, does Carlisle in Hampton's, but both successes together are not enough to satisfy us. The central idea of the Indian work of both Hampton and Carlisle is not bounded by their own horizons. It is nothing at all less than the education to industry and Christian civilization of *all* the Indian children, for whom it is needed as much as for all New England children or all Virginia children. When this idea is seen to be taking hold of the public mind and will, Hampton and Carlisle will need no more encouragement.

A WEEK OF FRESH AIR.

No charity surely could have come straighter from the heart of Him who took the children in His arms, and for their sakes became poor, than the plan devised in New York City a few years ago for giving the children of the poor a breath of country air in the summer. No pen can describe the sufferings that these little ones and their parents have to endure in their crowded, dirty tenement houses, through all the long, sweltering days of summer, when all who can, have fled to the cool mountain and sea-side resorts. Their first excursion, to these unfortunates, many of whom had never seen the country before in all their poor little lives, must have been like a glimpse of Paradise. The New York *Evening Post* continued the good work year after year through its columns, and the "Fresh Air Fuad" it established grew, and the original was added to till now there are not only excursions of a day, but visits of a week or a fortnight to the country, kind farmers and others opening their gates to the little refugees who with this early experience of country hospitality will not be likely to grow into tramps and bring terror to homes like those that welcomed them. There are also floating hospitals for sick children and their mothers,—big hospitable steamboats that carry the poor babies and their weary mothers away from the pestilential breath of sewers, up and down the breezy Bay. And there are cheap sea-side hoardieg places for working women. And at Bath, Long Island, is a Summer Home for children, founded five years ago by a benevolent lady of New York, Mrs. Stokes. A hundred and fifty children were brought there every week from the city tenement houses, to play on the beach, and baths in the sea and breathe pure, bracing air for a week. Even in a week the pallid cheeks get a touch of color, weak limbs grow stronger, little hearts get back some of their child birthright to joy, and little lives are often saved—must it not be for something better than prison cells? Nourishieg food is provided them in abundance, seven cows are kept to supply pura milk, and yet all this can be given to a poor child for two dollars—for the week. This beautiful charity is under the charge of tho Children's Aid Society which asks for contributions for the purpose, the gifts to be sent to its Treasurer, Mr. Geo. S. Coe, at its office, No. 19 East Fourth Street. We very gladly give whatever influence the SOUTHERN WORKMAN may have to the furtherance of this blessed work. In the circular kindly sent us by Mr. Charles L. Brace the founder of this noble society, are published several letters written without help or suggestion by some of the grateful little ones. Our readers will be interested in the following:

NEW YORK, *April* 15, 1880.

DEAR MISS LAZARUS—I am going to tell you about Bath.

I was at Bath. I enjoyed it very much. I will tell you tha thing I enjoyed was the swimming. I ducked a wholo lot of boys. O, what fun! I had some milk, and I hope we shall go again this summer. I hope all the boys will thank Mr. Brace, Mr. Skinner and Mr. Holt, for giving us such a pleasant excursioe.

Yours respectfully,
HENRY KNALITZ,
Age 13 years.

ANOTHER ITALIAN'S NOTE.

NEW YORK, *March* 4, 1880.

DEAR MR. BRACE—I can not help thinking of the fun I had at the Seaside Home. I could not have enjoyed it better than I did, the bathing especially, it was such fun; and still more the climbing of trees. When it would get dark all the children used to go to the shore; but me and a few other girls used to stay and climb the trees; such fun I think I will never have again. Then came the morning that I had to come home.

Miss Zincke came and called me up pretty early, 6 o'clock I think it was. I was so sorry when the morning came. I had bid all my playmates good-bye, and gave them each a pear which I had from the night before. But as I can not think of anything else, I think I will stop; but this is one sure thing, that neither my father nor my mother was willing to let me go, but when I came home they were astonished. They said that the country was just the place for me.

I close my letter with my best respects, hoping that I may be able to go next time for a whole week, so good-bye.

Yours truly,
KATIE BARBRACCO,
25 Pell street.

MR. BRACE: DEAR SIR—I want to thank the kind people who sent us to the Summer Home. I was living out when we went to the country, and I got permission to go. I brought the lady's little boy. I was so glad to go, I did not want to come home again. I love to go in bathing and to take a walk. I am wishing for this summer to come, so I can go again. I can't tell how grateful we all are to the kind people who saved so many lives through the summer. We had fireworks one night, and it was lovely to watch the sun setting; it is so nice, too, to watch the lovely moon rise and shine on the water. To thank you, I have not words enough. Gratefully yours,

SARAH MARTIN, age 13 yrs.
March, 1880. 157 Franklin st.

THE HEAD AND HAND OF THE NATION.

In the hubbub of a Presidential campaign, the average American citizen is so much occupied in considering and discussing the chances of his candidate for the executive office, that the comparatively little attention is paid to the choice of the person who is to represent them in the Lower House of Congress. This is an unprofitable sort of enthusiasm: a kind of save at the spigot and lose at the bung policy; for Congress is a more potent power than the President, making the laws that he is sworn to see executed. He is simply the hands that act, while Congress is the head that plans. To be sure he is negatively a legislator, as he can veto legislation he thinks unwise; but vetoes are few when a majority of Congress and the Executive belong to the same political party. It seems then, if we can only have ability at one end of Pennsylvania Avenue, it is better to have it at the Capitol than at the White House end.

It is just and proper that a man, who seeks to be President, should be known by the people whose votes he asks; and by the running of our party machines, a candidate's character and antecedents are pretty sure to be picked down to the very pin feathers, between June and November. Congressional candidates share this picking to pieces to a moderate degree, but the newspapers of a district can hardly be expected to so thoroughly ventilate a man as tha united press of the country.

To my mied, men should be sent to Congress capable of grappling with national affairs—men of thought and of cultura, not local partizans. A man may be very sound on the not State officers, that they are paid by the nation and not hy States, and that their duty is to the nation, first, last, and always.

Sometimes, in tha Lower House, important questions are decided by a single vote, and it behooves us to see that we send nohody to Congress incompetent to cast that important vote. To select a man simply hecaus a is believed he will always vote at the party enll and crouch obedient to the party whip, is simply sending a voting machine to Wash-

ington, and telling the party leaders to manipulate the crank, and turn out ballots as moulds do bullets. Such automatons are better at home, out of the political malarin that infests Washington.

Another kind of candidate to be avoided is the machine politician, a being who thinks taxpayers owe him a living under all circumstances, and that he was born to live with his nose in the public crib. Machine politicians flourish best in cities, and an atmosphere impregnated with a smell of saw dust and poor rum is very favorable to his highest development; but rural districts breed the same kind of animals, whose final object in life is a seat in Congress. Albeit they will accept any public office (with a salary attached) regarding it as a stepping stone to the Capitol. 1880 has been a bad year for Machine Politicians, and they have received some rude shocks; nevertheless, they are seatched, not killed, and will appear in many districts before November in some new form or another. When machine politicians get very much out of repair, they generally appear as Reformers, or under some synonymous title, affarding charming illustrations of the cynicism that "It is the impossible that always happens."

It has became the fashion of late years, it would seem, for great railroads and other "rings," corparate and unincorporated, to owu several members of Congress in the same sense that a client can own a lawyer's services by retaining him and paying him. For the people to send parties thus *retained* (to put it mildly) to Congress as their representatives, when they are really the representatives of some "ring" or another is a remarkably silly thing to do. If, alas, it he trus that every man has a price, let us send only high priced men to Cougress: cheap slaves never were, and never will be good investments.

A man with only a single idea is even a worse Congressman than one with no idea but to vote as the party whipper-in directs. Single ideas men have the fullest faith that the whaln universe of ideas revolves round their own pet one, while in all human probability, their "one idea" is a matter of sublime indifferance to all but its possessor. Congressmen should have an even developmeut, as the athletes say, for Congress is no place for specialists. The dangers that surround a nation are various, and legislators are called upon to treat them all—it won't do to call in a chiropodist to treat measles, whooping cough, fevers, etc.

Endless would the task of painting out all the kinds of people that should *not* be sent tu Congress; but it is only fair to add that as thn American people are judged by their representatives, it is only pruper that thase sent to Congress should not only knuw how to behave like gentlemen, but be willing to put in practice what they know. To see an honorable member train his legs at the speaker as if they were 13 inch guns and his desk a gun carriage, is not an edifying spectacle, nor is any halo of patriotism cast round a member by well directed squirts of tabacco juice from his ruminant neighbors.

If we would have fit representatives we must see that fit men are nominated—if decent citizens take no interest in the men selected, rest assured the other sort will, and the candidates will fitly represent those who chaose them. Too little attention is paid to primary meetings, and if a first class district send a third class man to Cangress somebody in that district has blundered, if they have not done something warse.

The House of Representatives consists of members from all the States, and its ability is the average ability of its members. A very bright man from A or a very stupid one from Z does not make the House bright or stupid, its brilliancy or stupidly will be found in its average. Every voter has a chance to determine the calcher of tha next house, and on him will rest part of the blame if it be small, and will be part of the praise, if it be large.

National questions will be before the next Congress—the periods of the War and of Reconstruction are practically over, and the policy best for the United States as a nation will be the most prominent subject of debate. Men fit far the discussion of such questions are the men we want, men whose political notions extend beyond the shadaw of their own Court Houses, and who are not blindly convinced that every one from every section hut tbeir own is either a knave or a fool. Looking at Congress fur the past twenty-five years, it would seem such men are not common, yet it would be too much of a confession of weakness to say they did not exist in the country.

Let us then be careful in our selection of Congressmen this fall—we cannot afford to make mistakes—we want men we can trust, for we will have to trust them when elected, for about two years, and an ounce of prevention is worth pounds of cure.

We want no "Blowhards," who talk to hear their own voices, nor "Owls," whose only wisdom is in their looks. We want live men, alive to live questions, and not funereal specimens of humanity, happy and eloquent only in a fading past.

T. T. B.

INDIAN FAMILY TRAVELING.

The Sioux own large herds of small ponies, which when the snow has covered thn prairie grass too deep to be removed by pawing, resart to thn bark of the cottonwood tree, and between the waste of the camp-fires and the forsging af the ponies, the seanty supply of timber is rapidly becoming exhausted.

On the march those not needed(!) to carry the men are used, with the women and dogs, as beasts of burden. The tent-poles are fastened on one side of the pony and drag along the ground forming on ather occasians an ambulance for a child or sick woman, but more frequently carrying household utensils. The lodge-skins are rolled up and slung cross the back, on thn top of which is perched n child or a feeble woman. The dogs have two smaller poles attached to the collar, to which small bundles are fastened. The "baby-carriage" consists of a little cage made of saplings, fastened to a couple of poles, instead of wheels, to the sides of which the children, wrapped in stiff untanned buffalo-skin, are tied. Tha leading of the ponies, (no easy task if the animal chooses to he abstinate,) the urging on of the dogs, the caring for the children, all fall to the lot of the women, who are themselves loaded almost as heavily as the horses. The men, an the best ponies, ride in advance in gallant array. If their march takes them across the Missauri they must swim. This is taken for granted, even by tha panies. When the day is ended the women set up the teepees, build the fire, if any game has been killed bring it in, cook it, serve it, eat what the men leave, and at last, tired, and perhaps hungry and wet, lie down on the ground to forget, for a few hours, that existence is misery.

—*N. Y. Christian Weekly.*

We make the following extract from a letter lately received from Prof. Guyot, whose name is undoubtedly familiar to most of our students, as the author of the geographical series used in the school. His large and varied experience makes his opinion of great value, and all who are connected with the Hampton work, will appreciate his commendation.

"I assure you that all we saw at Hampton has given me a renewed conviction of its present usefulness, and has raised in my mind high expectations for its future as a national institution of great value for the regeneration of the Southern and Western countries so largely peopled by the colored races."

READING FOR COLORED PEOPLE.

BY ORRA LANGHORNE.

To students who wish to undertake a course of reading on the first century af American history, I would suggest the fullawing list of boaks, tp which they can add indefinitely from time to time. I cannot give prices fur all the boaks mentioned, as they are published in various styles, nor can I tell exactly where they can be procured, but will state in general terms that tha Harper Bros., New York, and other leading pulishers send catalogues of their books on application. Any hookseller in a country towu will aid persons desiring to buy books, which ha is unable to furnish, hy ordering them from tha publishers. I may add that it is a good rule for a person writing to mnother on his own business to enclose a stamped envelope, plainly directed to himself and giving his pastoffice and State *in full*.

In regard to newspapers, I should especially recommend to those wisbing general information the *Independent*, New Yurk City, n very fine weekly journal; and for a genuinn newspaper, daily or weekly, I know of nana better asa high-toned paper, advacating equal rights far all, than the *Republican*, Springfield, Massachusetts. Any paper will send a specimen number on application.

For Histarical warks, I suggest,—Bancroft's United States Histary; Magill's Hiatory of Virginia; Howe's Histary af Virginia; Holmes U. S. History; Henry Wilsan's Rise of the Slava Power; Barnes' U. S.; Greeley's History of the Rebellian; Lee's Memoirs of the Revolution; A. H. Stephen's War Between the States.

Biography,—Irving's Life of Washington; Life of Gen. Lee; Life of Garrison by Oliver Johnson; Weem's Life of Washington; Weem's Life of Franklin; Wirt's Life of Patrick Henry; Randall's Life of Thomas Jefferson; Miss Randolph's Letters of Jefferson; Life of John Brown; Biographics of all our public men; Greeley's Recollections of a Busy Life.

Poetry,—Longfellow's Works, Bryant's Works, Whittier's Works.

Miscellaneous,—Irving's Works; Mrs. Stowe's Uncle Tom's Cabin; Cooper's Novels; Simms' Novels; Bayard Taylor's Centennial Letters; The Rising Son, a valuable book on the African race, by Dr. Brown of Boston; The Underground Railroad, by Wm. Steel, a colored man of Philadelphia.

———, Md., *July* 9, 1880.

Mr. ———,

My Kind Friend:—

Your last consignment of clothing and ather articles reached me June 2d, one day prior to our commencement. I wish I was able to frame a proper expression of the thanks af this community far your continued and liberal kindnesses to it. Suffice it ta say, the children were delighted with their presents and wish me to tender their thanks for them. It will probably be of interest to you ta know that every feature of aur closing exercises was a perfect success.

The 3d broke upon us gloomy and portentous, and all wern apprehensive that we should have a bad day; but our fears were soon dispelled when the sun brake forth without a cloud to dim its brightness. The children assembled at an early hour; the examination, however, did pot begin until 10 o'clock, as the trustees and other interested parties did not arrive before that haur. The time from 10 A. M. to 2 P. M. was occupied in an examinaion of the school in branches taught, viz.: Reading, writing, arithmetic, geography, history und grammar. I was well satisfied with the proficiency evinced by the pupils, and felt amply paid for my year's labar. A recess for diuner was now takeu, and it was really pleasant to see the guests partaking of the viands in genuine pic-nic style, no distinction being made on account of race or condition.

At the ringing of the hell, the concourse (for there must have been 200 or more, among them a smart spriakling of whites) of people repaired to the school-house, which was soon crowded to its utmost capacity. The literary exercises were begun with music by the school. Declamations and dialogues ensued, in which, though the heat in the room was oppressive, the children acquitted themselved most creditably. At the conclusion of exhibition the audience was addressed by Colonel Dent, president of school board. He had been an attentive listener during the whole day. I will not attempt to reproduce his words. He spoke in a very complimentary strain of the efforts put forth by both teacher and pupils. He said he had been both surprised and gratified, and knew af no school better sustained than mine. He hoped I would remain among them, which I have consented to do. I responded to his remarks. Among the guests were several white ladies, who seemed to enjoy the exercises thoraughly. I think the piece which elicited greatest applause was Artemus Ward's Oration, delivered by a little fellow. His gestures and manner of speaking were very appropriate. A—— C—— has been kept at home ta assist her parents, who have been ill. She was not examined, but committed a recitation for the exhibition. After the exhibition the children "tripped the light fantastic taa" until they were carried home. Thus closed one of the most pleasant days of my teacher-experience.

The schools are now closed, to reopen September 1st. I feel as though we can never discharge our indebtedness to you.

Yours very truly, L.

OBITUARY.

THE Hampton School has this munth sustained a real loss in the death of Jas. B. Towe, a graduate of the class of 1875. Mr. Towe, both hefora and after his graduatian, was a faithful worker far his people, and at the time of his death, was not only at the head of the largest primary colored school in Norfolk, but was also employed by the Hampton Schaal as an agent in the North. His vacations had for several years been spent in thn service of tha school, and ha was becoming well and favorably known throughaut his special field in tha Narth—wherein his place will not be easily filled. His last illness, an affection of the heart, attacked him in Lowell, Mass., from which place he was brought back to his home in Norfolk, only to die after mueh suffering, on Thursday, July 15th. Hin funeral took plaen from the Bute St. Baptist Church, of which he was a member and the S. S. Superintendent, and was attended hy a large number of friends, school children, and the Carthagenian Club or literary society to which he belonged. Three peices, selected hy Mr. Towe himself before his death, were sung by his own school. The Hampton School was represented officially by Messrs. Hamilton and Daggs, who iaform us that Mr. Towe and his work are spoken of in the highest terms by the people among whom he lived. His widow (Annie Taylor, to whom he was married December 23, '19) has the sympathy of many friends, and the officers of the Hampton School are glad to hear witness here to the high stand which Mr. Towe, both as a student and an employe of the school, bas always had in their estimation.

WE copy from a letter lately received the following sad facts, to which we are requested to add the expression of the sincere regret of the officers of the Hampton School, for the loss of a young man whose future promised to be a credit both to himself and his teachers.

"TAISNAT, N. C., *July* 13, 1880.

"*Dear General:*—I drop you a few lines to inform you of the lass of a good and able worker amang our people Sauth, Mr. G. M. Harrinan, a member of Class of '75, and recently a student of Fisk, where he had been prepsring himself for Africa. We had been together ever since the spring of '70, until Sunday, July 4th, when he was called nwny hy the mighty power af God. He was found dead about a half mile from this place an his return from the country where he had been on Saturday. He had been teaching here nearly three years and was esteemed hy all who knew him. He was a member of the Missiunsry Baptist Church at Enfield, into which he was baptized in 1875. He lived and died a Christian and is now at rest in Heaven.

The cause of his death I am unable to state, but it is supposed vertigo. . . . . .

Youra respectfully,

HENRY THOMAS.

ITEMS OF NEWS.

FOREIGN.

An official decree has been published in France granting full remission of sentence to all individuals convicted of participaiion in the insurrection of 1870-71, and subsequent insurrectionary movement. The *Standard's* Paris despatch says it is calculated only nine persons will be excluded from the amnesty, and they will get a free pardon.

At a meeting of the trustees of the Duteness of Marlborough's Irish Relief Fund, in Dublin on Saturday, very encouraging reports of the improved condition in the West of Ireland were given.

A despatch from Dublin says: "The weather all over Ireland up to the present has been most favorable. It is expected that the potato crop will be enormous. It promises to exceed anything seen in Ireland since the period anterior to the famine of 1847. Root and cereal crops are also luxuriant."

Lord Shaftesbury on July 9th unveiled the statue on the Thames embankment, to Robert Raikes, the originator of Sunday schools in England a hundred years ago. Rev. Dr. Vincent was present on behalf of the Sunday schools of the United States. Rev. Dr. Murphy, of New York, read a portion of the Scriptures, and Rev. Dr. Todd, of New York State offered prayer.

DOMESTIC.

CENSUS NOTES.—According to the new census the cities showing the largest ratin of increase are Atlanta, Ga., 106 per cent.; Denver, Col., 616 per cent.; Minneapolis, Minn., 214 per cent.; Milwaukee, Wis., 92 per cent.; St. Paul, Minn., 100 per cent.; Waterbury, Conn., 103 per cent.; Meriden, Conn., 80 per cent., and Camden, N. J., 84 per cent. In 1870 Atlanta had only 21,789, in 1880 it has 54,693. The first ten cities in population are in the order named New York, Philadelphia, Brooklyn, Chicago, St. Louis, Boston, Baltimore, Cincinnati, San Francisco, New Orleans.

A portion of the City of Waterloo, Iowa, was flooded last month by a heavy rain-storm. Barns and small buildings were moved from their foundations, and more substantial buildings were partly submerged. Two boys and one girl were drowned.

Three heavy thunder-storms passed over the region round Montgomery, N. Y., the lightning striking and burning several buildings, all at one time, within a radius of a few miles. Two large barns with valuable contents were entirely destroyed.

According to the census just taken, St. Paul, Minn., has a population of 41,819, an increase of 21,607 in ten years.

Colonel William Tilden Pelton, the nephew of ex-Governor Samuel J. Tilden, is dead.

One hundred and twenty-seven deaths were recorded during 24 hours in New York city last week. Of these 83 were those of children under 5 years of age of whom 49 died of summer complaint.

There were fifty deaths from yellow fever and eleven from smallpox in Havana, Cuba, during the week ending July 24.

TEACHERS AND STUDENTS $50 to $100, or $200 per month, during VACATION. For full particulars, address. J. C. McCURDY & CO., Philadelphia Pa.

Horsford's Acid Phosphate is especially serviceable in dyspepsia and all diseases following therefrom.

THIS PAPER may be found on file at Geo. P. Rowell & Co's Newspaper Advertising Bureau (10 Spruce St.), where advertising contracts may be made for it IN NEW YORK.

HORSFORD'S ACID PHOSPHATE
For Nervousness.
JOHN Y. SIMPSON, M. D., of Monterey, Iowa, said: The "Acid has—to use the lady's own expression, to whom it was given as a Nerve Tonic—made me a new nervous system."

Horsford's Bread Preparation
makes delicious light and sweet Rolls without the use of lard or butter, that dyspeptics can eat. Try it.

Horsford's Bread Preparation
does not change in strength by being kept on hand a long time. If hard, powder it, and it is as good as new.

VISITS TO COLORED SCHOOLS—No. 2.

BY ORRA LANGHORNE.

The grammar school for colored pupils in Lynchburg, is taught by Mr. Yoder, a worthy Pennsylvanian, who came to the city to teach the colored children before the public schools were organized, and is now the principal of his department. His grade is the highest allowed colored pupils up to this time, but it is said now, that at the close of the present session a class will be formed for high school instruction next term. I found this school, which is taught in one of the substantial buildings belonging to the city, less crowded than those of lower grade, in which the number of teachers is far too limited, and the pupils looking very orderly and intelligent. After some of the classes had recited, Mr. Yoder consented to gratify my taste for asking questions, and my first query "whether was once secured the attention of the school, which hesitated a moment for an answer, and then a very bright looking, tidily dressed boy, the son of one of our popular barbers, said, "the children of Israel were slaves in Egypt." Further questions elicited the replies, that the Egyptians were the foremost nation of that age in knowledge, and that the Hebrews, a wandering and barbarous people, had, while sojourning there, learned much of various arts from their rulers. "Now," said I, "can any of you tell me what benefit the African race has gained from being enslaved in America?" Just opposite me sat a tall, gloomy looking black boy, whose dusky features worked with emotion, and his sullen eyes flashed as he said in a stern, deep voice, "None. There was no benefit in slavery." "Let us see about that" said I, "can any of you tell me what was the condition of the African people when brought to this country?" "They were savages" said several voices promptly, and without looking at the sombre face which seemed to reflect the sorrows of his race, and gazed angrily at me, I continued "now, I want to ask the boys which they would prefer to be, an African chief wandering about the forest naked, his body rubbed with rancid oil, his head decked with beads and feathers, utterly ignorant and barbarous, an idolator, perhaps a cannibal, or to be a well-dressed, intelligent, educated Christian citizen of the United States?" Scarcely had I completed the sentence, when the jaunty looking little fellow before me tossed his curly head and said in clear, ringing tones, "An American citizen!" His words were echoed in laughing chorus by the school, and even the sullen eyes of the dark face, which had glowered so fiercely at mention of slavery, relaxed, and a faint smile lighting up the stern features showed that a new idea had dawned on a mind oppressed with painful memories. Varying my questions so as to describe the African woman in comparison with her cultured American sister, I received a very prompt answer from all the girls, in favor of the Negro-American damsel. I then proceeded to explain to my young friends that I did not mean to advocate or even to palliate slavery, that I felt that terrible judgments had been sent upon our infatuated people, for persisting in holding slaves, but I thought the colored people in America might learn from the sorrowful page in the story of their race, that with them as with the Hebrews of old, their sojourn in the land of bondage, had been overruled by an all-wise Providence as a means for transforming the untutored savage into a civilized man, making him a worthy and useful citizen of an enlightened country. I was somewhat surprised when the teacher, who had listened smilingly to my discussion with his pupils, remarked, "Really, Mrs. Langhorne, I never considered the subject in that light before."

The question as to the superior mind of boys or girls here, as in every other school I have visited elicited a prompt answer from all the males in favor of their own intellects, and it was some consolation to me as a female, to find that the teachers by no means agreed with them, but inclined to the opinion that with equal chances the girls made as good progress in their studies, as their self-satisfied companions of the opposite sex.

I showed copies of the SOUTHERN WORKMAN to the pupils and teaches of the different schools and told them of its valuable articles on health, as well as the large amount of general information to be gained from its columns, and the teachers promised to use their influence in getting subscribers for the paper.

Hard Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On each one will be found full directions how to prepare Spanish Salad and Deviled Crabs,—two dishes concerning which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surprising delight of the palate. The meat of the crab is, beyond peradventure, the most delicate and delicious of all seafood, far exceeding in fineness of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than if they bought the crabs in the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For picnics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in packing the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $6.00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $1.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post-office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed at the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work from all parts of the country, is solicited and will be done cheaply and well. Estimates will be sent on application.

INTIMIDATION OF THE NEGRO.

The *Nation* holds that the Negro shows timidity in asserting his rights, and suggests as a cure, the voices of Northern orators of repute on the Southern stump. This is, unfortunately, a year of potato bugs, army worms, and political oratory. Has not the country suffered enough from these pests, without deliberately putting the worst of them on the South? The Negro is still "intimidated." But the shot guns are now on the brackets, in the Gulf States, and there is no longer visible manifestation of the Ku Klux. Physical force has ceased to play any open part in politics, but a more dangerous, subtle, permanent power is at work; the moral and intellectual strength of the Southern white. It reaches and controls the Negro's nature. It strikes him where habit and tradition make him weak. It divides and commands him. It takes advantage, and at times, cruel advantage of his condition, crippled by a century of subjection. It operates on his weakest line of defense. An equipped and educated race press against another race without education, and for the most part ignorant, from which ignorance and want of skill in handling its crude mental and moral resources, come weakness. It is crude militia massed against troops who have tramped together under fire. It is the timidity of the Negro against the temerity of the white. To transform this timidity into courage, the *Nation* proposes a specific in the way of "Northern speakers of repute," meeting the Negro face to face. This will hardly do. It fails to meet the needs of the case. A successful orator must know his audience. Furious appeals to the blessings of civil liberty fall flat on people who hardly understand the nature of civil liberty, because they have been kept out of such knowledge. An hour's talk from an eloquent speaker will do as little good as an hour's rain, once a year, on a parched field. Kind people, at the North, would remove the Negro's difficulty as they would treat a disease, by some quick, specific remedy. When the doctors say, "the thing for you to do is to improve the general tone of your health by careful diet, persistent temperance, and constant care," the patient is angry, for he wishes a dose which may be quickly taken and produce instant health. He wishes to step from the apothecary shop a well man. The Negro difficulty can not be treated by any specific which will work wonders. Northern speakers cannot touch a deep seated social difficulty at the South, and remove it. They may do no harm. They can do little good, civilization is a plant of slow growth. It is a sad mistake to consider it a mushroom. Stump speaking has done little in the way of education. Otherwise the hackwoodsmen of Kentucky and Indiana would be in the front ranks. The Negro needs education of the head, heart and hand, above all things. If Northern speakers would inform themselves about the true condition of the Negro, and then take to the stump in the North instead of the South and inform Northern men of the real need of the Negro, there would be a splendid use in it. The imperative demand here is for education. Until the people of the United States realize it in its broadest sense, all light and pleasant methods will prove delusions and snares. It would be as easy to blow off, in an hour, the dense smoke of Pittsburgh, with a pair of bellows, as to talk off the ignorance and "timidity" which we, the stronger race have saddled on the Negro for several hundred years. There should be no diversions or side issues in this matter. The needle of the social compass bends toward education of the head and hand. Those who have to do with the Negro, know the supreme need of the hour is primary education, and they mistrust the uses of political oratory as elementary instruction. The *Nation* believes that these Northern speakers will show the colored man that "he has numerous and powerful friends interested in his welfare." This is now an old story with the blacks. They believed in their powerful friends, they received freedom at their hands. But the Northern man is now no longer a hero, with sledge hammer and cold chisel cutting away the chains of bondage. These powerful friends seem to have become lukewarm. Their immediate representatives, the carpet-baggers, are gone. The intelligent Negro may justly say, "we are in sore need of aid. If you are really our friends, give us schools, and put us in a way of copeing with this stalwart race. You gave us the ballot. Teach us how to use it."

Just now there is no crisis, no need for passionate appeals to the black or white. There is no grand tide in national affairs which must be taken at the Presidential flood. For every orator that the North may send to the South there are a hundred Southern debaters ready either to reply, or meet them with a "still hunt." The *Nation*, strong and independent, fails, perhaps, to comprehend the stubborn task before us, in putting this race on its feet, in placing it on a plane of civilization where it will cease to be "intimidated" by a race which is the strongest of the earth, and which holds every advantage over it, from the blood in its veins to the soil under its feet; a race which is meanly selfish in its relations with others, and whose brutality is redeemed only by the splendid charity and philanthropy of a few of its citizens. Aside from this, there is a curious process of "evolution" going on in the South. In the break up and reorganization of parties, the Southern whites will soon be demanding Northern speakers of both parties. So far the teeth of the Southern white have been of too young a growth, in the line of the new departure, to eat Republican fruit from the North. Times are changing slowly. Here in Virginia, there is rapid change. As the new men in politics will call for Northern help, all that is done in that behalf will operate well for the Negro. Elevate the white, and the black rises by a sort of capillary attraction.

MEMORIAL SERVICE.

Maria Alvis Mallette,
George M. Harrison,
Joseph B. Towe.

AN interesting memorial service was held in Virginia Hall chapel on the evening of Sunday, August 1st, at which, by request, the following papers were read. Gen. Marshall opened the meeting with prayers, etc. from the Episcopal Service, and then spoke with much feeling of the three graduates, in remembrance of whom the school was gathered together. He said, speaking with authority, that the school record of all had been excellent, and that since their graduation, they had been, each one, an honor to the Institution which had so large a share in both their moral and intellectual training. He mentioned especially Mr. Towe's value to the school as a trusted agent in the North, and spoke of his admirable graduation essay on Old Time Music—an essay which he himself most unwillingly wrote and delivered, being quite unconscious of its great merit. Of this, Gen. Marshall said, "He had his whole audience with him as soon as he named his subject, and when he gave his first illustration in his inimitable, magnetic tones, and the school choir took up the chorus, the audience was electrified and his whole essay was triumphantly received and sought for by several reporters." At the close of Gen. Marshall's remarks the three following letters were read by their writers, and the service ended with Mr. Towe's favorite hymn—"Great Camp Meeting in the Promised Land."

From the short notice given of this meeting, I had time to prepare but a few words on the lives and deaths of our departed friends.

What changes take place in a few years! The occasion which calls us together is one to which I am scarcely equal. When in the Fall of 1872, I met Jos. B. Towe, and Maria Alvis Malletta, with the rest of the singers preparing for the concerts which were afterwards given in the Eastern, Middle and Western States, for the purpose of erecting the building in which we are now assembled, I did not think that I should be called upon so soon, to speak of them after their decease, in this Hall. From the multitude of thoughts that rush upon me, consequent upon our association as singers and students, I feel that I am not equal to it.

As I before said, I met our two deceased friends here in the fall of '73. After being with them practising, about 3½ months we started on our mission the 13th day of Feby., '73. You will not expect me to say that all was sunshine; but amid all the trial and vexations incident to the life of a traveling troupe we found our two friends nobly bearing their shares of the burdens. Mr. Towe might often be seen when any of the members of the company felt a little homesick or low-spirited, trying to cheer them up by some kind words or deeds; while Miss Mallette, with her bright, cheery ways was ever ready to provoke a pleasant smile. Thus, ever through wet and dry, hot and cold, none showed more willingness to do their part than those whose faces we shall see no more.

Mr. Towe was a member of the Buta St. Baptist church of Norfolk, and Miss Mallette of the Episcopal church, Wilmingtnn, N. C. Both were useful members of their respective communities, had been successful teachers of public schools, and will be greatly missed by many pupils and friends. Their places will be hard to fill, as another has said. They were popular members of the "Hampton Student Singers," and I may well add, of society since leaving school. In a letter received from Miss Mallette last Spring, she spoke of how she was enjoying the work of school teaching, and her mind seemed to be made up to devote the rest of her life to the work of elevating her race. Noble sentiment! would that her mantle would fall upon many of our young women. Her letter was full of life and the news of her death was received with a shock. My class-mate, is it possible that so soon thou hast left thine earthly house and thy face we shall never see again.

And now since those voices which once charmed the ears of thousands in more than three hundred concerts, are forever silent to us, may we not hope that a loving Father who gave them being and such sweet voices, has called them from labor to reward; to join that heavenly chorus whose grand harmony rolls over the golden streets of that eternal city whose builder and maker is God.

R. H. H.

So far the death rate of the class of '75 has kept pace with the years. Five years have passed since the class graduated, and five of its members have passed away. First was John W. Collins, probably the most mature mind that ever left this Institution, then Mrs. Weaver and D. Y. Turner, and now J. B. Towe and Geo. M. Harrison.

I best knew Mr. Harrison as a janitor here, he and I being janitors together for three years, working out our expenses in that way. As a scholar he was not bright in everything, but earnest in all his studies. In mathematics he was excellent. In some respects he was a model scholar. In all the records of the Institution I don't think there could be found any thing against the character of Geo. M. Harrison. No teacher I suppose, ever thought of marking him in deportment or promptness. He was not one of the shirky kind, wherever his duty called he was always to be found. He cared little for games and social entertainments and seldom attended them. I think no one ever saw him spend ten minutes in foolish or idle talk. He came here for an education, and he thoroughly devoted himself to his books. All his actions were characterized by a deep sense of honesty; he scorned all ideas of dishonesty in work or study. He had no taste for mere outward show. His highest ambition was to fit himself to do his people good; he often talked of the good that he hoped to do when he lef here. The report that we hear from his field of labor justify us in saying that he carried out his ambition so far as he was able.

From his short life we may all glean a lesson, always remembering that "We live in deeds not in years. * * * He most lives who thinks most, feels noblest, acts best." We all should so shape our lives that when we shall have passed away it can be said of us as we can truly say of him, "He hath done what he could."

B. T. W.

I first saw Miss Mallatta in December, 1874, on her return from a tour through the North with the first band of Hampton Singers. She joined the Junior class, of which I was then a member. From that time till she graduated, in '77, we were in the same class, and during the Middle and Senior years, in the same section. As a scholar, she had no superior in the class among the girls. She was quick to take in ideas, always ready to express what she knew of questions that came up in the class-room. She possessed a great deal of what the girls usually lack to make them the equals of the boys—self-reliance, confidence in their own ability. She graduated with honors, delivering the salutatory, and receiving the second prize of ten dollars for excellence in essay and declamation.

She will be best remembered by the school, perhaps, as a singer, and as a member of the choir which raised money to build Virginia Hall. She was gifted with a sweet, attractive alto voice, and a disposition as lovely and agreeable as her voice. These qualities, together with her personal beauty, made her the favorite of the class and of the school. Yet she was perfectly free from affectation, and delighted most in that which was simple, plain and natural.

W. M. R.

We are glad to be able to add to the above such communications as the following, for Hampton is justly proud of her share in the production of lives which, though so soon cut short, have yet had so wide an influence for good.

"Journal of Industry" of Raleigh N. C.

THE DEATH OF MISS MARIA MALLETTE.

It is with pain that we are forced to chronicle the death of Miss Maria Mallette, of Wilmington, N. C., one of the brightest stars which adorned the social firmament of our metropolis. After a short illness, she departed this life on Sunday morning last, between the hours of 1 and 2 o'clock, and was buried on Monday last at 10 a. m., from St. Mark's Episcopal Church, of which she was a consistent member. She was a graduate of Hampton Normal School and to her is due a large share of the credit derived by the success which attended this Institution in its earlier days. She was one of the favorite members of the troupe of singers which succeeded in raising thousands of dollars for that school. By this unselfish sacrifice of both time and talent, for the benefit of her people, she placed them under an everlasting debt of gratitude to her; for which act alone, her precious memory deserves a monument, that coming generations may see that she was one of the faithful pioneers in the work of providing means for christianizing and civilizing the race with which she was identified. But it is not for this good work and deed alone, that she is distinguished. At the close of this mission, she began to teach in District School, No. 1, of her native city, and continued until her death, a little before which sad occurrence, she had just been re-elected to this post. In the school-room, church, choir, lyceum, the social circle and every department of life in which her presence could be found, can now be seen the delicate traces of her remarkable influence. Her cultured, refined and chaste manners, won for her an enviable place in the estimation, not only of her immediate friends, but all who knew her. This painful intelligences will carry sorrow to the hearts of all who had the pleasure of her acquaintance.

"In her death a star's gone down,
"To rise upon some fairer shore,
"And bright in Heaven's jeweled crown:
"To shine forever more."

WILMINGTON, N. C., *Aug.* 4, 1880.

Gen. Marshall—

Dear friend: Maria has been an energetic Christian worker ever since she left Hampton, in the day school, Sunday School, church, and church choir. Her daily walk was such, that any one might feel proud to be led by her. Her last days I think were purely Christian and Heaven-like; she died a perfect Christian. Many hearts were touched by tha beautiful death she died, and tha lovely testimony she left behind, of her going to rest. She died perfectly conscious, being reconciled to death and having known she was going to die from tha time she was taken sick. She was not well for about five weeks before she took her bed, but we thought nothing serious. She was had sick two weeks. I only wish that I could relate the lovely story told in her dying hour. It was lovely, and surely we can't help being benefited by it. She told her mother that "the moon would be shining bright the time of her death, and that as soon as she was dead that God would send a shower of rain to let them know that she was washed whiter than snow." As soon as she was dead, the rain came. Her place in my heart can never be filled. She was a sister and a dear friend to me. It seems that I can never give her up, and then on the other hand, I know that God is just in all his dealings.

Very resp'y, yours,
LUCY LEARY ROBINSON.

NEW ENGLAND CONSERVATORY,
MUSIC HALL, BOSTO, *Aug.* 3, 1880.

Dear Gen. Marshall: You ask for somn iaformation respecting J. B. Towe, while with the "Hampton Students." He was an earnest and faithful worker with the company, sad in no small degree contributed to their success in establishing a fine reputation. He was many sided is his musical nature. He bed not a fine voice; very little music in it, in fact, but it was in the man himself. There was no conventionality about his singing. The matter was real to him and he sang as if for the first time the thoughts had come to him and he was at a white heat until he could tell them out. At other times it was full of pathos. I shall never forget his readering of the song "You hear de Lambs a-crying;" it was as if his singing was full of tears dropping from every word he uttered. He could improvise pretty well and has often set the audience in a roar at some happy hit concerning town or people with whom we chanced to be at the time. I well recollect the volley of laughter that followed nn allusion to Boss Tweed one evening is Steinway Hall. But it was in such pieces as called for a declamatory power and dramatic fervor that he was to be seen at his best. There were times when he seemed to be looking into futurity and describing what was actually taking place before his eyes. With what thrilling effect I have hear-l him render the song "Yonder comes my Jesus," such recitations I do not ever expect to hear again. Ila was a man of fine sensibilities but sensitive to the last degree, and this caused his way to lie frequently among rocks, shoals and quicksands. I think he was something of a genius. There was more of him than he knew of, more than he could well mnnage.

Poor fellow, may he rest in peace, till that "Great Gittin'-up Morain'," then may he "Sing and Never Tire," in that "Great Camp Meeting in the Promised Land."

Very truly,
THOS. K. FENNER.

DR. TANNER'S FAST, AND SOME LESSONS IT TEAOHES.

A Minnesota doctor, nnmed Tanacr, hes just completed ia New York City, n self-imposed task of the most desperate nature. Without promise of reward, and the almost certainty of life-long dyspepsin, he went without food for forty days, and at last accounts was still is the land of the living. This fast, if it be accepted as fact, may benefit the human race indirectly, by causing a greater number of scientific people to devote more special nttention to the relation between food and existence. Beyond this possible, and certsinly remote benefit to mankind, it is difficult to see where the good of the exhibition came in. We all knew beforehsnd, that if any being be kept long eaough without food or water, aforesaid being will die. Dr. Tsaner did not die, so his experiment wns not a success in proving a commonly accepted theory. This objection is naturally answered by saying he did not fast long enough; but eves supposing he hnd fasted forty weeks instead of forty days, it would only have been proved that he could perform the feet—while it would not have afforded a scintilla of evidence that snybody else could do it. Whether it wers wino or foolish in Dr. Tanner, for the sske of a little notoriety, to so maltreat the very excellent stomech with which nature seems to heve provided him, is not the object of this paper—but rather to say a few worde on ths advastages of moderation in all things.

The age in which we live is a radical nge in religion, politics, finance, philosophy and what not, the contest seems to be, to find out who will go farthest. The spirit of extremes is fairly in the air, and isscasibly we all sbsorb more or less of it. The truer this statement is, the wider is the great middle ground of moderstion, for its happy occupante.

Is all depsrtments of life there must be leaders and led. In every generation are mea to he fouad who live either a generntion nhead or behiad their time. All cussot be lenders, sad the mas who lives abreast of his own age does better sad is happier thna he who is n century beforo or behiad his fellow mea. If as nrmy could be made up of all geaernls or all privats soldiers, it would be a negstive force is either event. The great mass of meakiad must coatent themselves with doieg pretty much as their neighbors do, except they voluatarily devote themselves to heroism, A hero is one who succeeds in doing some remarkable thing: if the sama purty fail is his attempt, he is sot called a hero, but gives a far less flattering title. The happiness of mediocrity is somethisg seldom sung nowadays by poets, nor is it praised by philosophers. The higher the position a msa occupies, socially, politicnlly, or fisaacially, the greater the burdens he has to beer—the keeaer his sufferiaga, and the less his pleasures. One accustomed to eat the finest food and drink the fiaest wiaes too often fiads the greatest delicacy pall upon his palate, and envies the appetits with which some poor wretch devours a stals crast. The twinges of gout of the gourmand are fully an offset to the pangs of hunger suffered by the tramp; aad the mea who have the highest enjoymeat of the table nre neither those who stuff like Lucullus nor fast like Tanner, but who use in moderstion the good things within their reach.

In political life, it is the moderate men who reach the high positions, where they can be classed as Statesmen—extremists never rise beyond being mere paltry partizans. What position does history give to public men who believe that all the virtue, valor and wisdom of their country is centered or contsined is some sections a few miles or hundred miles square? In so vast a country as the United Stutes, moderstion must msrk all who rise to be statesmen, because from the very vastaess of the territory everyoac must prefer some special section, its climate, its people, their habits, etc. While these preferences exist and must exist, there is no reason why a public man should hate all other sections simply because ha loves his owa. In politics, then, so far as we sre interested, directly or indirectly, let us seek to be moderate, and leave extreme views nnd actions to the petty politicians who eannot see outside their own state or perhaps not outside their own county.

That the majority of men fail in what they undertake is lamentable true, and the cause of nine-tentbs of the failures is the lack of moderation. Men grnsp the possibility of certain things, but overlooking the power of the personal fastor, press on, energetically perhaps, to failure. Because ona man has done or can do a certain thing, it by no means follows that another can. Hart, the pedestrian, walked or ran over 500 miles in six days; does it follow that you or I can do it? In considering any proposed action, we should not start with the general question, Can it be done? but by the particulur inquiry, Can we do it? I know this doctrine will sound strangely to many accustomed to hear the loud-voiced orators who go about declaring thet what one man can do or has done, snother can do, if they will only try. Their theory is one of the fallacies growing out of that greatest of all fallacies, viz., that all men are equnl. The inequality of men is as much part of the Divine plan as the force of gravity, and ons will leave the world about as soon as the other. If all men were equal in all respects, stagnntion would be the condition of society, and such a theory as a politicnl structure be an impossibility. If every man in the United States tried to be President, politics would be the only business of the country, and revolution the chronic state.

Egoism or selfishness is of necessity a part of each one of us, and it leads us into many blunders by mistuking the size of difficulties thnt lie in our way. We can see clearly enough when somebody else is trying to lift too grent n weight, or swim too wide a river; but when we use our eyes within, and look at eimilur difficultes we are nttempting to overcome ourselves, the weight nlways seems smaller nnd the river narrower. The great majority of us overestimnte our owa abilities, and the miscalculations between the power we possess and the power requisite to dn something we want to do, lie at the root of most failures.

Altogether too many men illustrete in their lives the story of the baby who cried because it could aot have the moon for a plnything. These men waste existence in ettempting the impossible. Thousands of young men, and old ones too for that sistter, dazzled by the fortunes won in Wall street by Vanderbilt, Gould, Keene, &c., have thought they could do the same, and huve lost their all is their vain attempt. It is said of the country lads who seek their fortunes is great cities, that not over ten per cent. are even in independent positions twenty-five yenrs nfter their arrival. To what does all this point? Is it not that the "Golden Mean" eung by the old Greek, Theocritus, is as much a thing to be desired now as whea Minerva was the patron deity of Athens?

T. T. B.

THE ERUPTION OF MT. ETNA.

THE volcano of Etna, in the Island of Sicily, of which we herewith give an illustration, is nearly 11,000 feet is height, and although by no means so constantly active as Vesuvius, has yet had no less than fifteen eruptions during the present century. But neither Vesuvius nor Etan are as high or in many respects as terribly grand as the volcano of Mauna Loa in Hawaii, of which General Armstrong gives us this month such an interesting description. We feel that we are fortunata in being able to accompany that description with so good an illustration of volcanic fire and fury as is the "Eruption of Mt. Etna," and trust that our readers will derive instruction and enjoyment from both letter and picture.

THE NEGRO, ON THE STATUS AND EXODUS OF THE NEGRO.

The American Missionary Mngazine for June contains the following interesting review which we quote in full.

It is significant that the leading article in the current aumber of the *South Atlantic*, the *elite* literary magazine of the South, is by a colored man. His topic is, "The Status of the Negro, and the Exodus." It is sble end feir in its treetmeat of the subject. The editor discleims responsibility for its statemeats, and slightly apologises for its publication; would have been glad, had it not seemed unfair to the writer, to modify a few paragraphs; but has given a Negro full leave to tell his white readers just what he thinks of Negro status and exodus. This fact is one which should not be forgotten.

On the other hand, it would be well for as to hear just what as intelligeat Negro has to say on this topic. The writer, Rev. D. J. Sanders, indicates the difficulties in the way of his people's progress; nbstacles throwa in the way both by his friends and his enemies; asserts that because of what *he is*, the Negro has made commendable progress in spite of these hindrances, aided by missionary preachers and teachers who paid but little attention to, and took no part in, the political events which were transpiring about them. Evidently, in his estimation, the improved condition of his people has not been due to political action, but to schools and morsl influences.

He asserts that the Exodus has aot been brought about by politicul causes, though a certain class of politicians have done something to spread the movement; nor is it due to the fact that educational or religious privileges have been withheld, for, strictly, it cannot he asserted that such has been the case. Persons who were pronounced in their opposition to Negro schools are, when this movement begins, laboring side by side with those who have devoted themselves to Negro education. Whatever of politics, or education, or religion may enter into the movement is merely incidental.

Political abuse there has been, but the Exodus movemeat began after this had for the most part ceased, and has raged most where this abuse has been least known, as near the home of the writer, in North Carolina.

There have been, and are now is some States, unjust laws regulating labor and wages. The scrip system, which permits the employer to pay the laborer in scrip redeemable at his store, has been known, and is ruinously unjust to the laborer, but in the two States where this movement has been greatest, repulative legislation has been in the one exactly the reverse of what it is in the other. In Mississippi the landlord must fulfil his engagements before he can force his tenaat to quit. In North Carolina the tenant must fulfil his before he can leave.

Fundamentnlly, it is the impoverished condition of the laborer, conjoined with reetlessness, and supplemented by idle curiosity, making chenge easy nnd desirable, which has exposed these poor people to the designs of unscrupulous sharpers and demngogues. They have inherited poverty, igaorance, improvidence, to esy nothing of positive vices. They have been hindered by positive efforts to keep them in ignorance. They have been discouraged by the fect that success would give them no social or political advantage, aad so they have either refused to labor, or have squandered in pic-nics and cake-walks, for tobacco and whisky, it is estimnted, nbout eighty millions of dollers nnaually.

There have been, so fnr, about 28,000 of these *exodusters* who have paid as sverage of about $10.05 to the railroad companies for trensportatioa. Out of this the companies have paid to the unscrupulous agents who promote the movement, one dollnr for full, and fifty-cents for half fares.

The roads have received about $500,000 from these people, and hope for at least half as much more from a return movement. The emigrants have received in charity about seven cents each, as as offset to the $18.65 which they have paid for trasportation alone. We know aot what report the Senate Exodus Committee will make, but are confident that it will come no nearer the truth in regard to this movement than the writer of this article. So long as the Negro is thus ignorant he will be helpless agaiast the oppressor, whether he be the old master or ths preteaded new friead. Whea we know the possibilities yet nadeveloped is the Negro, and give full scope to them, we shall know also what an element of wealth and strength there is in what is now known as an incubus on prosperity and a measce to our aational life.

WE extract the following account of fishing in Chesapenke Bny, from the letter of one of our students who is passing the summer in the York Spit Lighthouse.

"When the day is calm and clear, the keepers sajoy themselves is catching the celebrated fish known as the "bonito." These fish, during calm days, come to the surface af the water and propel themselves, at leisure, the back fin making a ripple which can be seen about one hundred and fifty yards distant. To catch n bonito, twa men are required in one boat, one to scull and one to stand forward with his harpoon, ready at any time to strike. When a bonito or the ripple of one is seen, the harpoon man gives the order to go for him, giving his directions in a low voice while the scull man puts out all his power in propelling the boat. Thus they approach very carefully, until they are within five or six yards of the bonito, when the scull man says, "Give it to him," and the harpoon man lets fly the gig, which is rigged so that if it hits the fish, the handle separates from the gig as soon as the fish begins to run. The lines are generally a hundred and seventy feet long, and a buoy is made fast to one end in case the fish should run so far as to take up all the line. In order not to let him pull the gig out, the buoy is thrown overboard and the fish is allowed to tow it until he wears himself down. Then the buoy is caught and the line hauled in until the fish comes in sight, when the second harpoon is driven into him, as near the head as possible and he quickly gives up and is hauled aboard. These fish are from two to five feet long, and make an excellent dish, as do the sheepshead and porgie, which are caught in the same manner that the bonito is except that no boats are used, for they come close enough to the piles on which the light house is built, to be harpooned by any one standing on the paralled braces. The sheepshead is quite a crafty fish, for if you were to throw your harpoon at and should not hit him, you'll likely not see him again that day. The porgie is not quite so cautious, you may sometimes strike at one and miss him, when he will turn and follow the gig near the surface of the water, in which case an expert striker might again grab his gig handle and again strike at the fish and secure him. In this particular the porgie is quite different from other fish, for as a general thing when fish see anything in the water which they they can't account for, they will flee from it, but the porgie will come to it and manifest the greatest anxiety to learn what it is. We often catch one, tie a line and sinker to him, and fish him to, or near the bottom; when he is drawn up, quite a number of other porgies follow him, apparently to discover the true condition of their companion. While they are peering about him, the harpoon man soon has one of them, and this process may be kept up for hours. An incident occurred here the other day which may be surprising to any readers. While catching porgies in the way described, the men were called to dinner, and went in, leaving a porgie swinging just on the edge of the water. Soon the first assistant gave the alarm that our fish with the heavy oarlock tied to him was gone. The principal keeper, who is an old fisherman, at once concluded that the line had been cut by a shark, and told us that he would show him a trick, at the same time giving the order to tie on another porgie. This was done, and in a few minutes after the fish was let down into the water, a shark about seven feet long made his appearance, and dashing at the porgie, was met by a solid blow from the keeper, who was on the braces with his harpoon. The first assistant came forward quickly and dealt the shark another blow, at which he surrendered and was captured. A rope was made fast to him and he was hoitsed aboard the house, when he was cut open and the oarlock taken out of him.

"A. A. SELDON."

ANOTHER DIVIDEND FROM THE FREEDMAN'S SAVINGS BANK.

The depositors in the Old Freedmen's Savings and Trust Company will be glad to see by the notice from the Home Savings Bank in another column that another dividend is now payable.

DIED.—At Hampton Institute, Va., June 28, 1880, of consumption, Ecorruptaha, (Mandna Indian, of Fort Berthold Agency, Dakota Territory), aged 20 years. His name, as given by the missionary at the Agency, should have been spelled "Ikadeptuha").

From the time of his arrival at the Institute, Ecorruptahn's conduct had been that of the quiet, cnreful, earnest student and worker. None of his teechers or those under whose direction he labored, had ever occasion to reprove or censure him, and among his fellow students of both races he was a favorite. Most of his working time was spent about the different steam engines on the place, as he seemed to like this employment, and it was thought that such knowledge as he would gain there would be of special value to him, and his race, on his return to it. But the Great Spirit had otherwise decreed. During the spring his health declined rapidly, but it was thought for some time that relaxation might bring improvemeat, and it was only when too weak to bear the removal, that any opportunity offered to send him to his home. But there was no repining. At his request he was baptized by Rev. Mr. Deanison, Chaplain of the Institute, on the evening of May 3d, and from that time, even more than before, he seemed at peace. Once, looking from the window of his room toward the cemetery, he said to those about him. "I go here, and (poiating upward) there, one day," and thus, ready, as we trust, for the change, he heeded the call of the Great Reaper and quietly, as if going to sleep, passed into the presence of him who knows no race or color but made of one blood all nations of men.

LETTERS FROM HAMPTON GRADUATE TEACHERS.

ANOTHER LETTER FROM AFRICA. BELIEVES IN FOUNDATION WORK AND SELF-HELP. OUT IN THE BIG WOODS. NEAR ENOUGH TO AFRICA. A CENT WORTH A HUNDRED. THE SHADY SIDE. COLORED TEACHERS FOR COLORED CHILDREN. APPRECIATION OF HAMPTON GRADUATE TEACHERS. HIS BEST LICKS.

We are happy to say that the charms, etc., mentioned in the following letter have been received in good order, and will doubtless be objects of interest in the new school museum. We are much indebted to Mr. White for his kindness, and trust that his friends and fellow-students will not forget him in his lonely work.

MENDI MISSION, SHERBRO IS., W. C. A., } *May* 22, 1880. }

Dear General:—

I wrote you some time ago, and promised to send you some of the country charms. I send you by this mail two, which I hope you will receive in due time. The bead-like things are used by the Mooromen to tell whether your luck is good or bad. He counts them, and if they come out even your luck is good; if odd, you are sure to have some bad luck, and that right soon, unless you pay him a large sum of money, eight or ten shillings (which is $1.92 or $2.40), to make you a charm for you to wear, like the other which I send. This will keep away all bad luck and all sickness. The man whom I got it of told me that while I kept it about my bed, or about my body, I would never be sick or have any bad thing happen to me. Although I am running a great risk to send it away, *i. e.*, if his statement is true, I send it to you, hoping that it may have the same power on you as I was promised that it would have on me. I must say, though, it has altogether failed on me, for I have been sick and have suffered many losses since I have had this "Sabar" near me. I don't mean to say that it has done me any harm; but I do mean to say that it has done me no good. Yet the maker said it would be sure to do what he said it would.

I am, dear General, your pupil,

A. E. WHITE.

FOUNDATION WORK.

A young man who has had several years' experience in teaching, and is now at the head of a large school, writes thus sensibly of his work, and ambition, to a kind friend:

Dear Friend:—

My present work here consists chiefly in laying a good foundation. There is great need and room for better foundation work. Daily experience reveals the fact that the foundation is not good. Many teachers make a great mistake in teaching and trusting the young mind as they would that approaching maturity. Hence, they err; their strength is spent, and the seed falls to the ground instead of taking root in the child's mind. I introduced the use of the "Monroe Primer" in my school this week. The children relish it, and their teacher says that is a great auxiliary in the progress of the children and also a material aid to him in getting through with his classes. The Superintendent told the school yesterday that those that did not get their books, after a few days' indulgence would have to stop. I am certain that many could do better than they do in supplying themselves with the necessary books. Parents are neglectful; they need stirring up. To give some of them books would be feeding or humoring a habit that would not work to their good. The merit cards have astonishing influence in drawing out my Sunday-school scholars. Since the first were given there is a full class and interest.

The Superintendent says that the colored schools are doing more satisfactorily than the white schools in their county. A Normal Institute will be held in Lynchburg six weeks during the summer for all the colored teachers in the "Old Dominion." I hope to be there that I may add a ring. It will begin about the middle of July. I hope Hampton may be largely and intelligently represented. An Institute of the kind will be a great help to teachers, especially those that know something and want to learn more. If possible, I want to build in the spring. At my home there is a little talk of my school lasting longer than five months. I may know it for certainty soon. My third month closed on the 16th inst. with an average of 199.85; enrollment for the present month is 295; have over 250 present some days. By the aid of the globe I hope to make the two motions of the earth plain to my geography classes.

My health is good and I hope yours is the same.

Very gratefully yours, H.

NEAR ENOUGH TO AFRICA.

A young woman writes the following bright and graphic account of her varied experience to a friend, who kindly sends it to us:

VA.

My dear Miss L——:—

My B—— school closed the 6th of this month. I had an examination in the day and an exhibition at night; that is, the children entertained the people with singing, speaking, poetry, prose, dialogues, and a few corresponding tableau scenes. Both were largely attended, and the people manifested much delight in them, as they could not help doing, for the children did splendidly. I knew you would have been much affected, could you have looked in my school-room the day I closed; out of eighty odd scholars there was scarcely a dry eye in the house. Some of them cried as if they were leaving their mothers. Nearly all of them gave me a little present. One little boy gave me *one cent*, and said he was ashamed to offer it, but it was all he had.

This place is six miles from B. I haven't many scholars yet, but expect a good number Monday morning. They have had schools down here, but it has been nearly two years ago. The people are grievously ignorant, and also poor. I never want to be any nearer Africa than I am now. I can now say and realize "The harvest is great and the laborers few." I feel that I have a broader field and more work than ever before, and, by the help of God, "Do more than ever" shall be my motto. I am right out in the big woods, where there is nothing to interest me but my work; but I am satisfied to stay here, for the Bible says, "They that are whole need no physician," and I am sure these people need me; so I am satisfied that here is work for me. Although I know that my strength is small, I know I am trusting in One who is able and will crown my efforts with success. I hope you will pray that He may strengthen me. I expect to teach five months down here.

Please let me hear from you when convenient. With warmest love, I am yours, J.

THE SHADY SIDE.

It is very difficult to keep a just idea of the state of things among the freedmen One is easily too much elated or too much depressed. There is, doubtless, great cause for encouragement in earnest work, but there is a vast amount of ignorance and poverty in the country and many dark corners. From one of them, a graduate teacher, naturally of a buoyant and cheerful disposition, writes:

VA., *March* 9, 1880.

Dear General:—

I am teaching a second school, which began on the 1st. I cannot say that I like this place at all, as it is one of the most destitute in the State. Fifteen years of freedom, with only a few exceptions, seem to have wrought no good, but indolence and neglect. They are wholly indifferent as to their own welfare and that of their children. The children seem anxious to learn, as some of them come three to five miles barefoot to school, and seem to endure the cold with a fortitude unknown to me. I requested the people three weeks ago to repair the school-room, which is the worst in the district, but they will not, so I shall have to do it myself. I bought the glass for the window yesterday.

You will please remember my application for two boys to come to Hampton. Have not been able to get a single subscriber to the WORKMAN, as literature with the unintelligent is so much "trash."

Let me hear from you soon, please.

Yours, with respect, B.

COLORED TEACHERS FOR COLORED CHILDREN.

Hampton has a few graduate teachers in Maryland. One of them writes as follows:

MD., *May* 17, 1880.

Dear Mr. B., My kind friend:—

Accept the thanks of a grateful community for your exceeding great kindness. I think my school is on the progressive. We received a visit from Mr. ——, the examiner, on one day of the present month. He expressed himself as highly pleased with the progress of my school. He has great faith in the ability of Hampton graduates as teachers of colored schools, which until recently were taught by whites. It is an undoubted fact that colored children make more rapid improvement under conscientious teachers of the same race than under white instructors. Mr. —— is cognizant of this and seeks to employ such teachers. The attendance at school this spring has been very meagre, the children having to remain at home to assist their parents on the farm.

With sincere wishes that you enjoy health and prosperity,

I am yours very gratefully, L.

——, MD. *April 5th* 1880.

Gen. S. C. Armstrong:

Dear Sir:—By my reading you will see that I am still at my old post, and still putting in my "best licks" for the welfare of and upbuilding of the race with which I am identified. I know that these "licks" are feeble compared with those of others, but I have the satisfaction of knowing that I am doing my best, or trying to, and that is all that is required.

My school kept up very well all winter, but is falling off in attendance a little at present, as the busy season is opening. The pupils have made as good progress as I could wish, and passed very creditably, a rigid written examination a few weeks ago. I am told by the examiner that nearly all the colored schools compared, very favorably with the whites in this country, and it is a fact of which we, the teachers who are nearly all Virginians, may be just a trifle proud.

The whites are principally of German and Dutch origin and mostly Republicans in politics. They are intelligent and liberal minded and seem to be willing to give their colored friends a chance for themselves if they will improve it. Among them I have made some very warm friends during the two years that I have been here.

I have tried to influence some of the parents here to send their children to Hampton, believing that the Hampton system would be the making of them, but they prefer Storer College as it is nearer. A few are waking up to the importance of giving their children a good education, and are willing to make a sacrifice for that purpose. Two of my most advanced scholars are preparing to enter Storer, next fall, and one, perhaps the succeeding fall. I can never thank you sufficiently for the "SOUTHERN WORKMAN," and the "EDUCATIONAL JOURNAL" of Va., both of which I have received regularly since I have been teaching and have always found them invaluable aids in my work. I subscribed for the "Md. *Journal*" last year. This year I have taken the Williamsport *Pilot* and the *People's Advocate*, and cannot but feel grateful to be so well supplied with reading matter.

Please present my respects to Miss M. and Miss L. Respectfully yours, W.

SCHOLARSHIP LETTERS.

[Written yearly by every student at Hampton to the friends whose contributions of $70 a year meet the estimated expense of a student's schooling, irrespective of board and personal expenses, which are paid by the student himself, partly in work.]

FROM A JUNIOR.

The modest beginning of this letter is not a bad preparation for its very brave close. This, like all the scholarship letters published in the WORKMAN, is given without correction.

Dear Friend:—

I am requested by General Armstrong to write this letter but I feel my deficiency so much that I hate to commence it. I am a boy seventeen years of age. My home is in Mecklenburg county, Virginia. My father's parents were free people but they died when he was very small. He was bound to the same man my mother belonged to until he was one and twenty years of age. He was a wagon boy from the time he went to Mr W.'s till he was large enough to drive horses himself. He was a wagoner till Lee surrendered and then as he had no team of his own to haul or farm with he was obliged to work with other men. I was his oldest son and as I was too small to work he had it all to do himself. As soon as I was large enough I went to work with him but as wages were very low we got little pay. When the Free School commenced in our neighborhood I could not go. I went to the exhibition when the first term ended. I enjoyed the exhibition very much and wanted to go to school very badly myself. My father told me that he was going to let me go the next year. He let me go but I could not go but two weeks. The next year I didn't go any. The fourth year I went two months and my father said that he was going to continue to let me go two months but as he was unable to do his being sick some winters would prevent my going, but as I had already learned some I could study each night and learn more alone. I continued so until last year I decided to come here. The number of months that I went to school before I came here is fifteen. I came here the first of October and entered the Junior class. I like this place splendidly but I am afraid I will not be able to stay here until I can graduate but can only try as I do every other thing that seems impossible. I am under many obligations to you for paying my tuition. I dont feel as if I can thank you enough.

Yours respectfully, B.

EFFORTS FOR AN EDUCATION

Another Junior thus describes his efforts to secure an education. Most of those who come to Hampton could tell of similar experiences.

My chances for school has been poor. When I did go it was for such short time that I did not advance fast. I have always liked to study, and desired to go to school, especially to some high school. When I arrived at the age of sixteen, my mother said that she desired that I should go to some school, that she did not have the means to send me, that I might go and accumulate all that I could honestly get; and go to school in order to educate myself. After leaving my mother, I went to live with a lawyer, and lived with him nearly two years, and when I told him that I wanted to leave, he said he liked me very much and desired that I should stay longer. When I told him my reason, he said he did not want to keep anyone from school though I might stay longer. Finding myself unready to go to school I applied to the Board of Examiners for a school and after being examined was awarded a third grade. I succeeded in getting a school about twenty miles above home. I taught four months, and got home by the first of June. The Patrons of the school desired that I should come and take charge again and teach two months, July and August. I accepted the offer and began school the first of July and closed by the first of September. I closed school with an examination and the people of the neighborhood gave a nice entertaining dinner. I went home in September and remained there till I came here.

My parents were free, and hence I was not a slave as most of the colored people were, but the chances of those who were free was but a small degree better than those who were slaves. I have lived in South Carolina since my birth, and can say the colored people of that section, though very ignorant is becoming more and more aroused upon the subject of education; and it will be my object here or at my other Institution, to acquire all the information that I can in order to teach them.

I am yours respectfully, W.

FROM A MIDDLER.

A young woman in the Middle class writes thus of her life.

Dear Friend:

My mother is a native of North Carolina, but was hired to a doctor in Va. in her fifteenth year. In a few years after, the war came on, at which time I was four years old. We then moved to Norfolk, and there stayed three years. I went to school while here three months, or long enough to learn my letters and spell in the Green Back Primar. After this we left Norfolk and went to live in the country to a district called Western Branch, which is about ten miles from Norfolk. Here we have been for the last fourteen years. Six years of this time I was sick and could not be of any service to my mother, who was not able to do very much for me, as her income came by the labor of her hands, and was almost on invalid herself. In all this time I have not been to school. In 1879 there was a very aged gentleman who came in the neighborhood and began to teach school in an old hut which had no windows doors or chimney. This I thought was a good chance for me to learn to write. For I thought if I could write I would be great. So I went to him about a month and learned a good deal considering the circumstances. Now I had to stop school and had to go in service.

There I stayed until the March of 1874, at which time I volunteered to learn something about education if possible. There was a very good day school kept by a West Indian in the neighborhood, and to him I went five months. He then died and left me to make another attempt. In the winter of the following year a native of the same islands came and took the place of the deceased. I made another trial. And in the fall of 1875 I became an assistant teacher in the same school in which I had been a scholar before. My salary was very small indeed; but as it was such a sudden step from where I had before been standing, I was thankful and made myself contented,—because I thought it was God's providence as I had prayed so often before for a way to be opened for me. This opportunity made me think that I would like to take a step higher. So I saved what I could within three five month sessions and came to Hampton Normal School on the 8th of March 1879 and entered the middle class. When school closed I went home to see my mother and stayed a week. I then came back to Hampton and remained the whole summer. My object for coming back was to earn something to assist me this term. So I did. Some of the time was very rugged but the best of it was very pleasant. I have learned since I have been here that this place is kept up in part by private individuals. You who receive this, I hope will feel that there is *one* repaying the benefit of your gifts that feels thankful both to you and God.

Yours respectfully V.

INCIDENTS OF INDIAN LIFE AT HAMPTON.

WORK, MUSIC, NEW ARRIVALS, CARE OF SICK.

Ask the average American what he knows of the characteristics of the ancient Angles and Saxons, or the Romans, and he would not hesitate for an answer. Ask him what he knows of the real character of the American Indian, and he is confounded. To show the public that the Indian is a man, that he thinks, does wrong, does right, has a mind and hody capable of improvement, is the object of these "incidents."

VACATION.

Vacation to the Indians here does not mean a pleasant trip home, the meeting of parents and friends, or three or four months spent in idleness. To them it means work. No drones are allowed in this hive. The thirty boys who remain here are divided into three squads, who spend three weeks alternately in the country, in camp life, under the supervision of a teacher. This plan was tried last year and it works well. Two squads have already returned in an improved condition. The boys work eight hours a day, some working at their trades and the others on the farm. The wheelwrights, blacksmiths and carpenters are reported as doing exceedingly well. There is a general improvement in their work. It is seldom now that they have to be spoken to for any slackness. It is common to see five or six in a hoeing race, with the end of a beet or corn row for the goal.

SYMPATHIES.

Has the Indian any of the tender feelings? One or two examples will answer this question. Among the Indian chiefs who visited the school month before last, was an uncle of Frank Yellowbird, one of our students, whom he had not seen for two years. Their meeting was truly affecting. For five minutes they stood clasping each other's hands, unable to speak a word, and weeping as though their hearts would break, but with joy instead of sorrow.

The following notes written by some of the girls to Miss F——, one of their teachers, just before they started North, show something of their feeling towards their teachers:

"*Dear Miss F——:*—

"I never will forget you in my life, when I go home to Dakota I never will see you again, but if you are good and I am good we shall meet together in the heaven.

"SARAH WALKER."

"*Dear Miss F——:*—

"I never forget you because you my good teacher. My dear teacher please you help me pray every night. I go way to far away, when I come back here I glad to see you. I am very sorry for you to day. I hope you will see me again. I will trying hard to do right. I will keep your card. Good bye.

"JOSEPHINE MOLNOURY."

Many other such instances could be given to show that the Indian has all the feelings that any other race has. Cultivation is all that is needed.

CARE OF THE SICK.

During the late sickness of Ecorruptahah, White Breast was detailed to assist a colored student in waiting on him. It is surprising how well he performed his duty. A trained nurse would not have done better. He was almost never away from his bedside, unless made to go. If I went into his room at midnight, or early in the morning, I found White Breast near the bedside. He was unwilling to trust anyone else with the care of his patient. He seemed to anticipate his smallest wants and was always ready to administer to them. Nothing has so strengthened my confidence in the civilization of the Indians as the actions of this boy around the bed of his sick friend.

MUSIC.

The following report on their progress in music is made by Mr. Hamilton, who taught them vocal music last term:—

"While much has been said, from time to time, concerning the progress of the Indian students at Hampton in their studies, but little or nothing has been said about their study of music. In this, as in other studies, some love it, and show much aptness; others care little for it, and were it not for the calling of the roll, would never be present when the time comes for singing: in this, they are like other people. Some of the boys and girls who have attended the agency and mission schools have learned to play quite creditably on the organ and piano by note. One of the young men plays the organ in their Sabbath-school, held every Sunday by Rev. Mr. Gravatt.

"Let us now look at the singing class and see what they are doing. The roll is called, and we begin by drawing five lines, and asking, 'What is that?' A few voices answer, 'Staff,' followed very quickly by many others giving the same answer. This being made clear to all, we continue the lesson. The *G* clef is next put on the blackboard—not on the staff, as that, and they are taught the names of the lines and spaces as they are when this clef is used. It is somewhat amusing to hear them trying to say the word *clef*. Some, more persevering than others, continue to say it over until it is said correctly; while some, with a shake of the head, give it up. It is quite a study to observe the facial expressions of satisfaction or disappointment at their success or failure.

"Well, having found names for all the lines and spaces, together with the first added line below the staff, the scale of *C* is written upon the staff, ascending and descending. The syllable names are said over and over, until all are able to repeat them quite readily; then the singing commences. Having sounded the *do* and sung the scale over several times, they are required to imitate. Imagine fifty or sixty musicians with as many instruments, including all kinds, taking them, without being tuned, and attempting to play, and you will have some idea of the effect produced by these untuned voices. Nor is there much improvement with the second and third trial. And for a considerable time some will sound the 3d and 5th of the scale instead of the 1st. 'Patience and perseverance conquer all things,' it is said. After resorting to the use of various syllables used in vocalization, such as *a, e, o* and *ah*, first spoken, then sung, I succeed in getting their ears trained and voices tuned, so that the scale is sung smoothly and correctly, ascending and descending. This course is repeated nearly every time they meet for a singing lesson. Whole notes are employed in writing the scale, without saying anything about their value or time name. For some time they are drilled on the scale in this simple form, then half-notes are introduced. A teacher is at no little disadvantage in that he can do but little explaining by words. The lesson must be put on the board and then sung, requiring them to watch carefully the manner in which it is done and then to imitate. Most of them seem to enjoy this to an unusual degree, counting and beating time. But if they get to a place in an exercise that is a little difficult, while they are trying to think it out their hands will pause, the time drag, and then, if you don't push them, they will drag to the end.

"During the term considerable advancement is made. Towards the letter part of the term just past many of them could tell the names of the various characters as fast as they could be put on the board, and sing the scale and other exercises readily and in time. Taking advantage of times when the organ would not be locked, many of them have learned to play by ear such tunes as 'Martin,' 'Sweet by and by,' &c.

"They show no little fondness for the Plantation Melodies sung by the colored students, 'Hail! Hail! Hail!' 'I wonder where shall I go,' and 'Who'll join the Union?' being special favorites. And passing any of them, girls especially, a little before the hour for singing, I would be besieged on every side to sing one or all of the above pieces 'to-night at singing-school.' I taught them a verse of each piece, and they might be heard almost any time singing,—

"'Roll up, Jordan, roll up high,
Roll up, Jordan, let me by,
To ease my trouble in mind.'

"Or,—

"'Look up yonder what I see,
Bright angels coming after me;
I'm on my journey home.'

"Many of the Moody and Sankey songs were taught them by their teachers, and these we can hear ringing about the buildings, not in strict time, however. Those who were taught to read in the Dakota language before coming here are often heard singing hymns in that language to such familiar tunes as 'Arlington,' 'Autumn,' 'The Missionary Hymn,' &c.

"We sometimes get them to sing some of their war and love songs. These songs are very strange and almost indescribable, the attempt to write them being well nigh a hopeless one; though I have succeeded in taking down the words and notes of two 'love songs' and have a third nearly completed. As they become educated, they don't care to sing these songs, especially the war songs—which are accompanied by slapping the hands and stamping the feet, ending with a yell that is rather startling when heard for the first time.

"Educate the Indian and the Negro, and with the spirit shown by each at this Institution, I am willing to leave the questions as to their future to them, without any fears as to the result.

R. R. H."

HAWAIIAN MISSIONARIES.

NEW ARRIVALS.

Since our last report we have had five new arrivals—three boys and two girls, from the Winnebago and Omaha Agencies. Neither of these tribes has been represented here before. Two of the boys go at the carpenter's trade, and the other one, by his own choice, is learning engineering. The average health of the boys is not very good, but all of them seem bright and earnest, and now that the first few days of homesickness are over, they take hold as if to make the best of their time while here.

Some of the actions of the new boys, before they get initiated into the habits of civilized life, are quite amusing to the old boys, who forget that it has been but a few months since they acted in the same way. Their fun began when one little fellow, who evidently meant to begin his life at Hampton by doing his work well at the table, for that purpose, left his coat in his room.

The little fellow was the object of much admiration from the other boys, and he unconsciously furnished them much amusement during the whole meal. The older boys were particularly interested in the inspection of rooms the first two or three mornings after the arrival of the new boys. When it came to the inspection of the new boys' rooms the older boys would crowd around the door to see what strange sights could be seen—and they did not look in vain. For instance, one boy made up his bed and left both sheets and the pillow-case off; another insisted on covering his pillow with the blanket, and all would forget to sweep their floors. Things went on in this way for several mornings without improvement, and I had to turn the joke on the old boys by making them take the new boys for roommates and teach them to keep house. Now, the smoothness of their beds and the neatness of their rooms would teach a lesson to some lady housekeepers.

EVENINGS.

After eight and a-half months' hard study during school, the Indians are not pushed much in that line during vacation. Still, no time is left for weeds to grow. Many little things that tend to elevate them are artfully pushed in. Monday and Thursday evenings the boys and girls meet together in a large room for games. These meetings have a good effect upon their social natures, and help in a great degree to give the boys a more civilized opinion of the girls. Checkers, dominoes, and "words and sentences" are played with a good degree of skill; while "Clap in and clap out," "Go bang" and "Simon says thumbs up" are enjoyed to such an extent that they dislike bed time to come. But the bell rings and they must go. Before departing, all join merrily in a pleasant hymn, then come the "good nights," and all leave, benefited in more ways than one. Friday nights they have prayer-meeting, which is well attended and much interest is shown in it. Sunday nights they have a Bible story or a short talk on some other subject; this, mixed in with the singing, they like very much. At one of their meetings considerable anxiety was felt as to who should lead the singing, their teachers not being experts in that line; this anxiety was pleasantly removed when one of the boys boldly led off, followed in a good chorus by the others. The singing at most of their meetings is led by one of the boys or girls. The girls and the new boys have object lessons for an hour four days in the week.

WINS A PRIZE.

The untutored Indian is anything but a graceful walker. Take off his moccasins and put shoes on him, and he does not know how to use his feet. When the boys and girls are first brought here it is curious to see in what a bungling way they go up and down stairs, throwing their feet in all sorts of directions as if they had no control over them. In marching out of the dining-room they excel in *not* keeping step to the music. They will either take two steps while the others take one, or *vice versa*. Yet after a few months' training quite an apparent change is made. They hold themselves more erect, step firmer and more surely.

One of the chief features of an entertainment given in Virginia Hall recently, was a jumping match and a promenade, with a prize for the six most graceful couples. The Indians did not succeed very well at raising themselves three or four feet from the ground. They entered the walking match, with twenty-five or thirty other couples, with more determination. After all had gracefully moved around the room to the tune of "Grants' Grand March," came the decision of the judges, and all were surprised and gratified at the announcement that gave Mr. Alexander Peters and Miss Mary Goulet, both Indians, the fourth prize. They walked politely up to the stand and received their prize amid the cheers of the colored and Indian students.

D. T. W.

LETTERS FROM INDIAN STUDENTS.

The Indian students were all requested this year to write something like a "scholarship letter" to the friends whose bounty had applied the deficit of Government aid to them. Some wrote in English, and others who were unable or too shy to do this wrote or dictated in Dakota which was then translated. The result has been a very interesting set of letters, one or two samples of which we give, of each kind.

IN ORIGINAL ENGLISH.

The first specimen was written in English by a young man of nineteen, from Standing Rock Agency, Dakota, a Blackfeet Sioux, a half-breed with apparantly Irish blood. He did not know any English and had never been to any school before he came to Hampton. He is very diligent and has made good progress in every respect.

My Dear Fviend;

Indian boys to come here and to learn speak English and I am like to try to study every morning and every afternoon all Indian boys to going to work hard and the boys all like to work hard and Because the all boys want mony and when I work try to be like to work and I like to school very much and work I read and when I talk English and I like to speak English and the all boys and girls to learn to speak English very well and all boys and girls like to Hampton school

from your ever Dear friend
JOHN PLEATS.

A TRANSLATED LETTER.

The sister of the young man who wrote the above, prefarred to write in her own language, by dictation to a companion. She is sixteen years old, and has made very marked progress. She could have written in English, but her letter is interesting as giving freer expression to her thought than if it had been in a language foreign to her.

Dear friend:

This day I was very glad. I want to write to you. The house we stay in is very

nice. We want to learn and we all came a great way from Dakota to learn something. Now I have learned something sad I am glad. Some of the Indians at home don't try to learn anything. If they would try to learn at home, they could learn something but they don't try. Once I was an Indian girl; now I'm learning white people's way. I always try to do right. I have a mother and sisters. I left them and came way over here to learn. The house where we stay is very nice. I never get lonesome. I like to stay here and I don't tell my father and mother I am sick or anything false. I don't want to make them sorry. I always try to tell the truth. The lady who takes care of us is a nice lady. I am always happy. When I was at home, I tried to be good, but I wanted to come here to learn. I have learned something now and I am very glad. You sent us some things. I am very glad you sent them to us. I thank you very much. I can't say much this time. I wish I could. I shake hands with you this day. I don't know you, but if you will write to me, the teacher will tell me. I was very sorry when I first come here. I didn't like it, but I like it now. We have stayed here so long I don't think about my home so much. I am always happy. I am trying to learn to write good and I think about good things. I don't want to do anything bad in this place where I stay. God sees me whether I am bad or good. I pray to God when I am bad. Sometimes I am bad, but I try to be good, and I am trying to learn something. When we have learned we shall know something. I am always happy. That's all I am going to say. I shake hands with you.

ROSA PLEETS.

FORT BENNETT, D. T., *Aug.* 13, 1880.

Editor of Workman:—

It may be a matter of interest to you, as evidencing the improvement is tone and disposition of the Cheyenne River Sioux Indians and the confidence of army officers in the genuineness of same, to learn that the Indian hunting party, which has just returned from a three weeks' hunt, was given arms and ammunition by military authorities and sent out under the charge of an army officer, who was the only white man with the party. Many of the members of the party took an active part in the Custer massacre four years ago, and the officer reports that they all were obedient and cheerful during the entire trip and gave him no trouble whatever. The party was quite successful, killing 634 deer and antelope, and there is general rejoicing among the Indians. Their crops have done fairly well in spite of the long drought. New claims are being located by the Indians, and the general outlook is decidedly encouraging.

I remain, very respectfully,

Your obedient servant,

GEO. LER. BROWN,
Lt. 11th Infantry.

HAWAIIAN MISSIONARIES.

In Gen. Armstrong's letter for this month our readers will notice that he speaks of going on board the "Morning Star" to say goodby to the missionaries who were sailing for the Gilbert Islands. Among these missionaries were a native Hawaiian minister and his wife who in starting upon their perilous and self-sacrificing labors are but following in the footsteps of those noble spirits among their fellow countrymen, who from time to time, since the Christianization of Hawaii, have been moved to assist their white teachers and pastors in their attempt to establish permanent missionary stations upon various heathen and cannibal islands, lying South and West of the Hawaiian group. The native missionaries are in many respects better fitted to the work than are the whites, and in connection with the accompanying portrait group, we are very glad to be able to give a detailed account of the men and their work, taken from the "*Missionary Herald.*"

"Micronesia means the 'Little Islands.' They are a group of islands in the Pacific ocean five thousand miles South west from San Francisco. The people who inhabit them were wild and dark, both in mind and body. Some were copper-colored, some olive. Their eyes were black, their hair black and straight, and their almost naked bodies were tattooed. They believed in spirits, and set up stones in honor of them, to which they brought offerings. Most of these islands were built by the coral insect, and are low and barren, lying flat upon the sea, and having a great lagoon, or lake, in the center. On the island of Apaiang the soil is so poor that, even in that tropical climate, there are only twenty-five kinds of growing things, including every shrub and weed. Neither horses, cows, or sheep can live there long. So there is no fresh beef or mutton, and one of the first missionaries nearly starved on Apaiang. There was food, but it was not of a kind to nourish him. The *Morning Star* arrived just as he was sinking away. His wife carried on board, and fed with the milk of a cow until able to bear solid food: and so his life was saved.

"On those green rings of coral islands there are no hills or streams; few land birds and few flowers. You would see no villages. At a mission station you might find a church, a house for the missionaries, a house for strangers, a store, and five or six small native houses, and the natives call that 'city great!'

"The other islands, such as Kusaie and Ponape, are volcanic and have mountains two or three thousand feet high. They are covered with forests, and are alive with birds of bright plumage and sweet song. There are the bread-fruit, banana, cocoanut, lemon, orange, and other tropical growths, with a great variety of timber trees. But even here there are no cultivated fields or pleasant towns. The people build their little reed houses under the trees, and pull up a few reeds around them, in order to plant bananas and yams, the vines of which they train upon the trees.

"WHAT THE MISSION HAS DONE FOR THE ISLANDS.

"In 1873, at the end of twenty-six years, there were six American and thirteen Sandwich Island missionaries in Micronesia. They had reduced four of the languages to writing—for the islands have different dialects—and had translated the new Testament and many books and Christian songs. There are thirty-four churches and about fifteen hundred church-members. Many hundred of the natives can read well, and on some of the islands all the population are in school. The churches have themselves begun the work of foreign missions, and have sent ten teachers from their own number to heathen islands.

"THE PONAPE BANDS OF MISSIONS.

"At their Monthly Concerts in 1874 they contributed nearly one thousand dollars for supporting their missionaries. Most noted among these teachers are Opatiia, and his wife, Princess Opatiia. Opatiia is a simple, sincere, honest Christian, and his noble wife has long been an efficient teacher. She was born to good King Hezekiah while he was a bloody chieftain, and was one of the earlier ones, with him, to embrace Christianity. The missionaries have sent to America photographs of Opatiia and the teachers. In the picture of the group of native missionaries, Opatiia (Obadiah), the husband of the princess, sits in the center. On the right stands David, on the left is Moses of Mokil, and at his feet sits Moses of Ponape.

"In less than five years, these Ponape Christians had established seven churches with 338 communicants on the Mortlock Islands, and one church with 272 members on Pingelap. The rude, wild people support their teachers; build them houses, bring them food and do their work that they may be free to teach. Even in time of famine, when the people were starving, the teachers were not left to suffer. There are now fifteen hundred members of native churches in Micronesia."

EDITORIAL CORRESPONDENCE.

HONOLULU, OAHU, HAWAIIAN ISLANDS,
June 21, 1880.

A feature here is the Hawaiian Missionary Children's, or "Cousins'" Society, composed of the descendants of the missionaries. It numbers nearly three hundred; its members are scattered over the world, but most of them live here. It is a band of union between them, holding absent ones in a kind remembrance, reporting annually the whereabouts of those in foreign parts, and keeping all in sympathy with each other. It is religious, literary and patriotic. It helps the needy, discusses questions of the day, and develops home talent through its manuscript periodicals. I was President of it in 1858, and found the old circle extremely pleasant; the welcome to the returning wanderer is delightful.

This afternoon the *Morning Star* sailed for the Western Pacific islands with two white and one native families, missionary reinforcements to the Gilbert Islands, and a year's supply for the thirteen laborers already in the field; for those islands produce nothing that a civilized man can eat. At the farewell on board were gathered about a hundred and fifty natives and some fifty whites. Brief addresses were made by the brave men who, with their wives, had given themselves to their Master's work on remote and barren islands. They seemed the happiest people on board. Those who devote themselves wholly to doing good appear to have the best time of it in this world. While many of us are ready to work for others we must keep the flesh pots in sight. A country is made better and richer by every act of sacrifice of its people. It is stupid to say, "Let the missions do good at home," because charity begins there. Every one who goes to the heathen fills his place at home ten times over by the reaction of his example. People need examples of men who take stock in their faith. A country, like a man, gains by what it gives. "He that loses his life shall gain it" is sound common sense. The Hawaiian churches are vitalized by the men and the means they send to the savage islands to the west. Rev. Geo. L. Chaney of Boston, an Unitarian minister, on a recent visit to these islands, declared that he saw here what gave life to the American churches—missionary work—and that his own denomination needed it. Mission work pays, counting only the influence of it at home. No philosopher advocates it, because mere philosophy does not contain the secret of power; or, if it points it out, does it as an anatomist dissects, as a fact and not as a force. The civilizations of the Pacific is the result of missions of faith.

After the "Cousins'" meeting a party of us went to a genuine native feast at the house of a Hawaiian lady, who is the flower of her race, the daughter of a high chief, married to an American. Her house is very beautiful. Commanding all the resources of Kanaka art, she spread before us *poi*, varieties of fish and many island dainties cooked in the native style, by which every flavor is preserved and food is most palatable and wholesome.

Yesterday I stood in the pulpit where my father preached for over twenty years and talked to the people through the pastor who interpreted. The Hawaiians formerly looked up to the missionaries as chiefs. We, their descendants, have from the older natives a heritage of affection for our fathers' sakes, and are called by them their "*keike*" (children); the devotion of some of the old people is touching. But things have changed. They are like grown up children, kindly intentioned, but with many foolish notions, and are inclined to distrust foreigners, through whom both evil and good have come to their country.

June 23d.—My old companions being mostly settled in life, with families, had done little riding of late years, but last evening we had a grand horseback party by moonlight. Rendezvousing at "Sweet Home" in the valley, twenty well mounted couples, eight abreast, came thundering down Nuuanu street, the most beautiful avenue I ever saw, arched over in places with great tropical branches, meeting on every side, inspired, both horses and riders with the resounding echoes of our animals' feet: it was like a cavalry charge. We rode five miles to Waikiki, the Hawaiian Newport. How can I describe the scene! Cantering through the cocoanut groves whose long, graceful shadows lay on the velvety turf, we reached the beach, walked by the waves, whose lullaby soothes scores of people who have built or are building cottages at the water's edge; entered Kapiolani park and struck the mile race course at about 8 o'clock, taking two turns around it, riding ten abreast, except when the young irrepressibles would dash to the front and away. It is finely turfed, without a particle of dust. The park is at the foot of Diamond Head, an extinct volcano. The course leads close under the magnificent brow of this crater that lifts its awful face or crest like an altar for the worship of God. The ocean dashes against its base; it stands alone, a prumuntory detached from the mountains. It is circular in form, rough, rocky and steep—a symbol of grandeur. The full moon shone right over its summit, turning into shadow the side next to us. We galloped up to it, skirted the spurs that buttress it, then turned our horses' heads away, facing a range of mountains and looking into the heart of Manoa valley. Heavy black clouds frowned and threatened rain, but seemed to refrain for our sakes. Returning from the park to the cocoanut grove, we gave our prospective hostess a horseback serenade, after the old fashion, and were soon cordially received in the charming seaside cottage of the Minister of the Interior. The floor capacity of a commandious house was doubled by a verandah or *lanai* about sixty feet square, where we had games for a couple of hours, repeating our pleasures on the *Zealandia*. Directly in front was the Pacific Ocean. I stood by the waves, looking at dark old Diamond Head across a bay whose waters were turned by the reflected moonlight into a sheet of silver; on the left stood thousands of stately cocoanut trees like tall plumed knights set to guard forever a land that was not meant for all the modern improvements. It was like a fairy land. Many times others, as well as myself, have wished that our faithful Treasurer and Vice Principal at Hemptoa, General Marshall, with his wife, could revisit their home of twenty years at these islands; they would have a great ovation. I don't know how many little couples or groups, taking it easily, lingering in the moonlight—then goodnight and sweet dreams.

Last week I attended a review of a portion of the Hawaiian army, some 120 men acting as uniformed and well drilled. The King takes great interest in military matters, drills his men personally and desires, it is said, an increase of force and forts. The review was given for the benefit of the Legislature.

HAIKU PLANTATION, MAUI, *June 25th.*

In 1832, nearly fifty years ago, my parents lived on this spot, in a little thatched hut, on the bare ground, trying to lift up the heathen who swarmed on these foot-hills and slopes. After a few years of hard work these idolaters took kindly to missionary influence, gave up many cruel and low practices, and aided in building a huge stone church. Heavy timbers were brought from up the mountain side, across ravines and gulches, by volunteers, on their backs. They dove into the sea for coral to make lime and mortar. My father used to tell of the time when a gale destroyed the roof which had just been finished with great toil; how a meeting was called, and the natives, inspired by a chief, went back to the mountains for fresh timbers. To-day, the stones of that church are part of a sugar mill; the camping ground of the savage is covered with sugar-cane and dotted with charming residences. Young ladies practise archery where the savage threw his spear. These sweetly embowered cottages are connected by telephones, through which there is pleasant evening chat. A magnificent mill, costing over $200,000, is not far off; the smoke stacks of many others can be counted from the top of this house. Great patches of green cane are spread over the mountain side, and thousands of laborers are busy in the fields and mills. Hawaiians, Chinese, Japanese, Portuguese and South Sea Islanders have been scraped together, for the supply of labor is short; 5,000 more are now needed in these islands. The workmen have the advantage, and, as a class, are low, and, to some extent, demoralized. The laborer must have an advance of two or three months' wages and is liable to run away. The planter can, by law, imprison the runaway; without this law, he could do nothing. Wages average $18.00 a month, and unrestedly rising.

The Chinese are somewhat tricky: they often leave after getting their advance, and always protect each other from the law. They are shrewd, make the most money they can, and are doing a dreadful business by way of peddling bad rum, which pays better than regular work. Still, they are great producers. The Japanese are excellent, and the Portuguese do well, but are fussy about food, and bigoted Catholics. The South Sea Islanders are degraded and die off easily, but are doing something: those from low equatorial islands are poor; those from higher lands and latitudes are better. What changes in fifty years! The gradual decrease of natives from 80,000 in 1830 to 44,000 now, the proportion of males to females as nearly three to one, the great commercial stimulus by way of profits on sugar, breaking up homestead life, massing the people on plantations, weakening them individually by making them parts of a vast machine, their white friends becoming their task masters, their increasing distrust of foreigners and the loss of missionary influence over them, are facts for the friends of these islanders to ponder.

Yesterday I attended the annual exercises of the Makawao Female Seminary for Hawaiian girls. There were about forty of them, from six to twenty years of age. They were bright and pleasing; most had white blood in their veins. There is so much of brains among these people. Under Miss Carpenter's care they have learned English rapidly and improved in many ways. There were on exhibition specimens of exquisite cooking and handiwork. This is a first-rate school; private, but aided by the government. Riding up to it a veteran missionary said to me, "These girls' schools are the last hope of the Hawaiian race." The girls need watching and more in danger without it. They don't dare educate the sexes together here. I believe this is a blunder. The girls are weak when they leave school. Mingle the sexes, satisfy human nature in a reasonable way, fit them for life by living as they will have to live, and they will have more character. With co-education of the sexes at Hampton we don't have a tenth part of the trouble they have here. People become trustworthy by being trusted; they learn to swim by going into the water. They learn life's lessons in life and not out of it. The disproportion of sexes is this kingdom makes the future of these girls most critical. They are watched and hounded and approached with all the skill that many base men can command, and they are weak themselves. The only thing to do is to do more. To form men and money into powerful schools for practical Christian education for this race. Half the day for study and half for work.

I am sitting on a piazza in a beautiful garden very near where my parents once lived in a wretched hut. My host and hostess are children of my father's compatriots. He has 400 laborers of all nationalities, and two huge mills, under his care, which would, in the South, give him the rank of Colonel at least. But, out here, whatever we are or have been—foreign ambassadors, clergymen, judges of the Supreme Court, planters, merchants, or brigadier generals—we are all called by our old school names, Frank, Bill, Joe, Henry, Sam, &c.

How happy are the little ones about me running around barefoot! They have everything they want, but they don't want shoes. I was brought up barefoot, from missionary impecuniosity, but am thankful for it. The touch of mother earth is full of health. How we could climb trees, run races, swim, ride horseback on goats, donkeys and horses, explore the forest and gorge, and never were seriously hurt. The shod child is half a prisoner.

This plantation of 7,000 acres, besides 3,500 acres of woodland, lies upon the ocean, sloping in a steep bluff which falls into deep blue

water. From the bluff there is a steady ascent of eighteen miles to tha top of Haleakela (House of the Sun) over which the god of day rises,—hence the name. We are a mile from the sea cliff; my eyes command a sweep of forty degrees of horizon, broken on the left by the Wailuku mountain, from which Heleakala is separated by a narrow neck of sand. I have revelled in tha expanse of sea before me, as well as in the two majestic mountains that stand out in tha morning, clear, cloudless, sublime. This is my dreamland. Hera my happiest days as a boy were passed, on the slopes of the grand old mountains. I used to inspect the sugar houses and knew the bliss of tha cane juice in every stage of its change; I explored dark, deep gorges, bathed in purest water that looked black from tha shadow in which it lay under tha rocks; rode horses, and donkeys when I couldn't get horses; perched in trees and chewed sugar-cane by the hour; rode five miles to church on Sundays through the forest, and wished it was ten. The preacher was an abolitionist who would take no selery from a society sided by slaveholding means, and had a herd time of it—always prayed for tha slave. An acre of rose-bushes, a forest of fig-trees made his place more attractive. I have longed for this visit for many a year and cannot yet realize that I am in an ideal land. But my mule is ready: now for the mountain-top and a tough jaunt!

Top of Haleakala.

Ten thousand feet from tha sea level! Before and beneath us is an army of clouds, islands and sea, forming a magnificent panorama. The clouds are at our feet; beyond, the earth appears—then the ocean stretches away for 200 miles, rising like a great blue wall, lifting volcanic islands into the air. Turning, I look down into an extinct crater 2,500 feet below, seven miles in diameter, filled with cones and lava beds and walled up with decaying rocks, on parts of which scant vegetation appears which supports herds of wild goats. But the grandest sight of all is the twin mountains of Hawaii, Mauna Kea and Mauna Loa, across a sea channel thirty miles wide. Clouds are gathered about their base, but the ragged crest of Mauna Kea, and the perfectly smooth and symmetrical dome of Mauna Loa, both about 15,000 feet high, sit upon the clouds looking down on us and receiving our homage. We lodged last night at "Olinda," eight miles from the summit, at a pleasant country house 4,000 feet above the sea, where the air is perfect and worth a pilgrimage from afar to get; reached the top as the sun rose out of the clouds, and held our peace and witnessed one of earth's grandest sights. We have lingered here about three hours and shall soon descend into the crater, to go with trusty guides through the labyrinth below and out of the exit opposite where an ancient irruption forced a passage. We shall throw stones into the "bottomless pit," stumble over lave beds, and pity our horses, hoping for rest and water beyond.

Kaupa, *Monday.*

Yesterday's ride was the roughest we ever had; so say we all, and most of us have done much herd riding. We skirted the rim of the crater for three miles over sharp lava beds, rising steadily, feasting our eyes on grandeur, disappointed only in not seeing the horizon line which rises to the level of the eye and creates the effect of a vast amphitheatre, the blue ocean meking the sides, and the mountains a throne or rostrum in the centre. But tha vast and veried masses of clouds below broke away enough to reveal the land and part of the sea and four islands. Every few rods brought us to the edge of the crater, opening up new views of this great grim workshop of the Titans. Friday we entered it, descending slowly over 2,000 feet on gravel slopes; then round for six miles amid cones and miniature volcanoes and crossing lava flows. Wa collected specimens of the silver sword thet grows in gravel where nothing else will; it is a rare and beautiful shrub of perhaps five hundred silvered needles, each one from six to fourteen inches in length; to get one home unharmed is a triumph. At tha exit of the crater was a descent of 8,000 feet wbieb took six hours. In the fog our guides missed tbe trail, and horses and mules went limping, climbing, struggling, over what would have been called impassable lava beds. Whet men and animals can do in emergency is wonderful.

Wet and weary we reached the thatched house of the native minister et this place, Rev. Mr. Puhi, thankful that not a horse or rider in our party of eleven—four of them ladies—had been injured. Being one of my father's old retainers, and having had a message, Mr. Puhi not only gave up his house to us and killed tha fatted pig, but had arranged two meetings for Sunday, one hora and one towards evening at Kipuhulu, some distance beyond. Here was Hawaiianism pure and simple. To the ladies was assigned the raised end of the house, some two feet from the floor, protected by a calico curtain. The rest of us had the further end. Hungry as beers, we hurried out the things and feasted after thirteen hours in the saddle; our animals were in the greenest of pastures. A pig was sacrificed and cooked in native style; a sight of great interest to the young lady from Massachusetts. A pile of stones placed over a wood fire was soon red hot; half e dozen were thrown inside tbo pig; a little water poured in, and it was placed, with potatoes, on the stones in a bed of lava, covered with damp material and heaped up with old matting and left to steam. There is no more perfect cooking than this. As it grew late the natives dropped in, squatting on the mats, *a la Turk*, watching and discussing us. Soon each one was stretched out, enjoying tha delicious *lomi-lomi* or movement cure of the Hawaiians, who are perfect in this art which they hava practiced for centuries. Our muscles are kneaded from head to foot as we lay in bliss on the mats. How it rested us! The tired feeling was taken awny: it was most opportune for the ladies. When the two women were kneading the rested who my father was, they wailed, and cried "Your father was our father," and called their children to come and help, till I counted six at work—two at my shoulders, two at my feet, and two at my thighs. With a variety of songs by our party, by the native children present, and e prayer by the venerable preacher, we were left to our rest. Their language was formed for idolatrous worship, which occupied most of the time of the heathen Sendwich Islenders. It is full of words ascribing homage, and praise and adoration, and as a prayer language is remarkable. I like to listen to the prayers of the natives. They render a homage that we cannot. A feature of our reception was a band of four small boys, who, with two flutes and a bass and snare drum, played "Marching through Georgin" for two hours with great spirit, marking time vigorously with their bare feet, unconscious of their ragged picturesqueness and of the proper limits of things.

A congregation of about 100 natives gathered at Kaupa church, a plain stone building standing on a rocky promontory, a favorite resort of chiefs in old times, for its cool breezes and heavy surf. Our party furnished one hymn, the people another. Notice having been given to that effect, I addressed them. It is easy to talk to people whom my father had often visited, for whom they had a still fresh affection, for many remembered him twenty yenra after his death. We came mounted to church, and after it rode ten miles to meet another congregation by appointment. The rond ran zig-zag, up and down steep ridges, giving from the summit fine views of the ocean and of mountain scenery, then lead us into the depths of luxuriant valleys. At Kipuhulu were nearly 200 natives who gave us a cordial welcome, singing, as we entered, their national hymn to "America." My discourse was rather a dinlogue, at times spicy and interesting. I asked them, among other things, the causes of decrease among their people, for I had looked down from the mountains upon the plains and valleys and had seen a sad desolation. There were few houses where I used to see scores. There were on every side the lines of rock showing where houses and gardens had been. They said, "*Pau i ka make*" (all are dead): many had gone to the plantations. One said that there were no good doctors near, so they sent for the native medicine men and they killed the people. Another said that there were very few children born. They admitted that much rum was secretly bought by the natives; that bad men had things very mueb their own way. I told them that in every other enlightened country in the world the people were increasing, because there were, in spite of many evil doers, enough industrious, moral people to maintain morality and decency. Such an element is wanting here. At the first meeting six pet dogs assisted. Varieties of the yellow dog species hera take tha place occupied in other countries by poodles, kittens, canary birds and pets of all kinds. I was amused by the look of injured innocence of these dogs, who, the occasion being speciel, were driven out by a berefooted deecon on tiptos, who "shoo'd" at them with a threatening wave of his hat. This they could not understend, and slipped in between his legs, or watched patiently at the door. During the service there was one dog fight outside, and would have been one inside but for a rush of the nimble deacon end a wild fling of his hat. The natives see notbing funny in this.

Many of these people bed known my fether, remembered me, and, after tbe service, they gave me an nrgent call to leava Americe and return to this country. The simplicity end naturelness of these people helps one to get into charmingly simple end neturel relations with them. We spent the night at the house of the Rev. Mr. Iokepe (Joseph), a graduate of the Theological School, who bad paid his way at the seminary by working in my mother's gerden. He is a young nativa and gives excellent promise of usefulness as pastor of the Hana church. He lives in a well built frame house. He and his wife devotgel themselves to us. Chickens, squid, *poi*, *taro* and sweet potatoes were heaped before us. Monday noon we reached Hana and were heartily welcomed by the proprietor of the Hana plantation, a Dane, whose kind bospitality we shall long remember. He has a charming home, a prosperous business, but is quite out of the world and our visit was a novelty. He is said to amuse himself by singing the strains of the Marseillaise Hymn at almost any time. His generosity was princely: we must stay several days; he was amazed at our rash intention to go on over the terrible roads before us. The luneh was delicious; the burst of song as wa prepared to leave was merry, for our fellowa knew the collega songs, and the Dane was up in "Gaudeamus" and "Lauriger Horatius"; the closing scene of a cross between a Virginia Reel and a war dance, and the embraca of our host and the son of a judge of the Supreme Court of Illinois, who is a blue poncho passed as a lady, can better be imagined than described.

Better tbaa ever fixed for our journey, wa moved on through miles of tropical vegetation, chiefly *lauhala* trees and never ending guava bushes, their stems festooned with vines, looking like n forest of May poles, till we reached tho *patis*. These are the precipitous, nearly perpendieular sides or ridges between magnificent valleys; on which frowning volcanic rocks are mingled with luxuriant ferns and foliage of richly contrasting colors; receding upwards to the source near the summit of Haleakela; and suddenly ending seaward in precipices of 1,000 or 2,000 feet that fall sheer into the blue ocean, so deep that a three-decker ship of the line could lie alongside. Sometimes the ridge would be like a knife edge, with e precipice on both sides; sometimes many rods in width, from which we could look far out upon the sea to the horizon line. Then we would descend the rough zigzag road cut out of the *pali* side; before us, easeades leaping into the valley below; at the bottom, a dark depth of forest and resounding water, and a terrible crossing over the stones.

Sometimes a few rods of level, grassy land at the bottom would separate the palis, the cataract above would become a sweet and quiet stream winding to the sea to meet huge waves from the North Pacific that threw themselves upon the pebbly shore making as they receded, a noise like the rattle of musketry. It was grand to look upon this: the deep gorge, or the lovely valley, the waterfall on the left and on the right the broad ocean, and the foam line of furious waves as they charged upon the rocks below, their crests rising in a sort of passion, like a line of wild horses, as they struck the crag or beach. A sand beach is tame coupared with this. Twenty times we pauting led on our patient animals up most outrageous roads to their dizzy heights, to be fanned by a delicious mountain breeze, then down to the sea level close to the breakers to the next ascent.

There were hours of work and but little progress. The roads had not been repaired for about ten years: for the people were gone; a party like ours had not passed for six or seven years. We realized the worst possibilities of mud and rock. Many of the rough stones that paved the rough, zigzag path had been displaced by mountain torrents. Our beasts had fairly to climb up and jump down three and four feet steps, with pain and serious danger to limb. The ladies stood it wonderfully. What flesh and blood can do on a pinch is marvellous, but they could not walk over it ell. To ride at times was dangerous, for the path was only from three to six feet wide and there might be death in a slip of a foot.

The young school-mistress too tired for the climb, rode up a pali, her horse slipped and fell, clutching the edge of the precipice with his hind feet getting a slight hold with his fore feet, able to hold on but a few moments, was rescued by the most powerful member of the perty, fortunetely just behind her. By cutting away the saddie that fell far below and pulling at tbe bridle he was able to save the borse who by an almost incredible effort climbed back to the path.

Rein fell; darkness set in, and tbo last pali was done with tbe aid of a lantern. But better than tbe lanterns was the instinct of our enimels. A mula led the way up and down when we could see nothing but only feel, followed by a wbite horse, barely visible to the one in front. By steady shouting we kept track of each other, and at last in a pouring rain, and nearly exhausted, reached the west valley and routed out the first Hawaiien we found, who had gone to bed, but instantly welcomed our drenched and tired perty, to their fortunately, framed house with separate rooms: giving us the best they had. Tbe ladies were soon comfortable in germents borrowed from native damsels, looking picturesque in "holokus," the graceful and sensible dresses of Hewaiian women. Coffee was soon made after a *lomi lomi* that took most of the weariness out of us, wo ley down and slept on mats.

So far as the native departs from his primitive methods his hospitality in most respects depreciates in interest and in comfort. Yet he must give up the old; there is no other way. The picturesque is forever at war with tbe practical.

There is a natural sweetness and kindness in the Hawaiian. He is never troubled. Next to tha scenery I enjoy their faces and talking with them. They asked me if I wasn't frightened when in the war. They think that it takes courage to fight. They like most people baven't true courage but like most people would make good soldiers under good leaders. A party of eleven like ours would not easily be persuaded that a white friend could entertain us conveniently, but the native host makes nothing of it. We simply lie down on the mats, and perhaps use his kettle for boiling water or vegetables. He is not troubled about dishes, chairs, furniture or fixings of any kind. What can't he had we do without and are happy.

An ell day ride after the night's experience above related brought us back to Haiku and Makawao.

The feature of it was the beautiful valley of Honomanu, the deepest and finest of all. Sitting on the rocks we watched the waves rolling close under our feet, looked up to the head of the valley, drinking in all we could of pleasure. It was decided that each member of the party should be decorated with the "Order of Honomanu," the badge to be worn only by those who had made this trip. Excepting two or three who had lost one or more shoes our animels came bome in good style, galloping easily over the roada. I am amazed at the endurance of these common island horses fed on grass. They are equal to mules as climbers. One raised in e stony district needs no shoes over the worst roads; not one stumbled or fell.

Makawao, *June* 26.

A few hours rest, then to West Maui. I have "Olinda" on the brain. It is 4,000 feet over the sea on the side of Haleakala, is to be I think, e resort not only for residents but when known, people from abroad will seek it. On summer evenings a fire is usually needed. The ocean and mountain views are superb. Land is cheap and a $1,200 two story home is not only comfortable and sufficient, but a good investment. There are already three houses and more are planned. Come here and live by one of God's great altars. Your tired brain can nowhere rest so well.

One of our party had picked up an idea which was adapted to express the constant sense of wonder and admiration. Adjectives were worn out. Twenty meant perfection. As we rose to the view you would hear Eighteen! Eighteen! If it was surprising then Twenty! This applied in various ways, was convenient and amusing.

Wailuku, *Wednesday.*

This place is named from the river Weiluku, which means river of slaughter; for here many years ago, King Kamehameha I. conquered the chief of this island, Maui, and tha stream was choked with the bodies of the slain. This was my father's second missionery station, 12 miles from Haiku: bere I was born in 1839. The old mission house stands in the midst of a lonely garden and is now the home of the veteran missionary, Rev. W. P. Alexander.

From it is a view of Haleekala, or East Maui, which is connected with West Maui, or Wailuku Mountain, by a low, sandy istbmus once under water. These two sister mountains are totally unlike. Haleakala is a simple symmetrical giant, rising like a monster from the sea with a steady slope from both sides, a twenty-five mila curve of wonderful grace. Wailuku Mountain is nearly as long end high but is jagged, rough, thrusting many high peaks above many lesser ones, into the clouds, and is dented in the middle by a velley which not only separates the two gigantic peaks but expands in the heart of the mountain into a vast amphitheatre where almost perpendicular sides are buttressed with sharp ridges running up into needle-like points. Cascedes drop from the clouds on every side. Bare, brown rocks reveal the eternal foundations on which the mountain rests, but time bas softened it, and much of the ancient sides and especially the velley depths beneath are clad in beautiful verdure. The light grean kukui tree, and tbe dark fern are in contrast every where, and light through the frowning clouds above, is making brigbt spots upon the luxuriant foliage.

I write this sitting on borse back on a bigh hill in the centre of the amphitheatre. My borse enjoya tbe rich grass wbile I feast on mountain, cloud, light, shadow and tropical and volcanic glories. Before me is a narrow valley tbrough which we came, between whose sides I see the cane fields of East Maui and the happy homes of Haleakala the finest play ground in the world.

From a remote mission station Wailuku has become the second town in the islands. Tbere are three plantations joining each other, the great "Spreckles" plantation of 20,000 acres on the plain was recently started. Tha proprietor is known by tha natives as "Eono Millions" (Six millions) that being his reputed wealth. He owna tbe principal sugar refining mills of California, huya almost tha an-

tire sugar crop of the islands: the next one THE HYGEIA HOTEL, THE

tire sugar crop of the islands: the next one is estimated at 40,000 tons; fixee the price to suit himself; what he won't buy can't be sold, and he is a good deal of a king. My host, who was a small boy in old school days, has 900 acres of cane planted and 250 laborers of twenty-two nationalities, as follows: Hawaiians, Chinese, Guammen, Japanese, Mexicans, Chilenbs, Manilamen, Malays, Hindoos, American Negroes, Zanzibar Negroes, Germans, Norwegians, Danes, Americans, Englishmen, Tohitians, White and Black Portuguese, Peruvians and Spaniards.

Owing to the difference of languages and by good management he has never had a labor revolt, so common, in a bloodless way, on these islands. Confusion of tongues is here more favorable to progress than it was at the tower Babel.

The labor question is very serious. My friend says that his Hawaiian employes whose terms of contract for labor will soon expires will not contract again, but go off. With him and all planters the prospect is gloomy. Laborers got from sailors the notion of advance wages on labor contracts, and insist on it. They are reckless with money in hand, and are demoralized by spending earnings beforehand: Chinese, and others run away and are seldom caught, because shielded by each other. What with losses in their wages the $18.00 usually paid would he less expensive than the $20.00 paid as earned. My host leavee this steamer for Kaneas, hoping to secure Negroes from the overflow of immigrants into that region.

He wisely proposes not to secure them by contract which they ore likely to resent, but if possible to get intelligent men for specific purposes and to give them an interest in the crop.

Best City-made Work,
which I will sell at and below cost. All other goods in my store will be sold lower than ever, in consideration of the times. Please give me a call and see for yourselves. Ladies' and gentlemen's work made to order, and repairing neatly done.
MRS. N. M'NEILL, HAMPTON, VA.

THE HYGEIA HOTEL,
OLD POINT COMFORT, VA.
Situated within one hundred yards of Fort Monroe;

At the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. mails, landing only 30 rods from the Hotel, which is sustantially built and

COMFORTABLY FURNISHED;

Has hydraulic passenger elevator, gas and electric bells in all rooms; winter-rooms for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or public building in the country. And as a resort for the pleasure seeker, invalid, or resting place for tourists on their way to Florida or the North, this House, with accommodations for about

SEVEN HUNDRED GUESTS:

Presents inducements which certainly are not equaled elsewhere as a summer resort, or cold weather sanitarium. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleeplessness and nervousness the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics at the Hygeia.

Hard Crabs
FROM HAMPTON ROADS.
Carefully Picked, Packed, and Hermetically Sealed, by
T. T. BRYCE,
Normal School Grounds,
Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On every can will be found full directions how to prepare Crab Salad, and Devilled Crabs,—two dishes concerning which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surprising delight of the palate. The meat of the crabs, beyond peradventure, the most delicate and delicious of all sea-food, far exceeding in fineness of flavor and of gust, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than if they bought the crabs at the markets even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For picnics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $6 00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $1.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

SOUTHERN WORKMAN

SUPPLEMENT.

SEPTEMBER EDITION, 1880.

(Continued from page 96.)

Teamsters are in great demand; for mules and oxen are used. Negroes are bora teamsters. How would the Federel army ever have marched on to victory had not colored drivers cosxed the satien'a mules to move its baggage! The better class of colercd men would do well here as teamstere:—there is no end of demand for them at say $20 per month, or $12 and "found."

The weak point of plantations so far as I have seen is the workmen's quarters. I have seen laberer's rooms little better than the avcrage Chiaese quarters in San Francisco. They are usually dirty and uaattractive outside. But there is a marked differaace in this matter in different places.

It don't pay to let tha workman aeglect himself eves if he wishes to. Work for them will tell and will pay. To look out for the way the plastatioa hands live would be a wise and far reaching policy, aven if present dividends were reduced by it. This matter is too geaerally aeglected to the altimate serious damaga of the planters, I thiak. The Negro, aad I believe others would, encouraged, make pleasant and attractive homes. The food is salmon, fresh meat, rice, aad flour of good quelity.

Intelligent Negroes accepting an iatereet in the crop would probably accamulate hundreds of dollars at the end of say ten years, or a little more. The Hawaiian is too short-eigbted and childish to do this, as most Negroes are. There could not be a better climate for the freedmen. But this move should be a very cautious and grndual one.

LAHAINALUNA SEMINARY, *July* 3.

I bave crossed tha West Mnui Mountain, alept at Olinda plantation and rode into Lahaina in time for the commencement exercisea of this highest seminary of learning for antives in these islands. The old church was scantily filled for natives are scarce; but tha boys made it interesting. Here are sixty male students on the roll, taught entirely in the English language. Their imported teachers don't know a word of native. They averags about 20 years of age, are bright and brainy, but morally weak. Their singing (all was in Eaglish) was rather subdued in tone but melodious. Orations and declamations showed good thought and moch aatural grace. Eaglish is to them what it is to our Hampton Indians. The course of study is very like that at Hampton, a high school curriculum without the classics; they go beyond Hampton in Mathematics, taking up trigoaometry. Tha course of study is four years. My old chum Mr. Hitchcock is Presidcat. He is assisted by excellent white instructors. Tha leading natives in the Legislature, and in all departments of Hawaiian activity are graduates of this school: yet many of its pupils have gone to the bad from want of moral training, and under great temptation from power and office.

This Institution was tha chief stimnlus or saggestion thet led me, when sent in 1866, by Gen'l Howard to scatter tha surplus population of the peninsula of Virginia, to commence an educational work there. My father, as minister of Public Instraction had supervision of it. It was on tha manual labor plan, tha boys raising their own food, but little or nothing to sell; and n flock of goats supplied the meat, inercasing as fast as they were killed off. It had done a great work for the islands and its graduates had gone as missionaries to islands beyond. Education by self-help had succeeded here, and though on all sides, American prophets declared that no maaual labor school in the United States had been a sncceas I felt that the conditions with the natives and the Negro were similar and that fnilure with the whites should not weigh. I have met the boys pleasantly. They are quick and intelligent but not thoughtful. Now and then n man of epecial power appeared. These are the men to save their race but as a rule their moral hasis is too weak to stand much temptation. A Hawaiinn in a responsible position cannot say "no."

This place is perched above the town of Lahaina some 800 feet on the slopa of Wailuku Mountain, and overlooks tha ocean, on which just in front, lies the island of Lanai, seventeen miles in length, a mountain rising from the sea. On tha laft is Kahoolawe, a nearly barren island once tho Botany Bay of this Klagdom; then n sheep ranche, but the sheep cleared np every green thing, were removed and the island is blowing away in great clouds of dirt. On the right is Molokai where tha leper settlement is with 800 incurable, wretched, pitiable lepers, costing the government about $40,000, a year. The disease is slowly spreading.

I am sittieg in a tree on a platform which commands one of the loveliest views on the islands. Here lies the sea and the three islands; the sua is setting; a breeze from the ocean faas us. Below is Lahaiaa, now a sugar plastatioa. Dark clumps of trees dot light green cora fields; cocoanut trees line the shore. This is a quiet, sweet rest amoag the hilis where hoesst, good work is being done for the Hawaiian race. The boys now work three hours a day for five daya a week, beeides all vacation. Every two students have a room, bedstead, table, &c. Not a cent for clothing, hooks, board or incidentals. Oae-half of the boys wholly cuppert themselves; the rest have some aid. It takes grit and makes grit to get through here.

I have reached Honolulu just in time to send off the above by steamer.

HANALEI, ISLAND OF KAUAI, *July* 7, 1886.

Many have given to this lovely valley the palm for beauty over the many claimants for this honor on these islands. Aloag the graceful curva of tha bay in front, the surf breaks in loag white lines. The approach from the sea is charming. In the backgroaad rise many thousaad feet high, steep mountain peake crowaed with clouds or rich verdure, cascades falliag like silver oraaments on a dark green garmeat. Below there are foothills of a lighter shade which encircle the plaina, compessing a level of rich land divided into "Princeville" sugar plantation, extensive rice fields, aad a delightful mission station. Riding around the island, we came suddenly to a bluff whence we looked down upon this sweet valley. In the middle of it a brond river flowed gently to the sea with many n pretty turn. Our little party took possession of the old mission house which is embowered in trees, being welcomed and cared for by a family of native retainers.

Kauai is geologically the oldest of all the islands, being somewhat separate from the rest of the group, aad different from them both physically nnd in the characteristics of its people. It is picturesque nnd beautiful. Its hills and mountaine rise in an irregular way, affording views of rare variety and charm. On its crumbling, mossy rocks have grown ferns and trees which beautify its highest peaks, leaving no bald summits such as we see in the other islands, but everywhere, except on the red foot-hills, a mantle of green renching from the shore to the moontain-tops. Visiting the Hnina caves is a matter of course. The road winds along the shore where the breaking waves dash high, across gulches, through rivers where one's feet are coiled up on the horse's back to keep them dry, and past acres of rice in the valley bottoms, planted by Chinese. The shades, from the light yellowish green of the the beds of young plants, to the dark green of the ripe fields, are the most exquisite I ever saw.

The caves are great open mouths at the base of a hugo natural pyramid which stands like a sentinel by the sea. It has always been an aunisement of the kiags to have lighted torches thrown at night from its summit, a fair substitute for rockets. The caves are full of sweet, pure water of unknown depth, on which a canoe-uscd to float to carry visitors far into their dark recesses.

My companion, the government doctor, enquired at many houses, "Is there any sickness?" Tho great panacea of the Hnwaiien seems to be *aila* (castor oil), which the old natives like from long use of it but the young ones detest. Stalks are largely consumed. The doctor usually leaves medicine for prospective ailments, for he comes around but once in three months. They believe in heavy doses. Homaeopathy will never succeed among Hawaiians. Nor will they fully submit to regular practise. If the dose don't work to suit, they conclude it is a case beyond the foreigner's skill, that it is a native and not a foreign disease, and go to their medicine man, who will order a white hen nnd black pig cooked nnd eaten, with certain incantations. In common with the Chinese and other liko races, tha Hawaiian when sick, feare death nnd weakens accordingly; superstition seizes them all alike. Tha Chinaman says, "Me hop die," but sticks to his white doctor. He hates salts and castor oil *a priori*, and the first dose is usually put down by force applied to his ears or pigtail. But he yields and soon has faith in regular physicians, following directions with care. The doctor, who was for a while sheriff, tells me that Chinese fights consist chiefly in pulling ears and scratching the skin back of the ears with the finger-nails. They are brave only when in overwhelming numbers. One native can thrash three of them. He states that leprocy is increasing, that the authorities are lax in executing the law for the isolation of lepers. The Chinese do considerable business on this island, as on others, by way of selling rum and opium on the sly to natives, but their use is not very general. The rice plantations, always owned aad managed by Chiaamen, pay $18 or $20 a month besides board, get the best workmen, and are said not to employ opiom smokers, working their men from daylight till dark. At Hanalei, land is rented yearly at $25 an acre for rice crops, which are exhausting to the soil but very predtable. Hawaiian rice is very superior, being more costly than that imported from Chiaa.

Kauai is a well watered island. The tourist is continually crossing streams by scow or ford, perched on the top of the saddle to keep his feet dry. He frequently looks down into sweet green valleys, upon quiet winding rivers, navigable by boats for miles. Plantatioae are easily irrigated aad are numerous. Fuel is scarce: Australiaa coal costs $14 a ton; it is used to supplement the dried cane refuse. Steam power is universal. The Putaam engine from Fitchburg, Mass., is popular. Water, not overabundant, is more profitable for irrigatioa. Kauai is, I think, the best governed island. The population is not large aad is the most remote from corruptiag influeaces. It has excellent roads, from hnviag good road supervisors. There are nowhere such long, delightful gallops. It has fair schools, a good class of native preachers, and generally judicious plantation managers. The work of white missionaries has nearly ceased. The feeling against foreigners so remarkably developed in the last twenty years is less marked here. Transgressors are quickly caught by the wide-awake sheriff, put on the roads, nnd more than pay their cost. Peace, security and comfort. After Maui mountains and precipices, traveling on Kaaai is like a smooth sea after n tempest, especially when one is favored as I have been in my horse "Jimmy," a splendid pet bay, who after eight hours' riding was full of spring and dash as at the start. My faithful Maui mule and my Kauai steed are forever emblamed in my memory.

KOHALA, HAWAII, *July* 16, 1886.

The rose of a bliasfol Hawaiiaa experience has its thorn in the agony of inter-island travel in the little steamers, which, though a vast improvement on the sailiag vessels of old times, the miseries endured on which would make an Iliad, yet pitch about in the rough ocean channels between the islands till the passenger, twisted and wrenched by sea-sickness, is, like Christopher Columbus, ready to kiss the first shore he steps upon. From tha *Likelike*, the best of theai all, I landed last night at Mahukona island, Hawaii, and, in company with n Noble and ex-Miaister of the Kingdom, took an express-wagon to this place, over twelve miles of rocky road over which our four horses were urged with incessaat whip-cracks and appropriate oratory. No Hair, Dirk, Sammy and Poo Nui (Pig head), whose names are forever impressed on my memory, brought us after midnight to our friends aod to rest. My host is the veteran missionary, Rev. E. Bond, who for forty years has been stationed here, and has far the strongest hold on his field of any of the missionary workers. He keeps the natives in hnnd; the rest have nearly lost their hold and influence. Very intimate with my father, it has been a deep pleasore to talk over with him old times and the Hawaiian problem in which he is one of the ablest observers and actors. Like others, he feels that the Hawaiian is doomed to extinction, but, unlike most others, is using every energy in their behalf, preaching, working up schools in this district, esrolling for good teachers, and creating a *morale* to be found in no other region on these islands. Long ago, in company with others, he started a sugar plantation to supply work for his people, and is now indepcndent. We have been over it, looking at things. I was struck with the three powerful steam traction cagines, one of which will draw twenty toos up a slope of one foot in eeven, do tha work of twenty-five oxen and eava no end of suffering to beasts whose miseries on Hawaiian plantations, under native drivers, is frightful. They are n recent experiment, and seem successful. Hauling sugar-cana sometimes costs as much as to raise it. In tho preseat rush of the business it is death to cattle: mules are being introduced from California for this purpose. This plantation pays handsomely now, after doing nothing for twelve years; it is taxed for $450,666.00. There are six plantations in this region averaging n valnation of $250,000.00 apiece.

Kohala is the caas grower's paradise. Its lands are marvellous for fertility. I saw this morniag a field of eighty acree which has been cropped steadily since 1864, fifteen years, and last year produced as an average of seven and one-eighth tons of sugar per acre. Four or five tons are a common yield here. The cane juice, by the saccharometer, stands often at 12 degrees; on other plantations, usually from 6 to 10 degrees. Twelve degrees is an exceedingly rich yield. These statements are absolutely reliable. I say this because foreign sugar growers cannot believe them. In the South, a planter who raises a crop every year, between frosts, is, I am told; satisfied with three-fourths of a ten of sugar per acre, and one and one-half tons is very high. Here cane ripens in a little less than two years: then there is the volunteer or "rattoon" crop following it, of much woody fibre and less saccharine matter which is worth less than half the first crop, but requires much less attention. The cane that yields so richly is called here the *Lahaina* or *Tahiti* cane, is tall, white, and wonderfully sweet It may be worth the thought of our Southern planters. All are not making fortunes here. There are scarly as many solemn faces as bright ones on these islands. Here, as elsewhere, eternal vigilance is the price of success. Drought, the labor question, high cost of machinery and material, rough country and dangerous and distant points of shipment on rocky coasts, make the expenses appalling. Stockholders sing hallelujahs over good managers, and some are in sackcloth over poor ones. An orator should know everything, Cicero says, does he not? A plantation manager should be everything. These fellows lie awake nights over their business conundrums.

The planter wishes to show me his machinery. I wish to see how his workmen live. So we compromise and do both. It is peculiar to this plantation that native Hawaiians have chargo of the vacuum-pans as well as of the traction engines. The former are elsewhere managed by whites. Of course only an exceptional native can do this work, but there are exceptional natives, as well as Negroes, who can quickly and easily annihilate some of the accepted theories of their race. Think of making steam as many plantations do, with coal costing fifteen dollars a ton; but only to supplement tha "trash" or cane refuse which, when dried, supplies most of the fuel. Here no coal is needed. But to the quarters. There are 250 hands, Hawaiian, Chinese and Portuguese: they are paid about $18.00 a month, besides house rent, n garden patch and pasture for horses. The last two provisions are not in the labor contract, but are n wise addition. Before tho late Reciprocity treaty, wages were from $6.00 to $7.00 a month; now they are about a dollar n day. The quarters on this plantation are noticeable for their neatness, comfort and homelike appearance. I went through them with Mr. Boad, who is one of the stockholders. He personally encourages decency and improvement. Unlike the quarters I have seen elsewhere, there are flower and vegetable gardens about the plain, wooden, one-room houses, some ten by twelve feet. Verandahs have been added, and fences put up. Some of the natives have built extra rooms and houses with their own money, and created n homelike effect that is of the utmost benefit to them and value to the plantation. But much more could be done. They have almost no labor troubles here, and all the workmen they want. An employe who is well fixed re-engages when his time is out. One who has a minimum of comforts has no local tie and is apt to change.

There are 80 Chinese, of whom about 40 are Christians. Kontetyn, a religions Chinaman, is employed by the plantation at $366.00 and a house, to labor among them, and they, with the natives have a Wednesday evening prayer-meeting, half an hour for each, one waiting till the other is through. There is a neat chapel in tha midst of tha quarters. An evening school for adults has been well attended. The education of tha plantation children is looked after. For years this so-called missionary concern was rather laughed at by some until the dividends began to come in. The value of attention to physical, moral and religions matters is evident and is, I think, a lesson to other plantatione. Even a Chinaman has a soul somawhere in him, and it pays to work at it.

POLITICAL OUT-LOOK.

There is no middle class on these islands. The low class is unfit to, but votes and has a majority, and through its representatives in the Legislature is getting rapidly away from the influence of good advisers; has already voted $300,000 in excess of prospective reve-

nnes, and don't care, for, as they say, "tha *haole* (white man) pays the taxes." Property is not fairly represented.

The condition of the lower class is therefore of vital moment, and every possible lift and means of improve-

she thinks best. The good man near me has not eaten a decent oyster for forty years. He says the first thing he would order in American would be oysters. I hope to arrange so that my Hawaiian friends shall get some of Mr. Hampton.

gins. It takes time, and in time it can be done.

One thing should be said: Native Christians have continually before them the examples of nominally Christian men, that justify any wrong on their own part. The injury from this cause is wide-spread and

tain thirty miles inland. There are now 20,000 goats; 600 of the Angora breed. Quantities of skins are exported. It has the only used open fireplace on these islands. The air is cool and delicious. There are glorious views in every direction. Mauaa Loa, on the slope of which, 4,000 feet above the sea, this

anes, and don't care, for, as they say, "the *haole* (white man) pays the taxes." Property is not fairly represented. The condition of the lower class is therefore of vital moment, and every possible lift and means of improvement should be given it. Nothing tells more than attractive homes, and homes can be made attractive by spending very little money and time; nothing would pay better. In the prevailing status of the working men I see a fearful discount of the future, for his representatives will care as little for the interests of Capital as the dirty occupant of a dirty and cheerless shanty. A few planters are thinking of these things, and before long the result may be seen by way of giving to the laborer interest in profits, or a bonus for every previous year's service, or in improved surroundings. Rough and low as many of the hands are, I believe that work in this direction will, in the long run, pay as well as work for big dividends. The anti-*haole* sentiment among the natives is as evil as the wicked spirit that led the swine in the Scripture story to rush to and perish in the sea, and tends in the same direction. White men were first regarded as superior beings; and hence the complimentary epithet of *haole* (sacred white pig) was bestowed on them.

Now, there is nothing sacred about them or their property, and the fault is in part theirs. Not that the Hawaiians are malicious; it is because they are ignorant and short-sighted. They are children, well disposed as ever, but when put in power they don't know what they are about.

The Reciprocity treaty with the United States, making sugar free of duty, has been a tremendous stimulant, and works like other stimulants. It seemed necessary, for, while plantations which had been paid for were getting along well, they were very few, and the business was little known. The problem was how to pay high interest on loads of borrowed money, and to stand the heavy costs of experience. The treaty was the thing. But it has elements of danger that need study, and, if neglected, the good that is coming from it may bound back like a boomerang in the form of evil. It has brought about 6,000 Chinese (without woman) who are creating wealth, many of them respectable men, married to native women and upright in business, but while building up fortunes, they are, as a class, debauching the natives, especially the young females, at a fearful rate, and peddling opium and rum all over the land. The Hawaiian, meanwhile, gets more wages, dresses better, builds and lives better, knows more, decks himself in fragrant wreaths and capers about to the death wail that is sung by every breeze.

A native woman often prefers a Chinese husband even to a white man, for he is a good provider; but to one such there are ten corrupt men. The eross between the Chinese and natives is excellent, but far from enough to offset the sterility and immorality resulting from the Asiatics, who have swelled the majority of males among a weak people till virtua is almost impossible.

FRIDAY.

My Kohala notes run on from my detention to-day by a rain storm. These old mission homes are quaint and interesting. They have old time things and ways, furniture that has done duty for forty years; prayers twice a day; a sweet quiet tone is over all the home. Talk with the veteran missionary is full of interest. Rev. Mr. Bond is a close analytic observer who sees straight to the sense of things. At the next station, Waimea, I shall visit the Rev. Lorenzo Lyons, whose lyries have given to the islanders the best things of our English poets. After that I go to the Rev. Titus Coan who "starred it" some years ago through the States, telling of the gospel triumphs in these islands. He sees and tells the bright side, the striking illustration, the stirring event—not the dead level of daily reality. Like the rest of us, these men see and say according to temperament and standpoint.

The Puritanical ideas and ways of the missionary fathers have not been generally followed by their children; there has been modification, not revolt. A notorious reaction in one bad case gives the effect of a mutiny all along the line. Hence the weak generalization about ministers' sons and deacons' daughters. The character of these descendants is, with very few exceptions, excellent. Few gray hairs have come from recreant children, but, rather, worlds of comfort from loyal descendants. Seldom agreeing fully with their fathers in regard to missionary operations, they champion the work as a whole and honor the men that, under God, created for them a Christian country, and are grateful for the heritage of blessing that is sure unto the third and fourth generations of those who give their lives for the good of men and the glory of God. Some of the old rules were, we think, rather weak or absurd; but why like fools rave over non-essentials? Rather let us reverently pray that we may have a tithe of the unselfishness and noble devotion of our fathers and mothers. This rainy-day letter in Father Bond's study may go over ground already traversed; but I follow my pencil, and the Hampton editor must cut out whatever she thinks best. The good man near me has not eaten a decent oyster for forty years. He says the first thing he would order in Americs would be oysters. I hope to arrange so that my Hawaiian friends shall get some of Mr. Bryce's best brands put up at Hampton. The meanest things are sent here, and considered a luxury.

How Bryce's canned "Giants" or "Beauties" would delight these exiled Yankees! I could not long be away from the bivalves of Hampton Bar or Lynn Haven Bay, but there is compensation in the succession of delicious pineapples, bananas and figs that are brought to me from the garden.

The sweetest, cheeriest life in all this home is a deaf mute daughter who is all sparkle and brightness. Her never failing smile is a comfort to all around her. The cats and chickens follow her about, for she makes an atmosphere of her own that all things, I believe, even the flowers, feel. This is a day for children, for romps and stories. Instead of a thirty miles' ride, I am in for meditation, games or letters. What wouldn't I give for the two little girls who are playing under the elms of Stockbridge! Companions, more than they dream they are, of my long journeys.

The missionary work here ends where Christian effort in New England begins. There, as a rule, respectability is assured without regard to church membership. It is an inheritance from the past. It is supported by habit, custom, and by public sentiment. Bad men wear it as a garment, for good social standing demands it. A fall is into an abyss. Among these natives our standard of respectability is not to be assumed even of church members. Good social standing does not demand it. The Christian is not one who is strictly moral but who tries to be; not one who never lies and steals but does so less than others and does it in spite of himself, because the past has put into his blood an inertia or impulse that way, and *meum et tuum* are new and not time honored notions. Yet, he works as hard at his religion as the cold moralist. Habit, custom, sentiment, are all against respectability. A fall is not into an abyss because there is nowhere to fall from. They are low but not degraded for they never fell. When a heathen desires to change his life, how can he go through the experience of an intelligent sinner who can so much more fully realize his relations with his God?

Mr. Bond says that in his forty years of work he never saw, amidst much demonstration of the kind, but two cases of what he believed to be genuine and deep sorrow for sin. Yet he counts his trusty native Christian members by the score, and the discipline and character of his people is perhaps the highest in the islands. They knew enough of right and wrong to choose either intelligently capable of remorse; a future suffering consisting merely of that has no terrors for them any more than for an average Negro audience. Joy and suffering, heaven and hell to such people are real more as outward than inward conditions. A deep sense of guilt is hardly possible to those who have not sinned against light. They are not debauched by immorality till they know the wrong in it. To set their faces towards a better life is all any one can do, and to fail sometimes at their weak point is not peculiar to heathen converts. The weak point of the low man often differs from that of the higher man. The one is sensuous, the other is selfish. The one is transparent and acts it all out; the other may have a veneering of manners over a rottenness of which the savage is simply incapable. A just judgment of character is extremely difficult. What is mortal sin in one may be venial in another according to the obligation under which they are put by knowledge and opportuntiy. Those who have respectability thrust upon them by the accident of birth are to be judged by a different standard from those who can attain to it only by a struggle inconceivable to the former. The one sails with wind and tide perhaps in contempt of the other who goes against it.

A veteran missionary said to a friend in America, "Our converts are about where your respectable sinners are" Judged by the progress of the Hawaiian people since 1820 the missionary work has been a grand success. Judged by Puritan Standards of morals, it has been a sad failure. With loose ways of living, everybody in one room without partitions, what must be expected. Who, with us, is or can ho much better than his daily associates or far above the level of his surroundings. The inconsistent and backsliding Hawaiian who puts forth all the strength he has for the *pono* (good) need not be given up if only his isn't a hypocrite. They are by nature easy going and accommodating to the last degree. The Grace of God helps them to overcome, but it does not extinguish their physical impulses. Choosing the service of God is one thing; formation of character is another. We cannot at once assumo stability of character when assured of conversion. Hahita cannot be reversed like a steam engine. It takes time, and in time it can be done. One thing should be said: Native Christians have continually before them the examples of nominally Christian men, that justify any wrong on their own part. The injury from this cause is wide-spread, and most discouraging to missionary teachers. Civilization sends to the heathen, life in one hand and death in the other; the Bible and the bottle; preaching and powder, the loftiest and the lowest lives. The yearly attack of thousand of sailors with plenty of money, upon native virtue was most injurious. Among a class of foreign residents of some pretensions, immorality has been fashionable.

Since the retirement and death of the old missionaries and change of pulpits into the hands of weak native pastors, there appears to have been some relapse of morals, but not from this cause alone. The influence of Kamehameha V is thought by many to have put this people on the down grade. The fact however remains that missionary effort at these islland has been the means of placing them among civilized nations, has established order, education and religion, and made Hawaiia *nei* the point of departure of regenerating work for Polynesia. The lessons it has taught in the work of uplifting men will benefit the world.

S. C. A.

[*Continued in our next number.*]

We extract from a letter of General Armstrong's (of later date than the above), which our space will not permit us to publish this month, an account of his visit to the Volcano of Kilauea, a subject which is well illustrated by our first-page picture.

VOLCANO HOUSE, *July 28th.*

Two and a-half days in Hilo were not enough to do all the pleasant places. I had to give up the Rainbow Falls, the Natural Bridge, the Wailuku river, and the slide over the water-fall whish, thirty years ago, a few of us initiated, and in later years were followed by the Duke of Edinburg and his suite.

Last Monday we left for the volcano (Kilauea) by the Pana road, a sixty mile trip, supplied with a camping outfit. We went, the Twins and myself, thirty miles the first day, along an ancient road, every mile of the way over old lava flows. Trees and shrubs thrived, and cocoanut trees abounded on all sides. I tasted an *okie* (the Hawaiian apple) for the first time in two decades. My first oration when a boy, in 1852 I think, was a claim for the superiority of the Hawaiian over the American apple which was championed by a Yankee schoolmaster. The *okie* is a juicy red apple, growing on a beautiful tree; it is delicious to the taste, and harmless, no matter how freely eaten. Our tent was spread close by the shore in the presence of some twenty natives, who thought it all wrong not to accept their hospitality, and kept up a ranning remonstrance. The waves broke a few yards off upon the rocky wall some seventy-five feet high in which this entire coast of lava flow terminates. This and the day after will be to me memorable for the grandest surf I ever saw. The road lay close to the edge, and as huge rollers broke with a crash upon the solid ramparts, the spray would fly far into the air, falling within a few feet of us. It was impossible to resist crying out when a magnificent billow would fling itself with a death-song at the steadfast rock. So the ocean sang all night.

Cocoanuts would do for us, but our horses suffered for water, and we pushed on along the curiously straight and good road of Pana, over bare and ragged flows of recent date, or ancient beds that had flowered out in ferns and trees, past the deserted villages of a dying people, till we struck the mountain road; and, after eighteen miles of riding, over old lava beds, through a charming forest, a wonderful hunting ground for turkeys and wild sheep, we reached the Volcano House well refreshed, for had we not everything with us, and were not the Twins, our former schoolmates, adepts in all the arts of camping out, and didn't we have a rousing dinner in the woods just before going in? But what do they have here in this tropic land with soil that beats the world by producing five and six tons of sugar to the acre! Potatoes from New Zealand! Canned chicken and beef from the States! Vegetables from New England, where there are but three months of warm weather and more stones than soil! Condensed milk, amidst luxuriant pastures where grass is a foot high all the year! Reason—the scarcity of labor and a ground worn that destroys vegetables. But the Chinese raise and peddle a few vegetables.

The Volcano House is a commodious, pleasant, one-story frame building close upon the edge of the crater, very pleasantly kept. I never ate anything nicer than the wild mountain mutton at dinner to-day, and the strawberries are capital. It is one of five stations on a goat ranche extending seventy miles along the coast and to the top of the mountain thirty miles inland. There are now 20,000 goats; 900 of the Angora breed. Quantities of skins are exported. It has the only used open fireplace on these islands. The air is cool nod delicious. There are glorious views in every direction. Mauna Loa, on the slope of which, 4,000 feet above the sea, this place stands, rises grandly on the right. Beyond it the purple crest of Mauna Kea appears. Mr. Ferneaux, an artist, is here, making sketches in oil, part of which will be exhibited in Boston next winter. They are capitally done, and are the only satisfactory volcano views I ever saw. After a long ride, the sulphur bath, from the fumes of a great sulphur bank close by, takes all the weariness away and gives one a delicious sensation. It is worth all it costs in time and trouble to visit this, the greatest active volcano in creation.

4 O'clock, P. M.

IN THE CENTRE OF THE CRATER: ON THE EDGE OF THE NEW LAKE.

We have descended some 900 feet, and traveled over three miles of waves of black lava, which lie just as they cooled not long ago, wrinkled and seamed and lapping over each other; visited the old lake, Hale Mau-mau (eternal house), so called from the fact or tradition that kings and high chiefs were thrown in there for burial. From fear of molestation by enemies after death, the kings, in old times, were put secretly away. The remains of Kamehameha I., the Hawaiian Napoleon, have never been found. This lake of molten rock is about 400 feet in diameter, with a blackish incrustation that gently undulates and is constantly broken by fiery jets. The greatest activity was at the centre, where every few minutes, a beautiful fire fountain would burst some twenty-five feet into the air, and fall with a roar like that of surf. We watched the fiery play for over an hour from a peak 400 feet off; then came here where the action is magnificent. As I write, a central fountain of liquid fire is playing thirty feet into the air, and less than a hundred feet off. The sides of the lake are low; we are to windward, and can look as into a big boiling kettle. It must be three hundred feet in diameter. The lava is dashing with a ceaseless noise against the sides. Our coffee is boiling over a crack a few yards from here; right under it is red-hot lava. We have broken the routine of the place and got the guide for a night view. We shall sup by the edge of the lake of fire, on Boston Baked Beans and condensed milk from New Jersey with our coffee.

We are killing time till dark by roaming around on the warm crust, poking our long canes into the cracks that traverse the surface in every direction, to see if we singe the ends, watching the Pele's hair (Pele is the Goddess of the Volcano), made by the spray of the lava waves, which the wind catches, attenuates into a stiff silvery thread and carries miles away as far as the seashore. We must study the bad places for the night walk back, for the surface is covered with silk-like, hollow folds of soft, shining lava waves that yield to the least weight, and one may drop from one to many feet. There is treachery everywhere, but, not much danger. Our guide, an intelligent German, has amused us with an account of some Russian officers who "skedaddled" out of the crater when Pele became a little restless; which reminds me of Father Coan's account of an American naval captain who became demoralized on a visit to an eruption and made tracks for the shore. Think of people in Hilo, thirty miles distant, at night reading newspapers by the light of a fountain or shaft of fiery lava 1,000 feet high by 100 in diameter on the top of Mauna Loa, which lasted thirty-five days, and of living there with a lava flow steadily crawling along for weeks in a direct line to their houses. Furniture was packed; the excitement was tremendous. Mr. Coan loves to tell how, just after a day of fasting and prayer, the flow was stopped forever seven miles away.

I gossip with my pencil; the guide is whistling the time away, and the Twins are watching the cauldron below. Grand old Mauna Loa lifts its awful form in the distance, and, across the sea of fire, rises against the sky a torreted castle, thrown up by the subterranean forces. Now for our coffee—then darkness, and a sight of sights!

Friday.—The volcano by daylight is fireworks at noon; after dark it is fireworks at midnight. Wonderful as it is by day, it is by night beyond all description. As the shadows deepened, the lake became of a brilliant vermilion red color. Around the edges it steadily surged and roared, throwing hot spray some seventy feet high; the lava waves angrily dashing into cavernous depths. Three times, nearly the whole lake was in a convulsion, a central fountain playing furiously and agitating every part till we feared an outbreak. Mr. Ferneaux has painted this scene with fine effect, after watching it half one night. It was hard to leave so grand a scene, but at length we sought the way back, and, in spite of guide and lauterns, were lost for half an hour.

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post-office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed at the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work, from all partsof the country, is solicited, and will be done cheaply and well. Estimates will be sent on application.

WITH the November number the twelve page form will be resumed, as usual, and continued until July next.

EDITORIAL CORRESPONDENCE.

JULY, 1880.

Waimea, Hawaii; a plateau 2,500 feet above the sea whose cool air and sweet breezes have refreshed many a traveller, has been for forty-eight years the station of the Rev. Lorenzo Lyone. Its population has diminished from about 2,000 to 200. That of Kobala from 8,000 to 1,200.

Berkshire, Mass., and Waimea, Hawaii are a contrast. A region of rolling green hills, with a people of the strongest character, and a region of grandest mountains, with a rollicking, childish people. But the latitude tells, and blood avnn morn. Wherever the Puritan stock comes, even to plant a "faith'e pure shrine," population and conquent are the logic of its vitality and purpose. So it has been here.

If Monument Mountain could only be turned into a volcano, and Beni Mountain be raised nome ten thoumand feet, and if cocoanuts and bananas would grow on the banks of the Housatonic, I would ask nothiag more of Berkshire County, exeept to stay green throughout the year.

As I never took the full impression of these mountains till I went to Amorica, so I could not take in the full stature of men I have met in America till coming here. Aa I see them now, my old college Professor, Albert Hopkins of Williams', seems to rise above them all in grandeur of manhood and character, and that chiefly because of his great sacrifice of fame to duty. That wonderful eye of his, powerful, yet playful and tender as it followed his boys, is upon them yet. He seemed to bave the reserve force of a volcano. He was from Stockbridge. It is better to have such men than mountains. Berkshire has raised more than one like him who is seen and felt around the world. Alas for these tropical islands; in these garden spots the temper has it all his own way; great wonders of nature, but no great men: no morals because they have no struggle.

What a greeting from the veteran missionary, Father Lyons, as he took me into his arms. He bad come over from the United States on the same ship with my parents in 1832, having endured with them a memorable six months voyage around Cape Horn in a whale ship.

Each visit takes its own tone or color. One is discussion, analysis, seeking for bottom facts; another is a rehensal of the story of past labors, recalling the trials and experience of the heroic age of the mission.

Father Lyons has been agiow over old times. Failing strength has retired him from much active duty; be expecta to give up all pastoral work on bis fiftieth anniversary, year after next. He loves to tell of the great revival ia 1837, when in his presence over 3,000 people stood up in the great thatched church and together declared for the Lord's side. Within a year 000 of these joined the church, and many more later. His field extends for somo nixty miles along the rocky aboree of Hawaii, includlng manypopulous districts hesides Waimea, over which he trudged on fuot, up and down through steep gorges and over ridges, once every three months, where no horse could go, often in perilous places where a slip meant death. Sometimes by canoe, which was less laborious but more dangerous.

CHURCH BUILDING.

He, Fathers Bond and Coan, my father and others, heva a similar story to tell of their first church building. His was 120x54 feet—stone walls with frame roof, thatched. The stones were brought on natives' backn from neighboring hills and gulches, often miles off; heavy timbere were hewed in the mountains, and dragged over terribly rough places wholly by hand, ten or fifteen miles. Getting sticks twelve or fourteen inchen square and sixty or more feet long was accomplished by turning out whole clans under their chiefs. Marsbaled by the missionary they would toil for weeke over the rough slopes and monntain spurs. One day each week would he set aside for limestone, when the congregation would repair to the ocean twelve miles away to dive in deep water for coral stone and bring it to the church. On the day for sand they would go again to the heach, returning with handkerchiefs, bags, shirt-sleeves, trowser's legs, calahashes, etc., filled with sand. This was voluntary, and was during the great revival when the natives turned almost solidly to Christianity. The veterans love to tell of those days of thronged houses and great enthusiasm. Fifty thousand out of a population of eighty thousand were brought into the church.

It was night and day labor for the missionary; meetings from early dawn till late at night; no home life. From 1837 till 1844 the work was incessant. Then, came reaction, backsliding; but the people had become comparatively moral. "Satan was bound," as Father Lyons says. Even smoking, which they loved, was suppressed in many churches and large numbers were dropped for it. He thinks that this discipline was unfortunate; but it was not general.

The means of decent living in these days were scarce and hard to get. Father Bond says that once there were but eight garments in his pariah, of seven thousand souls, and one of them a cotton night cap. They were worn in turn hy men and women till each one had a chance.

Weddings and other occasions were sometimes conical from the effort to appear genteel. Once he married a man who had nothing on but a coat, back nide in front, upside down, with the tails tied around his neck. A shirt in those days was aristocratic My mother tells me of a convert who woked up my father at two o'clock in the morning to ask if it was right for him to pray with a shirt on. It made him so proud no wonder he doubted.

Father Lyons loves to tell of the time when on Sunday morning he could see hosts of school children, each school separate, like a company of soldiers, marching to church in its own uniform of *Kapa*—(a cloth made of *tapa* made from the bark of a tree) of a different color for each company, led by their *Kumu* or teacher. Nobody in those days cared for rain. During a shower the *kapa* uniforms, which would be spoiled by rain, were wrapped up and carried under the arm. Now the Hawaiians are like other costumed people, fair weather saints. The solemn old deacons in my father's church, when it rained, used to wrap up their Sunday suits, and ride home horseback, carrying their clothes nader their arms to keep them dry. Gradually, shirts, trousers, dresses, etc., were introduced. There was a rage for quilts, which the mission ladies taught the women to make; blankets were in great demand. Calashes (an outlandish bonnet) became fashionable among the women. I am reminded of the similar practice of native Negroes and Indians and Chinese when sleeping, to cover up the head with a blanket to the exclusion of fresh air. The love of fresh air is peculiar to civilization.

Church services to-day were interesting; over sixty were present. The patriarch took me by the hand and presented me to the people as his son, as he was my father's friend, with a glowing biographical sketch. The natives were interested in the parallel between the history of the Freedmen and the Israelites. An imposing looking deacon made a speech in reply, followed by the veterns in some touching words. Having heard one or two Negro songs the previous evening, he insisted, after the service, that the people should hear them. So, with the "Hampton Songs," and assisted by a Hawaiian who had on exquisite tenor voice, who could read notes, we gave them "My Lord, what a morning!" "Keep me from sinking down," and the Negro battle hymn, "They look like men of war" and a few others—to the apparent pleasure of the people, who are very ready to be interested, and, unlike the average freedman, have a singular interest in the affairs of other nations and in general news. Perhaps this is from their isolation.

We are at the base of Mauna Kea, which is 15,000 feet in height and rises grandly right in front of us. Beyond stande Mnune Loa, equally high, containing an ocean of molten rock, every now and then making a magnificent illumination from a lava stream which bursts from its side end is thrown far into the air, then rushes to the sea.

The chill of evening where middey is always cool is checked by an iron pot filled with live coals, to which we resort once in a while; it is a qnaint contrivance, but just the thing.

On the 1st of January last the Sunday schools of this Kingdom presented to Mr. Lyone a gift of $1,200, in recognition of his long and loving work in preparing their Song Books. He has composed and translated a great variety of hymns. His best work is now in this line, in which he is without a peer. The Hawaiians have little originality in modern music or poetry. Their ancient ballads or *meles* are a fine literature, full of Homeric simplicity, dignity and power, but have nearly disappeared with the ancient customs and faith.

EDUCATION.

True to the Puritanic idea, education went hand in hand with religion in the work of this mission. The thousands of schools in the early days were taught by selected pupils who conveyed instruction from the missionary to the masses. Father Lyons tells of the three hundred teachers under his care who for three months gathered daily in the church at early dawn and sat all day. With a fair outfit of ideas they would scatter to the people, to return the next year for a fresh supply. How these missionaries worked! Life was then all opportunity. It was in the major key. It is now in the minor key, for the people are wasting away. Teachers once worked for nothing; later, for a small allowance in cloth, no money being in circulation till many years after. A dollar was represented by a yerd of cotton cloth. About the time my father came into office, as Minister of Public Instruction, in 1845, they were paid 12½ cents a day; later, 37½ cents; now, a dollar, and good teachers are scarce, for they can make more in other ways. At Kohala and at Waimea much has been done for the education of Hawnlian girls. They do not lack intellect, but interest in their studies They usually do well till about thirteen years old when they care more for attention than anything else. By law, they cannot marry till they are fourteen. Their parents are eager to have them marry a well-to-do foreigner or rich Chinaman. Studies are neglected, for the host of chances that an attractive Hawaiian girl is sure to have, is enough to turn her head, though few of them are really good. What with Chinese, natives and demoralized foreigners besetting her, and her parents' urging, she seldom gets beyond sixteen in a single state, but seldom gets a progress bonn in an experience of forty years with native girls, commencing with the youngest, my friends here have found many girls of fine parts, but not over half a dozen with the moral quality or instinct of the average white girl. Blood tells terribly against the Hawaiian pilgrim's progress. No matter how early good training may begin, the fatal race thread will appear. It is not uncommon, however, after a harvest of wild oats, for natives of both sexes to settle down to quiet, steady living. But pure lives are too rare to be a ground of hope for the nation.

I believe that a thorough-going effort for Hawaiian girls is worth making. They are the nation's last hope. I would have many boarding-schools, I would make the life very cheerful and merry, fill it with occupation of brain and hand, give them the brightest and best teachers to be had, and enough of them; as it is, teachers are over-worked and worn out. Over-education and lack of practical training is a danger with these weak races. The proper limit of teaching is difficult to settle but is much ignored in the philanthropic work of the day; hence waste of work and disappointment. For the average pupil too much is as bad as too little. In civilized society, a college graduate is regarded as a callow fellow, inclined to conceit; needing a long struggle that he must make among the strong men who have graduated before him, to fit him for life's duties He is but a corporal. The native or Negro college graduate among his people is at once a general, with few or none ahead of or above him, quite as unfit as the white graduate to lead, but at the head. The temptation to abuse power when without gradual fitting for its use is well nigh irresistible, as experience ebows.

Mr. Lyone says that the boys of the Hilo (Mr. Lyman's) boarding-school, after a three years' course in elementary studies and in manual labor, have turned out better than those who went from there to Lahoinaluna for two years' more study. He believes that the most advanced education of the Hawaiiane has been, on the whole, a failure. The men who have stood so far above their people in thought and acuteness have been tempted to use their advantage for personal ends.

Character does not develop as rapidly as mind. School work is devoted to mind, indirectly to morals, and if the latter are benefited it is from the personal quality and influence of the teacher rather than from systematic training. In civilized society, home is the place for moral education. Where there is no home, it should be done at school. Theee end similar people crave just the schooling that the white race has, rather then that which is adopted to their condition. They do not crave what they most need—moral strength. It is hard for them to realize this: they resent any special methods based un race *differentia*. But there are in such races a certain number of youth of exceptional qualities who should have the best advantages, for experimental if for no other reasons. There is need of them as leaders of their people, and as illustrations of what is possible to them. Exceptional talent should have exceptional scope. There are mountains and plains and deserts in the kingdom of Mind as there are in the kingdom of Nature. As in nature, the best and broadest cultivation is on the plain or table land. Genius don't need so much attention as mediocrity. The *average* is the right base of educational operations. The educational problem of these islands is not thought out and worked out as it should be. There is good work in routine methods, but little radical effort for radical difficulties. The brain and heart of the country is in money making. The Hawaiian Board of Education is composed of able and estimable men—each of whom has made a success in his own line of business—but they are not the men to work out a difficult educational problem, which is outside of their training and experience. Legislature here is blind to its responsibilities and incompetent to do what might be done for the nation. Young Hawaii is playing with power, hastening the doom it should strive to avert; while from the highest power in the land comes no example or influence in favor of the sound Christian morality and principle that alone can save the people.

It is sad and curious to watch the drama of this little kingdom with a population of a second-class city, acknowledged in the family of nations, in all the array of civilization; but underneath is the old barbaric sensnousness, resisting the restraints of civilization, which, rather than its forms, are its essential quality.

HILO.

The plain of Waimea, a magnificent field upon which armies could muster, is a cattle and horses' range. We galloped across it on fresh, fleet horses to Mana, whose proprietor is a young native who controls forty miles of sea-coast and owns thousands of cattle; dined pleasantly, and left for Waipio valley, on the beauty of which tourists have lavished untold praises. It is still fine, but the picturesque native life has given place to rice fields and Chinese huts. The valley is a perfect level of green, say half a mile wide by two in length, through which winds a river. On either side and in the near ground rise abruptly, and the ocean beate upon the shore in front. The contrast of quiet sea level and towering mountains is grand. Two nights and a day in the Hamakua district, which rivals Kobala for rich cane fields, gave me the best idea I have had of the process of sugar-making. I inspected five cane mills. The juice, dropping from the heavy 30 inch iron rollers which crush the cane, is first cleaned, then evaporated in buge iron pans containing steam coils, till quite thick, then passed into a vacuum pan, heated, granulated, and dropped into the "centrifugal," and, five minutes after, it is sugar, ready for the market.

The shore a steep bluff from 300 to 400 feet in height, rising out of deep water, down which kegs of sugar are lowered by steam tackle into boats, when winds do not lash the sea too violently; for the waves come rolling in from thousands of miles away. The climate of this region is perfect. I was pleased with the simple home of my friend, the ex-Governor, who plants cane and takes special pains with his laborers. I visited the quarters, which are as plain as any I have seen, but charmingly clean and attractive, with a few sprigs of fern, and pictures from the illustrated papers. The interest in them shown by the employer and his wife was told wonderfully on their valuo to bim, as well as on their condition in every way. He rode with me to Hilo over those well known gulches; a mud march of thirty miles. It is often a distinct and serious struggle for one's horse to get each leg out of the hole into which he puts it. Fording the streams that come foaming down the ravines bes proved fatal to many travelers, but the views are beautiful, especially in rainy weather, when there are waterfalls on every side. One wishes to look three ways at once at delicious bits of scenery—the ocean always rising up on one side like a blue wall, for we were on a spur of Mauna Kea.

We passed the night at Paaubau plataion with old friends, and, in spite of fatigue, talked till midnight over school days, school rations, school discipline, scrapes, and school-boy battles and triumphs in which our red-beaded host was conspicuous.

I am sitting in the upper pinzza of the Rev. Titus Coan's house, looking out upon the view that for twenty years has been one of

my most delightful memories. Beyond is the blue water of Hilo Bay, its waves washing

We have been talking over the Hawaiian situation, decimation and relapse being the points. Like other old soldiers of this field,

those who object to it are the worst of stumbling blocks.

Missionary work has two phases: First,

sixty negroes from San Francisco, waiters, barbers; hoothlacke and laborers, who work for $12 a month besides board and quarters. They are well spoken of. Shortly after ar-

my most delightful memories. Beyond is the blue water of Hilo Bay, its waves washing the shore and making a music brought by the sea breeze to my ears. In the middle distance lies Coconaut island, with its cluster of graceful cocoa palms. It is covered with grass and has a rocky shore interspersed with pretty curves of sand beach where the bathing is delightful in the crystal clear sea. Here families come in their row-boats afternoons to take tea under the cocoanut trees. What a paradise for children! They play in the grass, hop from rock to rock on the shore, climb the trees, or bathe in the little coves like mermaids, and then row home by moonlight. Hilo is a charming town with people enough to make a pleasant society and sustain a foreign church. From the tropical verdure below, one can turn to the summit of Mauna Kea capped with snow. This is the base of all visitation to the volcano, thirty-eight miles distant over a wretched road; parties are constantly going. The woods are familiar with the groans of unpractised riders, for no carriage can be used.

MISSION WORK.

For over forty years Father Coan has been, in effect, Bishop of Hilo and vicinity, having in charge the people along more than 100 miles of seacoast, originally about 15,000, now not over 5,000. There have been some 12,000 connected with his church; at one time there were 5,000. He once baptized 1,500 in a day, sprinkling them with a brush. This was the heroic age of the mission. The people flocked by thousands to hear the gospel, and camped near the church, raising food enough to live on. They went in masses to the mountains for church timber, which they dragged down by hand. They rushed as readily to the bottom of the sea for limestone, and rallied by thousands whenever the bell rang.

They were taught simple, not dogmatic truth. "Have you stolen a jackknife?" "Have you stolen a fish-hook?" and like questions were thundered from the pulpit upon a mass of dusky faces. Some would cry out "Yes," and be told that confession was not enough—he must restore the article.

But moral reconstruction could not be done in a day, or in a generation: it takes many generations, and to-day, forty years later, those people are in the beginning of moral growth. They are sadly weak, but they are far in advance of old time habits. Since 1840, in the most enlightened nations morality has made less *relative* progress than here. A New England man asked me, "How much have the Negroes improved in morality in ten years?" I answered, "How much has New England improved in morale in ten years?" I think the Negro has improved relatively the most. Is absolute or relative progress the right test; what has been done for us, or what we have done for ourselves. Birthright virtues or birthright vices should not count like those that men create by their own choice.

I am told that a member of Mr. Coan's church once traded his wife for a horse. Morally, of course, he was no success; but a native has no adequate conception of marital duties. Where there was no word there was no idea. His language had no word for home, father, mother, husband or wife. Words meaning male and female, with changing prefixes, answer the purpose. The work for these people was not upon a solid foundation built up through centuries, but like building where there is no bed rock. That must has gradually created. It takes centuries.

I have been glancing at Rev. Titus Coan's "Adventures in Patagonia" (just published in New York). In 1837, he spent six months in missionary exploration just previous to coming here. That seems the most hopeless of all people. Trading for tobacco and rum has demoralized them. Their cannibalism is more curable than their drinking ways. Who would not rather have a Sunday-school class of cannibals than of drunkards? Genuine savage life has a certain excuse, and is respectable compared with the horrible mixture made by civilized vices and heathen habits. The lowest men found in the lowest races are demoralized whites.

Men like Father Coan ought to write their biographies. Such lives will not be repeated. Steam, electricity and enterprise have subdued the world. Once, any rowdy sailor or savage chief could molest or eat a missionary with impunity. Now, the guns of a man-of-war are at his call. These veterans have an experience that should not be lost. Their apostolic labors, perils by water, crossing deep gulches in freshets, exposure on the ocean in frail canoes, thirty years of footing it from village to village before the day of roads and horses, and their familiarity with a peculiar people and history and phase of a great Christian effort, are an invaluable experience, and should be recorded.

Mr. Coan has been called the "King of the Volcano," so closely has he watched the goddess "Pele" who presides over that titanic kettle.

We have been talking over the Hawaiian situation, decimation and relapse being the points. Like other old soldiers of this field, he feels the change made in 1863, when the Home Authorities of the American Board of Foreign Missions in Boston, not without some sympathy here, reorganized the mission, the chief change being the putting of native pastors in charge of the branch, and in some cases of the principal churches, as ecclesiastical peers of the old Fathers; meeting them on an equality in associations and in other relations. Although the Hawaiian is a horn orator, yet, from the lack of mental outfit and discipline, the native preacher soon says all he has got to say. From want of practical good sense, he is apt to be wordy and troublesome in council. Morally, he is not on a pinnacle. He is in the midst of loose ideas and people; is subjected, from his own instincts and surroundings, and from the absence of a sound sentiment about him, to a temptation far greater relatively than the missionary, who lives on a higher plane of surroundings. Even after this new birth he is a native still—in blood, impulse and environment. He is converted; he faces in the right direction, but, in virtue of the past, is terribly loaded in his long up-hill struggle. He may stumble and fall, and people to whom a proper life is almost as easy as breathing, may despise him; yet is there not character in such a man who perseveres in the right way? But should not responsibility be carefully and gradually put upon him? If, as a full-fledged clergyman, he has charge of the church collections and misuses them, when as a subordinate he would have less opportunity, is it not partly the fault of those who have put him into too great temptation? Had they been wiser he would have been better.

The democratic or Congregational ideas of the Boston Committee, rather than the judgment of the missionaries, is, I believe, responsible for the present somewhat unsatisfactory relations of native pastors. Had the veterans been kept in charge of their fields, with plenary power over these men just out of barbarism, and used their power to restrain and strengthen them, a better moral tone might exist among the churches. The change was at least a generation too soon. It should have come finally. There seems no doubt of a serious mistake in 1863, when the Rev. Dr. Anderson visited these islands and established a new order of things. It was *the* blunder of the gospel campaign in these islands. The Roman Catholics, who have at least a third of the Hawaiian population on their side, have done differently. They have a central authority; they replace worn out men with new ones from home; they have native helpers always under control. They excel in worldly wisdom: they seem to have their field better in hand than the Protestants, though the tone and standard of the latter are much better. A priest told a friend of mine that they had so far found no natives fit for large discretion. "We have pretty much dropped the natives," said a missionary to me. No Catholic would say that. A part of the old missionaries are yet working with all their might. Planters and business men seldom put *kanakas* (natives) into responsible positions; they are never left entirely to themselves. Now and then one is competent for important duty, but always needs supervision. Often they do well as executives, carrying out orders and managing gangs of men, but with short range of discretion. The Hawaiian has not yet developed into fitness for responsibility. While he is easily *educated*, there is a distinction between that and true growth that in all the weaker races needs more attention than it has had, and is the work of generations; schooling is only a means of growth.

I venture the criticism that the weak point of gospel teachers is, usually, a lack of appreciation of human nature. Moody's power is, I think, one-half in his convictions and one-half in his knowledge of men. Is there not an unexpressed depreciation of worldly wisdom by many of those who preach Christ? Is common sense properly estimated as an ally of theology? Sanctified common sense is the power that will save the world. That "model missionary," the late Bishop Pattison of Melanesia, did not believe that piety and a desire to preach to them were alone sufficient grounds for sending a man to the heathen. I have noticed in missionary literature a minimum of things seen in the light of hard sense and critical analysis, and a maximum of what would encourage the churches and stimulate giving. Truths about every day living among heathen converts are hard to find. Some of the best workers have seen this.

When in sixty years of unexampled efforts, as well as unexampled success, at these islands, mistakes have been made, they need not rush to the house-tops and proclaim it, but learn and apply the lesson. It is so human, so easy and so weak to "pitch into" a great movement that I don't wish to be counted among the pin-prickers or sharpshooters who are quite as ready to hide as to fire, but usually are not worth bothering about. Every great organization being human must be faulty, and wholesome criticism is essential to its health; those who object to it are the worst of stumbling blocks.

Missionary work has two phases: First, persuasion. Idols are forsaken and the worship of the true God is chosen. This the Hawaiian missionaries accomplished in an unprecedented way. Second organization, in order to secure the conditions of living on which character depends, without which morality cannot thrive. This second phase, as Bishop Pattison says, is the difficult one. It can't be done by inspiration alone. The first part is God's; the second is men's. At the crisis of his life, the choice of his supreme end, man succeeds only with Divine aid. But the ordering of life is within the human will. Multitudes of people who are not Christians are respectable, decent and virtuous. In the higher type of men, the struggle is with the selfish rather than with the sensuous nature, with the spirit rather than with the flesh. Their choice is decisive; right living, never very easy to human beings, is comparatively so to them, and follows naturally. But with the lower type the struggle is not so much at the point of choice as along the line of daily life. It is with the flesh rather than with the spirit. I think some such distinctions are important to an understanding of the heathen problem. Enthusiasts read glowing accounts of conversions and marvel at the piety of savages. Inquirers learn of week, inconsistent lives and don't know what it means. Once the papers were full of the salvation of this nation; now what little is said is in a minor key. This people accepted the gospel, but have not lived near enough to it to save them from extinction. There is excuse enough, but the fact remains. Had they lived in a simple, quiet way, out of the commercial focus of the Pacific Ocean, the result might have been different. Under terrible odds, haunted by the genii of superstition and sensuality from the past, which still possess their being, invaded yearly by thousands of rollicking, pleasure seeking sailors; overrun by a horde of low Chinese, now nearly 8,000 in number; infested by a class of bummers from the coast of California who are worse than the Chinese, and in sight of men of prominence and social standing, whose daily lives are a constant contradiction of the morality preached from the pulpit, this little nation—this kindly, winsome, noble race that once so eagerly grasped the gospel salvation, is steadily sinking; and gossip blames the missionary for it all! The people don't realize it. With many uplifting privileges they are being pushed down by force of circumstances which they have not the innate power to resist: piety has been a help but not sufficient. But they play like children; they ride like Centaurs; they gather flowers and deck themselves in garlands, that soon wither like those that wear them.

The Hilo boarding school, opened in 1836 by the Rev. D. B. Lyman, has done a great far-reaching work through its 1,000 graduates to which it is not easy to do justice. It has been felt throughout this group in the teachers and preachers and other useful men upon whom Mr. and Mrs. Lyman have impressed themselves and then sent out to leaven their people. Through the teacher's daily drudgery more than the preacher's weekly eloquence, character is formed and forces set in motion. This school, like Labainaluna, is on a labor basis, and, aside from teachers' salaries, has supported itself from the start. Without this feature it would have done but little for these islands. It has been the best managed of all the higher schools: it has given a sensible course of instruction, including elementary algebra, similar to the Hampton course, with less variety, kept the boys well in hand and saved a large per cent. of its graduates to the side of decency and good work. Being in advanced years, Mr. Lyman has recently resigned the care of the school.

We omit here the description of General Armstrong's visit to the Volcano of Kilauea, as it was printed in the supplement of last month, but continue from that date, July 29th.

The next day I set out alone for Paahala, a big plantation with the biggest mill on the islands. There were some eight miles of old lava flow to cross, then a pleasant country, and, after four hours' riding, 2,000 acres of sugar cane on the rich soil of Kau district. This plantation, like many others, expected to sail on gloriously from the first, but a two years' drought nearly killed it. Rains have fallen, the mill did its first grinding yesterday, and, in a few days, after an expense of over $900,000, the first returns will come. Kau cane, judging from Mr. Whitney's, is superior, and this remote region is likely to produce great wealth from its sugar interests. I met several interesting young Englishmen who had gone into the cane business. They are likely to do well. The manager, Mr. Goodale, I met last in Texas, in the 25th Army, Corps which was sent there just after the surrender of Lee to watch Maximilien's movements in Mexico. This plantation employs in its hoot of laborers about sixty negroes from San Francisco, waiters, herders; boothlacks and laborers, who work for $12 a month besides board and quarters. They are well spoken of. Shortly after arriving one of them said to the manager, "What literary advantages do the company provide?" This is, so far as I know, the only sign of interest shown by plantation workmen on the islands in their own mental improvement. They already have a musical society, screneded the directors a few days ago and made them a speech, and seem to be well satisfied with their treatment and food. The latter is chiefly on fresh beef and flour. One of their number is cook, and they live well; pie is often in their bill of fare. They are of all sorts. One said, to the Manager, "I had sole charge of the silver at the Palace Hotel." The reply was, "You shall have sole charge of a hoe-handle." He took it like a man. One of them has prodigious strength, and often gets through his day's task at 10 o'clock A. M.

Steamer Likelike, Friday P. M.

We are coasting close in on the lee shore of Hawaii, touching often for passengers and freight, much of the latter being the *awa* root from which a nasty liquor is made and used freely by the natives. My horse swam out to the ship, led from a boat, and was hoisted aboard in a sling. A great mountain of lava rock, verdant in spots, rises before us into the clouds, the waves breaking along its bold shore. Every few miles there is a cocoanut grove with native houses, and, as the steamer stops and lowers her boats with freight for the shore, a fleet of nimble canoes darts from the rough landing, laden with cocoanuts, pineapples, oranges, etc., for sale, for which passengers are eager. This coast is very picturesque as we steam along a few hundred yards off. It grows greener and more populated as we go on. There is a pretty church with spire, every few miles, around which houses cluster, peeping out from among trees. Now a recent lava flow blackens the hills; now we are watching caves which the eternal wash of the waves has worn in the cliffs before us. The fringe of white foam at their base is a pretty trimming to the dark mass of rock.

It is pleasant to row ashore with the freight agent for a nearer glimpse of things. We have just left Kealakekua, where I stood before the monument of Capt. Cook who discovered these islands in 1778, and was killed by the natives who had thought him a god—the returned god Lono, who, years before, had sailed away—but when, in a difficulty with the natives, a stone hit him, and he cried out, the natives said, "Gods do not cry," and killed him. The sea is calm as a pond. When rough, these landings are difficult and dangerous.

The prevalence of leprosy among these islands spoils some of the pleasure of travel. When, last evening, I waited supperless at the landing for the steamer that comes at midnight, I concluded to take the risk of a native meal, and so introduced myself at a native's home, and was cordially received in the name of my father. Soon the whole family was in pursuit of a hen, commanded by the head of it who stood on an elevated rock and issued orders to his forces till the fowl was surrounded and captured. In a little while the Hawaiian spread was ready, on the floor covered with fresh mats. The host said a long grace which included a good deal of my history, after which I had a most satisfying meal, the only trouble being that in these houses you never can be sure that there isn't leprosy, cases of which, instead of being collected and isolated as the law directs, are suffered to go at large and spread the terrible disease. The natives call it *moi alii* (king's sickness). They believe that God sends it and that nothing should be done about it.

One sees along this coast, as elsewhere, the changed life of the natives in respect to houses, which are generally of wood, one story, neat looking; but the people live often in the high basement and keep the floor above for show or for visitors. One also is constantly struck with the general use of the English language among them. A great change since I was here. Native passengers, boatmen and whoever you meet are apt to understand what you say in English.

This rugged coast line relents a little at Keauhou, a lovely village off which we lay. I went in the boats to the prettiest place on all the shore. It nestles at the foot of the mountain, is encircled by a cocoanut grove, dotted with frame houses amidst monkey-pod and other trees, and lies in a cove or quiet little harbor, with a smooth beach where the boats land. It is steamer day, and hundreds of people are there from all the region, better dressed than elsewhere, most of them wearing wreaths of flowers or leaves on their hats and about their necks. The women were dressed in gay colors. It was a gala day and the picturesque Hawaiian was in his element. Nearly all speak English. The scene on the beach is lively with color, action and talk, for there are meetings and partings, and dickering and ship's business. There is flirting on one side and wailing on the other. We finally push

LETTERS FROM HAMPTON GRADUATES.

very well. I was very much pleased, and glad when it was over.

Some of my scholars are pretty well advanced; I think that two can enter the middle class.

that I could not earn money enough to pay my way in school

INCIDENTS

LETTERS FROM HAMPTON GRADUATES.

A Superintendent's Testimony. A Pretty Picture. No Easy Work. What he Taught the First Day.

A SUPERINTENDENT'S TESTIMONY.

The graduate teachers who have gone out from Hampton have been very generally well spoken of by the County Superintendents under whom they labor, and report only kind and courteous treatment. Great interest is often shown in their little schools or awakened by them—an interest which is significant, both as an evidence of friendly relations between the races and a means of increasing them. A graduate gives this pleasant witness to his comrade's success as well as his own.

Maryland, *May* 22, 1886.

My Kind Friend:—

I have a full school yet. My school will not close until the 30th of June. The children send their best regards to you. Our examiner called to see me last week, and was very much pleased with the school supplies you have sent me; he also examined the children, and, after he had gotten through, asked me if I knew the cost of the maps. He also asked me who sent them. I told him a benevolent friend from Boston. He said that he did not have another school, white or colored, that he could compare with B.'s or mine. He said the children were better trained than they ever were before. He is very much pleased with the Hampton students. We are the only two in this county; we are trying to hold her up by our work. My school is in a progressive state; the children seem to be in earnest about their work; they show a great ambition for an education, and by your kindness they have been able to attend school regularly. My trustees send their best regards to you. I spent my holidays in Washington. I met with some of the Hampton graduates. It is very warm, and on the little ones in studying. I would like to have home down to Hampton to the Commencement. I think they had a very delightful time.

I hope to hear from you soon.

Respectfully yours, M.

A PRETTY PICTURE.

A friend, whose kindness to Hampton graduates has made some of their schoolhouses very bright, and contributed not a little to the furtherance of good-will and peace, sends us the pretty letter of thanks received from one whose work he has aided,

N. C., *May* 21, 1886.

My Dear Friend:—

I am now seated in a very pleasant school-room, surrounded by a number of little children, as merry as jay-birds. When the bell was rung Monday, I wish you could have seen the little ones flocking to the school-room. It made me happy to see how much interested the children seemed to be, after such a short vacation. I call the school together early in the morning, and the warm part of the day the children are at leisure. I have such a pleasant place for teaching during the summer. The school-house is surrounded with large oak trees; it is a very pleasant yard. I like it here for summer so much better than I did ——, because there is so much more shade and it is so cool. It is so nice for walking exercise, which I never fail to take soon in the morning and late in the evening. I have no pupils in the alphabet class; all are spelling and reading from the chart.

Mr. B., I am doing all I can to instill into the small children the real benefit of a good education. I want them to be intelligent, not come up as their forefathers had to do. This glorious aid that is now on hand, I tell them, will not always be: so they had better take hold while they have the opportunity. Mr. ——, the Sheriff of this district, called in one evening, out of the rain, and he was much delighted with the performance of the children; he thought they read well from the chart, and counted well from the frame, to be so small. Mr. —— said the colored children were ahead of the white children in this district. Also the teacher was better. I showed him the maps, globe, sphere, &c.; he was really excited to see such a well furnished school-room for the colored. The school was never blessed with but one map before I came here. The children are not willing to ever give me up, but I tell them I can't serve them always.

My maps and other things were such a treat to me at my exhibition. I had them hanging all around the stage so nicely. The people appreciated those as much as the speaking. There were as many or more white people out, the day school closed, than colored. The children went through their exercises very well. I was very much pleased, and glad when it was over.

Your grateful friend, M.

NO EASY WORK.

The following letter, sent us by another friend, is a year old, but the writer is still at work, in spite of the discouragement he felt at first. We give it as a truthful picture of one side of the graduate teacher's experience, without which no correct idea of it is possible.

Va., *February* 3, 1879.

Dear Miss H.:—

No doubt before this you have received the card which I wrote you last mail day, but I forgot to acknowledge the receipt of the papers and atlas which I received before your letter, and for which you will please accept my many thanks. I think that the charts which you spoke of will be of great use in my school, as I have a lot of little beginners who are more trouble than you have any idea of. I tell you, Miss H., teaching these ignorant folks as no easy work for anyone, that is, if they do their duty. It is true that I want to see the colored race in a more enlightened condition, but I certainly do not much appreciate the task; though the work is to be done and I guess I had as well be one of the laborers as anyone else. These people here do not appreciate Sabbath School as I thought they would; when I first came here they were very attentive, but that did not last long. They are the most indolent set of people I ever saw. If there is a night meeting anywhere in the neighborhood, there is sure to be a large crowd in attendance; but they will neither be led nor driven in the day. I often tell them that they love darkness better than day because their deeds are evil. I think, Miss H., that a change in life among these heroines is almost impossible, comparatively; for, in regard to any change in their way of worship, they evince, as Curtis says of Pope John, "a spirit of incorrigibility, pertinacity and obduracy." Consequently, I can only look on with disgust.

I shall certainly be very glad to hear from you whenever convenient.

With best wishes to all, I am,

Yours obediently, D.

WHAT HE TAUGHT THE FIRST DAY.

The most significant sentence in the following letter, though meant only for a bit of humor, is the one we have italicized: "*I taught that day by getting boards and making seats out of them.*" The lesson of Go to work and help yourself, is better than a whole university course without it; and Hampton is proud of every graduate or undergraduate who has learned from her to teach it.

——, Co., Va., *Aug.*, 1880.

Miss L.,

Dear Teacher: It has been some time since I have given you or the School any account of my work, in the field that I was sent to cultivate. I came here Jan. 12th, 1880, opened a school on the 13th. I found a very nice school house, 20x20, with five large windows which give a beautiful light over the room, but not a seat nor a sign of a stove in the house. *I taught that day by getting boards and making seats out of them.*

I only had about eight or ten scholars that day. The next day came in full of out my scholars were poorly clad, and I know that they would have suffered dreadfully from the cold. The third day I commenced my work again, I soon found that it was too hard for small children to sit perfectly still all day without fire. As the Trustees had told the patrons of the school that they would not be able to furnish any stove this term, I told the parents that they must get one, for their children would never be able to stand it through the winter. Some said that they were willing to help buy a stove, but that there were others that would not do any thing, and they were not willing to help those that would not help themselves. I told them to get the stove and I would be responsible for it. They went to work and made up the money, and in a week or so they had it. By this time my school was in full operation, numbering about forty. I was still without benches. I called on the clerk of the board, and he said that there was no money, I would have to make out the best I could; I, at last obtained planks and boards enough to seat sixty.

I had a very fine school indeed, I had two splendid classes in grammar, and also in arithmatic. At first I taught Smith's grammar until I was interrupted by the county superintendents prohibiting any text books but those that were specified by the school laws of county. Of course, this change of the series impeded the progress for several days. But at the close of my school, I was able to give satisfaction to all connected with it.

Some of my scholars are pretty well advanced; I think that two can enter the middle class at Hampton without any trouble, and six the junior class. I think that the colored people are doing remarkably well in this part of the country; I was here four years ago, and some of them were living in wretched houses, and since that time have built fine looking ones two stories high, and have furnished their parlors with fine furniture, and some are making preparations to build; some paying for land and getting their homesteads looking like a prospect of life. I should be glad to return next fall and graduate so I may be better prepared for the work that is before me.

Yours truly, W.

SCHOLARSHIP LETTERS.

Written yearly by every student at Hampton to the friends whose contributions of scholarships of $70 per annum, or $210 for the course, meet the estimated expense of a student's schooling, irrespective of board for which each student pays himself, partly by his work.]

FROM A MIDDLER.

The young man who gives the following history of his struggle for an education, being obliged to stay out of school one year to earn money for the next, not only succeeded in doing that, but made such good use of his time in study that he kept close up with the class he left, and on his return passed an examination for the next class.

Hampton, Va., 1880.

Dear Friend:

Having been informed that it is through your benevolence that my tuition is paid, I feel it my duty to write to you to return you thanks for your kindness to me.

It gives me great pleasure to think that I have such a kind friend as you are. Although I have not seen you, neither have you seen me knowingly; yet I deem you my friend.

But before saying anything more about the present, I will now endeavor to give you a sketch of the history of my life from my earliest remembrance up to the present day.

I was born in Prince William Co., Va., 1854, A. D. My mother died when I was a year and two months old. I was born a slave, but did not serve my owners long; for the Proclamation of the Emancipation took place before I was large enough to do much work. After Mother's death I was carried to Grandmother's to be reared. I remained there until her death, after which Grandfather commenced to drink and finally became a drunkard and treated me so mean that I was compelled to run away. I was then about thirteen years old and ever since then I have been paddling my own canoe. I have lived with different families of people, and in different States. I cannot say that I have had such a hard time, for everywhere I lived, I tried to do what was right, so the result was that everybody that I lived with treated me well. I am now 25 years old and have never had any difficulty with any person.

Grandmother taught me to be honest, upright and manly to everybody. The last words that she said to me was that she was afraid I would not be the man she wanted me to be. The reason that she said that was because I came in the room where she was and did not take off my hat. She was very strict with me. I thought hard of it then, but since I have become my own master, I see the benefit of it. I left home in 1867. I then lived with a gentleman, named Mr. ——, one year. The next year I went to another gentleman's and lived with him two years. During this time I had a great desire to learn to read and write. So finally I got myself a spelling-book and every night after my work was done I would study my lessons and Mr. ——, (the gentleman I lived with, would hear them. Sometimes I would take my book in my pocket with me when I went to work, and whenever I got a chance to study I would do it. By so doing I learned to read and write a little, my chance for getting an education has been very dull, for ever since I was 13 years old I have been moving from place to place and have not had any home particularly. In 1876, I went to Lower Providence, Penn., to live with a gentleman. I lived with him 15 months. From him I received a recommendation to the Wayland Institute in D. C. But I did not send my application in time, and the school was full. I next received a recommendation from Mr. R. L. Carne, the Superintendent of Public Schools in Alexandria City and County to this school. I arrived here Dec. 4, 1877, and entered the Preparatory Department. I like the school ever so well. The teachers are kind and take a great deal of pains in teaching us.

After the close of the term, I went home with the intention of coming back, but could not on the account of not having the means to come with. The vacation being short—only three months, and my health being bad so that I could not earn money enough to pay my way in school.

Finding that I could not come to Hampton I thought that I would teach school one term, and earn money enough to pay my way the next term. So I opened a school in Prince William County, Va., on the 7th of Oct., last year, and had much success in that also.

I like teaching very much. I expect to teach after I graduate, for I find that there is a great work for me to do. I arrived here the 11th of Sept. last. I have been quite successful this term so far. I have been promoted from the Preparatory class to the Middle. I hope that I may be able to graduate next term.

I pay a part of my schooling in money, and a part in work.

However, I express my feelings, yet, if I ever succeed in getting an education, I am determined to live out the remainder of my life in teaching which I love so dearly.

Yours respectfully, B.

A YOUNG WOMAN'S EXPERIENCE.

A young woman in the Middle class gives an interesting account of her experiences in slavery times, which very few students now can remember.

Dear Friend:

This is my first term here, and I have been requested by the Principal of the school to write you a few lines, and I take great pleasure in so doing, hoping that I may somewhat interest you. I shall first give you a short sketch of my life and then of my early school days. I was born in Norfolk county in the State of Virginia. My father and mother were both slaves, and they were owned by different parties. I am happy to state that my parents are still living. They had six children, and I was the youngest. We were all born slaves and belonged to the lady that owned our mother. I have learned from my parents that the lady who owned us died intestate, consequently my mother, and her children had to be divided among the different members of the lady's family. This was very grievous to my mother who knew full well that her children would have to be separated from her, and so it was, for my mother and four youngest children were given to the nephew of her mistress, and her two eldest sons to relatives of the family. My mother was blessed with a good husband who hired her from her master, and they lived to themselves very comfortably. My parents were allowed to keep their four youngest children with them and for a while we did not realize that we were slaves, but our happiness did not last long. The young man to whom we belonged felt that he needed a large amount of money and he committed my mother and her four children to jail to be sold. I was then only four years old too young to feel troubled, but I remember how my father and mother grieved, and as I think of it now, I can scarcely refrain from weeping.

In this gloomy hour, God smiled upon us. My father aided by a white gentleman for whom he had worked for several years, bought us for the enormous sum of twenty-five hundred dollars. My father had been quite economical for several years, and he had saved of his hard earnings one thousand dollars, and the remainder of the money he borrowed from the gentleman that befriended him. My father's master was exceedingly kind to him, and in a few years after he purchased his own family, he bought his own freedom. My two elder brothers remained slaves until the late war. My father could read and write, and for that reason he was considered by the slave-holders dangerous but very valuable and he could always obtain profitable employment. He taught his children the alphabet, which was then a great violation of the law.

I shall now give you a short account of my early school days. I well remember the first day I ever went to school: it was during the war, I could read as I thought very well, but my teacher told me that I could pronounce words pretty well but could not read. I could not imagine what she meant. I had never heard of punctuation marks, and I have since concluded that she was perfectly right in saying that I could not read correctly. My teacher was a white lady from the North, and I must say I idolized her. Oh, how I wept when she left our neighborhood to go to her home.

I was an assistant teacher in a school in Norfolk county, for two years. Then the superintendent of the school took quite an interest in my welfare and he recommended me to come to this Institute to improve myself, so I am now a school girl again.

I feel that I shall be amply paid for coming here to school. The teachers are so very kind and they all try hard to make their scholars improve. Words are inadequate to express my gratitude to you for your kindness in assisting and trying to elevate my benighted race. I hope the blessing of God may ever rest upon you and all the good friends at the North.

Yours respectfully, M.

INCIDENTS OF INDIANS LIFE AT HAMPTON.

MAGNANIMITY OF THE NEGRO TOWARD THE INDIAN.

The magnasimoss spirit shown hy the colored studeats toward the Indians at this Institution has been, to say the least, something worthy of praise.

The introduction of fifty or sixty Indians here from the woods, smoag two hundred and fifty colored studeats was an experimeat to be carefully watched. The Negro has shown the same generous spirit toword the Indian as he has toward all races. I think the true test of civilizatioa in any race, is shown hy the desire of that race to assist those whose position is more unfortunate than theirs. I do aot meas to say that the Negro is thoroughly civilized, but I do meas to say that it reflects much credit on his civilizatioa to see him, while he himself is yet strugglieg for a place smoag civilized races, reachieg out his hand to assist a less fortunate race. It shows that though he himself was oppressed, he has become enough enlightened to rise above mere race prejudices in doing his duty toword other men.

I think that the treatment the Indians heve received at this Institution at the hands of the colored studeats is quite a rebuke to many white Institutions both North and South, especially such veneered institutions as West Point, where the sons of the so called civilized parents refuse to associate with a colored boy.

It is not difficult to imagine the result had fifty or sixty Indian or *colored* students been ashered all at once into one of the averags white institutions of this country.

Many instances could be given to show that the general feeling toward the Indian is of the best kind.

It was gratifying when visiting one of the debating clubs last winter to see that the colored students had elected an Indian as secretary. Many of the colored students have volunteered to take them as room mates that they might in that way teach them English. When an Indian girl leaves this school she receives as many warm hand shakes as any other student, and her departure is as much regretted by the colored girls as if she was one of their own color.

It seems a little strange, yet it is a fact, that it was only a few Sundays ago that an Indian and a colored student went calling together on lady friends in Hampton. The colored student told me that his manners were excellent and that he liked to call with him.

The introduction of the Indian here will at least show that the colored man has learned enough to know that it is his duty to help the unfortunate wherever he finds them, whether clothed in black, white, or red skins.

GENERAL IMPROVEMENT.

As the Indians are watched from month to month a general improvement is apperent. They begin to take more interest in work as they see that it is only meant to beacfit them.

There is an increasing desire to learn trades. Those who are learning are doing well, only a few have to be told to go to work in the morning. The teacher in charge of the squads at Shellbanks reports that they do better work every day. They are growing more careful in their dress. There was never any great trouble in getting them to wear proper outside clothing. Many of them are a good while learning that their under garments must be kept clean and frequently changed. Some of them have made great improvement in this particular while others would rather go without under clothing and spend their money for trifles, if they are not watched. With their long hair once off no more trouble is experienced, they voluntarily keep their own hair cut nicely. One or two of them act as barbers to the others. I have noticed recently that some of them are beginning to shave—a strange thing for an Indian.

The majority of them take great pride in keeping neat rooms, floors are scrubbed every two weeks and in some cases every week; pictures and other ornaments are tastefully hung around the room. To enter some of their rooms one would not think he was in a student's room.

A higher sense of honesty is gradually being spread among them. Cases of dishonesty are gradually decreasing as they begin to understand what it is to be honest.

A general improvement in their manners is noticeable. A "good morning" and a "good evening" are taking the place of a low grunt. The broad, gruff "no" and "yes" are being exchanged for a polite "no sir" and "yes sir."

The following extracts are made from two boys' letters written to their friends telling them what they are doing here: "I am doing well here at this time and I am glad to tell you how I learn. When I came here I was very glad to go to school in morning and afternoon I work. Now I want to do this way alway and when I go back home I want to teach the other Indian People. That way I think sad try hard and study English words but English word very hard words, but I try always and now I know some English word, and I want to know more English word, when first I came here I don't know any English word, but I try hard and study hard, and now I know some, and when I go back home I will tell the other Indian people because our Indians don't know how to live good."

Another writes:

"I thought I would write to tell you how I got along here. Indian boys and girls getting along very well and they learn English and great many other things since they came here, some work on the farm and some work in the shop and some work in the Sawmill. Before I came here I did not know nothing and I expect to go home in three years and if I can Teach the Indians at my home I will try. I will be very glad to teach them if I can, I can not say that I will teach them but I say I will try to and I expect to do some kind of Business when I get *home*."

GIRLS.

One of the ladies who assists in taking care of the girls speaks of them as follows:

"When school was in session our Indian girls numbered twenty-one; but when the time came for all to put aside their hooks for a while, eight of them had their friends good-by,—not to return to their homes nor spend the summer with their friends as many of the teachers and colored students do: they left to spend their vacation North as helpers in strange families.

"Soon after the departure of the eight girls, three of the remaining ones were sent to their Western homes. Since then two bright girls, Julia St. Cyr and Sophia Little Bear, from the Industrial School in Nebraska, have been added. Both of them can speak the English language very readily. The older one, Julia St. Cyr, was organist in the Industrial School until she came here. No Indian girl has ever been able to enter the Preparatory class, but Julia, I think, can enter the Junior class.

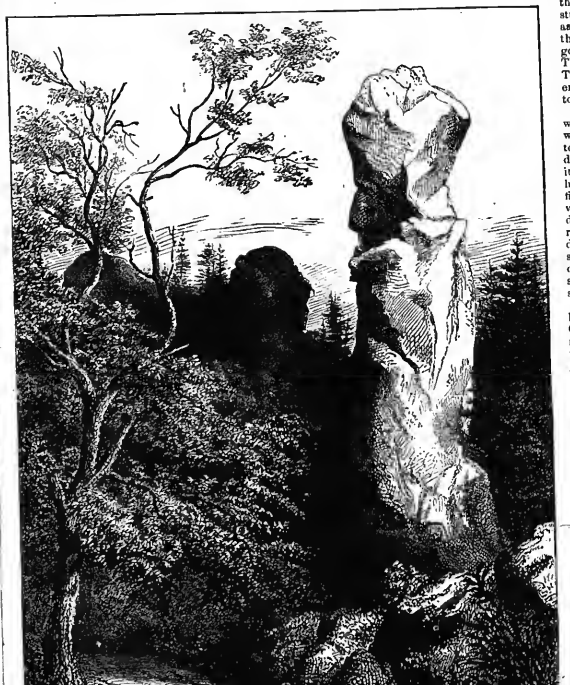
"As soon as possible after the close of school the girls had their summer work assigned them. Two were made assistant cooks, one a waitress and the others helpers in the students' diningroom. They do their work comparatively well, and are learning rapidly the many little things necessary to good house keeping.

"Monday, Tuesday and Wednesday mornings all the girls and the last three boys that came, have had object lessons given them from nine to ten o'clock. It was thought best that they should be kept in school only one hour as the weather was so very warm. Thursdays and Fridays are their washing and ironing days.

"Some of the girls show a good deal of taste in arranging things and are very particular how they carry themselves. Any allusion to their former condition throws a gloom over their feelings. They do not like to be questioned at all by strangers.

"There have been a great many excursionists here this summer and of course all of them had to see the Indians. At first the girls did not mind them very much; but they came in such bodies, crowded around them in such numbers and asked so many absurd questions that they soon got tired and would hide when they heard them coming. When these people succeeded in beaming in a poor girl they would begin to ask such questions as these: 'What is your name?' 'Are you wild?' 'Can you speak English?' 'Do you live in a house or home.'

"One day when a crowd got around one of the girls, she thought she would let them see how they would feel in her position. So when they began. Are you wild? she said, 'yes, very wild; are you wild?' Another time when she was asked if she could speak English, she replied, 'No I can not speak a word of English.'"



THE GARDEN OF THE GODS.

Our Indian girls are doing well in their Northern homes. In a few weeks they will return to resume their studies. There is no doubt but that, when they get back, those who have remained will feel their deficiencies and exert themselves to do as well as their friends.

The following is a letter written by little Sarah Walker in her summer home in Massachusetts.

"PITTSFIELD, MASS., *August*, 1880.

"*Dear Mrs.* ——: I will anawer your letter now I don't know why I didnt enswer your letter before I want go back to Hampton and go to school. I am not home sick now I heve very nice time over here. I want to see you all very much I am glad that the girls have been well. Are they any more Indian girls gone home? I hope my sister will come, pleas give my love to Annia Lyman and Mary Hiamon. O Mrs —— I very nice time picnic all the boys and girls came there but Kawhnt and George Bush Otter did not come. I was very gled to see all the boys and girls I thank you very much for the stamps that you give me. Carris and I we go to church every sunday and also to sunday-school. I wash the dishes every day and sweep the kitchen and do my washing and ironing, Mrs. Foot, give me a nice dress. your friend,

"SARAH WALKER."

READING ROOM.

A reading room has recently been opened in the boys' quarters. Most of the leading newspapers in English, and all the papers printed in their language are kept here for them. The papers are assorted and nicely arranged every morning by one of the boys. One seldom enters the room without finding some of the boys with a paper. As they get more enlightened their desire for general reading is increased. They have a special fondness for papers printed in their own language:

IN SCHOOL.

This first of September brought the close of vacation for the Indians who spent their vacation here. There are few students who have done more faithful and willing work this summer than these Indians. It has fitted them for good study during the next term. They were anxious to get in school. They say that their three years here are shortening very fast and they want to get all they can while here.

For the month of September, they were all taught by one teacher, and it was quite a question how one could teach twenty-five or thirty Indians of different grades. On visiting the recitation room I saw that this problem had been pleasantly solved. When I first entered I heard such a buzz of voices that I thought there must be disorder in the room. Looking around I found that the teacher had divided them into four or five divisions with an Indian teacher for each division. I don't know when I have seen more lively work being done in a school room.

The teachers did not seem in the least embarrassed by being visited. One of the girls was going over the multiplication table with her class; while some of the other classes were going over the capitals of the middle states. The teachers seemed very proud of their positions and tried to assume the air of veterans. The scholars seemed equally proud and much interested in being taught by one of their own number. When they had gone over their lessons in this way several times their teacher had the teachers and all recite before him. He said their recitations generally showed that the work of his subordinates had been well done. They were much elated when their teacher told them that they were having a normal school.

My first impression of Indians as school teachers was a very pleasant one.

B. T. W.

In noticing an article in our July number disclaiming the possibility of any rivalry between the schools of Hampton and Carlisle, the editor of "*Eadle Keatoh Toh*," sends us the following wise and kindly words:

"There may be the slightest provoking of one another to good works between us and our friends in the work at Hampton. Whatever of success there is in either the one or the other, encourages and unites us upon the broad basis of education and industrial training for all Indian children. Then shall the days of rest from wars with our Indians come. Then shall the days of their citizenship come; of their peace, of their prosperity and wealth, for themselves and the country, because them, and not till then, will they become tax-payers instead of consumers of the taxes paid by others.

"Groping in darkness, ignorance savagery, they will go on aimlessly forever unless we as a people fulfill our mission and give them the light. No! Hampton and Carlisle are not jealous of each other. We push on together—hand in hand with agency schools, mission schools, and all other schools however strong, however weak, —striving to educate, civilize, humanize, or in any way train or influence the Indians toward this spirit of intelligence and self-help. We are joined too, hand in hand with the agents struggling with perplexing responsibilities, toward this same object. With his farmer, his blacksmith, his carpenter and all his helpers of every sort who with honesty and with zeal, and energy, work toward this end."

"General Armstrong and Hampton Institute need no word of praise from us. But we may say we can never forget, that when a little wealth and population. Southern men do not read Northern papers, or, if they do so occasionally, they do not believe them. What the

they go out to fight and B is killed; A by the Code becomes a sort of hero, and what can we do but smile at the absurdity of claiming as

branch to some coal mine" is the thought that passes through the mind, but you soon find that it is the main line, which, unable to

climb or pierce the mountain, standing in its

"General Armstrong and Hampton Institute need no word of praise from us. But we may say we can never forget, that when a little party of young men with red skins, who had been sick and ie prison, coedemned and hated by the masses, were seeking the light and the way to become men, the walls of Hampton Institute were opened to them: that there they were taken by the hand and led forward to accomplish their hopes; that there they were treated and trained as men and brothers. Hampton had the courage to do this, and from this has grown Hampton's and Carlisle's Indian work.

"The Government should give every Indian child the privileges of education as it has promised to do in many treaties, and whosoever will work in any way towards this object, however strong or weak, we are with them."

A STEP IN ADVANCE.

The Baltimore *Sun* is doing some startling and radical work. It has sent into New England, an able correspondent to spy out the land, its by-ways, nooks and corners. This correspondent is no commoe reporter, looking after facts to support some politicel theory, and always under fear of the proprietor's lash, if he lets in anything which might cripple the theory. He is in the line of the new departure in journalism, tha recordiog of facts regardless of their bearings. Ha is telling Southern peopla what tha New Englanders really are at homa, and he is evidently much surprised at tha wealth and comfort of the Yankees. More than all, he will be believed by his Southern readers, though they would summarily reject it if set forth in any Northern paper. Nearly every mnn believes in his own favorite or local paper, just as he believes in his lawyer or doctor: its opinions become his opinions, and its statements, his statements.

Where onc grown up business mnn reads a books, more than ona hundred read newspapers, and get out of them a loose-jointed education in general nffairs. It is therefore, much easier to inform them through the press than through books. The newspapers and not the books ara the most powerful educators As the bittar war feeling dies out, the people of the two sections are becoming neighborly and begin to look at each other through the parlor and kitchen windows. It requires, now, something of an effort to spit out "Ku Klux," "tyrnnt," "rebel," "monster of oppression." But in the way of looking at each other, and gossiping in a friendly way, there is a growing disposition to spend time and money. It is not by census reports, or statistical atlases that communities come to know each other, but by personal contact. "Travel maketh a full man," and a writer of travels should always he of the best order of men.

Provincialism is a fault of the South, as it ie the fault of the world in general, excepting the spots where men crowd together. Tha railways of the North have thinned it out somewhat thera. Isolata n town, and it becomes at once self-sufficient, and puts up a trumpet in the public common, at which every citizen takes his turn at blowing. Travel and easy transportation keep down provincialism, just as sheep keep down weeds.

The advantage of rail-roads is, that they level physically and morally, and generally they level up. They mako people homogenous, just as paper petterns make tha girls of the Sierras and of Newport dress alike. Where railroads cnn not do tha work, the press must. Tha Yankee goes to London and Paris, and stops talking about New York and Boston. The Virginian goes to New York and Philadelphia and becomes silant over the arid wastes and sloth of his native Stata. It has taken three hundred years for Englishmen and tha Frenchmen to understand each other slightly. Evan now, they entertain tha most foolish opinions about each other, with n result of bad feeling and bad legislation. It is only lately that English writers have ventured to inform their readars confidently that the gallic race, which surpasses every European race in culture, wealth, and industrial cunning, is not a race of vile, frog-eating, immoral, frivolons apes. It is now evidont that tha growing liberality of sentiment on the part of readers, induces the press to show asterprise in looking up the social life of other communities. Tha ignorance which the North and South exhibit about each other is not only wrong, but inaxcuseble. It did vast harm in the past, and made terrible hnvoc with lifa and property. Ignornnce is the mother of blunders and crime. We have repeatedly, in this paper protested against tha disposition on the part of some Northern papers to reject all evidence but that which sustaies n theory. Thera is already n change for the better, owing to more sober judgments. Still many of these papers sigh in n quiet way for tha flesh pots of outrages. The Southern journals hava been quite disposed to ignore the interior and non-political life of Northern people, though it is really n matter of supreme importance that they should throughly understand the habits, character, and social lifa of those people who will control for some time to come tha national life, by the sheer force of wealth and population. Southern men do not read Northern papers, or, if they do so occasioeelly, they do not believe them. What the Southerner needs to know is the details of that quiet, social life, which makes up Northern character, whether it be good or had. So far he believes only what his own paper tells him. Southern men are even now rather too profuse in their admiration of Yankee enterprise, but it never occure to them to fied out the causes of those strong elements which have drawn from an almost sterile spot, the leaders in an emigration which has populated the northern tier of states between the two oceans, with a restless, industrious, intelligent population.

The Southern press is given up unreservedly to politics. Even the Charleston *News and Courier*, circulatieg largely among the planters, discontinued its agriculturel column because the "planters took no interest ie it." But the movement of the Baltimore *Sun* will be imitated by the rest of the Southern press, and whatever is good, whatever is worth following, in Yankee civilization will be presented in the true light, before Southern readers, by men whom they trust.

W. N. A.

THE CODE OF HONOR.

Tha feudal system, though dead, has laft a trail behind it—more plainly marked in soma sections than in others; but visibla everywhere feudalism flourished, and in those newer countries, settled by emigrents from lands, where existed that strange mixture of vice and virtue known as chivalry. Probably the most distinct fasture of this system now visible, is what used to be called, and is called even now "the Code of Honor," orin plainer languege, the custom of duelling.

A discussion of this question would seem almost useless in this last quarter of the nineteenth century, yet here and there we find supporters of the custom, who lead youth astray by inculcating false notions of what they call "honor," etc.

The "Code of Honor" is simply a system of rules and regulations prescribing in what manuer A shall go to work to premeditate the murder of B, and effect it if possible, by giving B a chance to premeditate and effect his (A's) murder. Looking at the Code from this standpoint, with all its feathere plucked, it seems incredible that sane men can be found to endorso it. Nevertheless it is idle to deny that some people do uphold the system, and look with admiration on a man who has killed his fellow-being in n duel, or who in attempting murder, has himself been crippled. If it be impossihle to change the sentiments of those who now believe in duelling, it is tha duty of journals, especially educational ones, to present the other side of the questioe, that in each succeeding generation there may be fewer and fewer admirers of tha so-called field of honor.

It is claimed by the upholders of the system, that in places where the "Code" is recognized, there is n higher tone found in society, and a greater amount of courtesy prevails. This claim is groundless—if it be true, let us see what else must be true. Duelling is against the law, and where it is the custom to break the laws rather than to obey them, tha state of that society is lawless. Where every mnn is a law to himself and his own avenger, why have any laws? Why not own up to savagery at once? Among barbariane there is no law, but that of might—and we hardly call tha tone of barbarians "high." Yet the upholders of duelling are forced to maintain, either that duels are lawful, (which they know to be false) or else that law breaking is a high-toned and proper thing.

Looked at, without prejudice, tha Code of Honor is only old Draco's code polished up a little. Drsco declared tha smallest offense deserved death, and that he knew no severer punishment for graver offenses. Duelling takes exactly the same ground for a trivial matter as a serious ona, tha remedy provided is the same: a chance to be killed and to kill.

Taking the law into our own hande is not much of a compliment to the bench of our State. To put it mildly—duellists cast n slur on the sagacity of judges and the efficacy of courts. To say that a pistol at ten paces, is more certain to right a wrong than n judga learned in tha law, is not very complimentary to the judga, and seems n little at variance with the elaim, that duelling increases courtesy. Again the fairness of duels, which their supporters praise highly, is purely imaginary. The blackest hearted villain on the footstool, if he hava social veneer sufficient to pass for a nominal gentleman, may be the most expert ewordsman or pistol shot, while the best and bravest mcn living may be inexpert at arms. If A, who can drive nails with his pistol at ten paces, and B, who cannot hit a barn door, stand up to shoot at one another, it is simply "bosh" to say their chances are equal. Before a court, both would be equal—how then does this comparison seem of the fairness of the courts nnd Code? The claim for tha fairness of duelling then seems without foundation; but its unfairness is as clear as noon-day. Suppose A grievously insults and injures B,—they go out to fight and B is killed; A by the Code becomes a sort of hero, and what can we do but smile at the absurdity of claiming as just a system, whereby a miscreant by doubling his misdeeds may become crowned with a double chaplet, and dubbed "a man of courage and of honor."

It is useless to deny that when men go out to fight a duel, they intend to do bodily narm. People in their right minds do not stand up as a target for other's pistol practice. What damage is done is premeditoted. There is not even "the heat of passion" to be offercd in excuse. On being insulted, ninety men out of hundred will retaliate with a blow or a scries of blows, and nine tenths of the people on this planet will say "well done." But a duel is deliberate, formal, and cold blooded. Between the affront and the fight a coesiderable interval must elapse, and more or less ink be spilled. No greater evidence of premeditation can be asked than the appearance of the principals and seconds on the field. For what other purpose are they there than to injure one enother aed to oid and abet the injury.

It seem to me that any man, who fights a duel hopes to obtain some advantage over the man with whom he fights. If not, why do they stand ten or fifty paces apart? If both men are willing to die for what they believe to be the right side of the question at issue, why not place tha rifles over each others hearts and have the seconds pull the triggers. This process would settle the question of bravery at once, and put both on an even footing. Another great advantage would be the certainty that both parties would have complete satisfaction. If heart to heart is claimed to be absurd, then let them stand a mile apart and fire with pop-guns when one of the seconds, chosen by lot, blows a fish-horn. One plan is as rational as the other, if *each party does not stand up with the hope of getting some advantage over his opponent.* It is idle to say that a man's honor needs a certain number of feet in which to be blood-washed.

A duel is looked upon by the upholders of the system as a means to right a wroeg; but herein is a glaring absurdity, for the injured party runs the same risk of barm as the one who has done the injury. Suppose a man stole my horse, and a court should determine to try us both for theft and send us to prison; would there not be something absurd in such a mode of procedure?

Leaving entirely aside tha moral aspect of a duel, it is the most illogical way to settle any difference. If a man insult you and you offer him a first-class chance to shoot you besides, tha depth of absurdity seems to be touched.

In communities where duelling is practised it requires a good deal more courage not to fight n duel then to fight one; and among those whose honor is most unimpeachable, is heard the least talk about "Honor" or its "Code."

T. T. n.

NOTES OF A WESTERN TRIP.

Away from Hampton, and off for Dakota. Cause, the necessity of returning some Indian students to their homes in that distant part of the country. The "Bay Lina" steamers furnished transportation for the party of five to Baltimore, and from that place to Yankton, Dakota, it was supplied by the Northern Central Railroad of Pennsylvania, and its connections,—the Pennsylvnnia, Pittsburg Fort Wayne and Chicago, and the Chicago, Milwaukee and St. Paul railways. Leaving Baltimore at 8.15 a. m., we were at Harrisburg, Pa., in time for dinner, nnd at 1 p. m. turned our faces westward, and were soon swiftly climbing the eastern slope of the Alleghanies, nnd gazing upon tha lovely views, visible from our seata in the open car attached to the rear of our train. It was the "Fast Express," that runs between Harrisburg and Pittsburg, and the schedule time from Washington to Chicago (842 miles) was twenty-four hours and fifty-five minutes, a fraction over thirty-four miles per hour, including stoppages. It is scarcely necessary to describe tha scenery of the mountains,—it has had the benefit of more facile pens and its praises can be found registered in every guide book. I do not think, however, that it equals in ruggedness and wildness, that found along the Baltimore and Ohio railway, though tha engineering difficulties to be overcome would seem to have been greater, unless we consider the frequent tunnels of the B. and O. more difficult than the sharp curves and gradients of the Pennsylvania. Still one could not well fail to admire the skill with which difficulties had been overcome, and the grand horse shoa curve, between Altoona and Summit, was a surprise, and could well be used to point a moral, showing to the young man or woman how difficulties that could neither be pierced nor surmounted, could be passed around. Before reaching it, the road gradually rises above the level of tha valley which ie seen on the left, nnd seems to be leading straight into tha heart of tha mountains. But soon, not far away to the left, is seen a track scurped out of the mountain's side and with a sharp grade which soon passes round the shoulder of the etcep and is lost to view. "A branch to some cool nine" is the thought that passes through the mind, but you soon find that it is the main line, which, unable to climb or pierce the mountain standing in its front, "fseks" the difficulty and passieg around its steep face and looking down hundreds of feet into the valley below, again turns westward and goes on to climb other steeps, and look down upon other scenes, till a long tunnel shuts all from sight, and emerging from it one sees the sign "summit" in the front of the station; and next, stresme whose waters are hastening toward the Ohio and the Gulf. Cresson, one of the first stution on the western slope, is a summer resort, nnd as hurriedly seen from the train, seemed a really beautiful spot. Coke ovees with their canopies of smoke and flame line a portion of the way, sed often so close to the track that the heat reaches the face of the traveller, as he gazes curiously from the wiedow of the car.

"Smoky Pittsburg" was reached soon after dark, and stopping only long enoegh for supper, the night's journey took us across Ohio and nearly across Indiana, and we took breakfast at Valparaiso, near the western line of the State and forty-two miles from Chicago. "What's in a name!" Why any one ever thought to call this low, flat lying town and surrounding country, "the vale of Paradise," is left for some wiser person than the writer to discern. Leaving the station after paying its rapacious proprietor first class rates for a seventh rate meal, our engineer lost no time, at least, in putting the miles behind him, and a careful noting of the rate of speed showed that miles were seen at the rate of one minute and four seconds, one minute and six, one and seven, one and five, and the forty-two, with four stops, and the necessary "slowing down" within city limits were passed over in fifty-seven minutes.

We reached the city Sunday morning, and remained there during the day. Soon after our arrival a heavy rain commenced falling, and continuing during the day, rendered it too unpleasant to go about any, and the Indians passed most of the time looking from the windows of the hotel, upon the streets and the never ending lines of street cars which, at the least detention from any cause, filled the tracks for squares.

At nine p. m., we took the cars of the Chicago, Milwaukee and St. Paul railroad, and at midnight were in Milwaukee, and at breakfast time the next morning were at Prairie du Chien, Wisconsin, at which point we crossed the Mississippi on a temporary bridge and passing, by a steep grade, up the valley of a crooked and turbulent little stream, emerged into the prairie country of Iowa. "Westward, ho!" and (as Artemus Ward would have said,) "we hoed," all the bright and seemingly interminable day, at first through the older settled portions of the State, then through vast stretches of level or slightly rolling prairie, with but few and widely separated houses, but with hard after herd of cattle, feeding under the care of herders, sometimes grown men, but more frequently boys of from ten to fifteen years of age, and several time we saw girls galloping about on their ponies, engaged in the same duty.

The train ran very slowly, and at almost every branch road we had to change cars, and when at 7:30 a. m. of Tuesday we reached Running Water on the Missouri river, fifty miles by water above the town of Yankton, we had changed five time since leaving Chicago and three of the changes had been made in the night.

Running Water is opposite the mouth of the Niobrara river, which forms the boundary line between Nebraska and that portion of Dakota lying west of the Missouri river, and has attained the dignified age of four months. It is the present terminus of the western branch of the Chicago, Wilwaukee and St. Paul railway. Perhaps I had better say it *was then* the terminus, for western railroads, like the prophets gourd, grow rapidly, and the terminus of today may easily be only the way station of tomorrow. At the time of my visit, a large ferry boat was plying from bank to bank of "the Big Muddy" on the Missouri is factiously but appropriately called, and a party of engineers were already far up the valley of the Niobrara, extending tha line to connect with the Union Pacific at or near Cheyenne, Wyoming Ter. Two hotels are ready to take in (please note the expression) the traveller, and a very readable paper sounds to the whole country (as we are assured by its editor,) tha prises of Running Water and its adjacent prairie.

We were about twenty-seven miles from Yankton Agency, and after waiting a day, and telegrapliing to Yankton and Sioux City for information about steamers for points up the river, I determined to try land transportation, for the trip to the Agency, and on the morning following our arrival we left the mushroom town, at an early hour, and after a pleasant drive of five hours, were set down at the door of the Agent's office at Yankton Agency.

A description of it; the improvement noticed among the Indians, and the incidents of the return trip will form the subject of another letter.

Henry Romeyn.

THE FIRST PIPE. all other wnys. We must take their word for I dedicata mys-lf anew to the work of God, of the Gospel of Christ, and of the salvation of my

(Continued from page 101.)

off to the ship; they to the countless mules, horses and donkeys that ara tethered in the background. Another lsading in half an hour at Kailua, where the first missionaries landed in 1819, to hear that "The old king is dead and the idols are burned"—the most glorious greeting that ever apostles received. At midnight we dropped aachor at Kawaihao and lay quietly till morning for mails, freight and passengers. Going ashors for a change, we saw the great *heiau* or heathen temple, on which human victims were offered, as many as eighty-eight at once. When partly decomposed they were carried to a flat rock in the sea below, whers they were devoured by sharks. Here lived the great Kamehameha, the conqueror of this group, who kept his armies on the heights above and his war canoes in the bay below. He is said to have roasted his own cousin, a prominent rival chief, on a rock near his home.

Steamer traveling is pleasant along such an interesting shore as this, but has its disadvantages when eahin passengers sleep on rows of mattresses which cover nearly every foot of the after deck. A bath is but a blissful dream; but whatever agony there is is soon over, and going with the wind as we do, it is very comfortable. I have completed the circuit of Hawaii, which contains 4,000 square miles, riding more than half way around and coasting the rest of the way. As we steam away I take a parting look at its majestic mountains, and wonder if fato will ever take me back to traverse again their rough paths.

S. C. A.

THE WATER MILL.

Listen to the Water Mill.
Through the livelong day—
How the clicking of the wheel
Wears the weary hours away.
Languidly the Autumn wind
Stirs the withered leaves;
On the field the reapers sing,
Bidding up the sheaves;
And a proverb haunts my mind,
And as a spell is cast:
"The mill will never grind
With the water that is past."

Summer winds revive no more
Leaves strewn o'er earth and main,
And the sickle never can reap
The gathered grain again:
And the rippling stream flows on,
Tranquil, deep and still—
Never gliding back again
To the Water Mill.
Truly speaks the proverb old,
With a meaning vast:
"The mill will never grind
With the water that is past."

Take the lesson to thyself,
Loving heart and true.
Golden years are fleeting by—
Youth is passing, too.
Learn to make the most of life;
Lose no happy days!
Time will ne'er return again,
Sweet chances thrown away;
Leave no tender word unsaid—
But love while love shall last:
"The mill will never grind
With the water that is past."

Work while yet the sun doth shine,
Man of strength and will!
Never does the streamlet glide
Useless by the mill.
Wait not until tomorrow's sun
Beams brightly on thy way;
All that thou canst call thine own
Lies in the phrase "To day!"
Power, intellect, and blooming health
May not, will not, always last:
"The mill will never grind
With the water that is past."

Oh! the wasted hours of life
That have swiftly drifted by;
Oh! the good we might have done!
Gone! lost without a sigh!
Love that we might once have saved
By a single kindly word;
Thoughts conceived, but ne'er express'd
Perishing unpenn'd, unheard.
Take the proverb to thy soul!
Take and clasp it fast:
"The mill will never grind
With the water that is past."

I have thus endeavored quietly
A serious lesson to impart;
Oh! pass it not o'er lightly
But bind it to thine heart:
And when the flight of life is o'er,
And earth recedes from view,
And heaven in all its glory shines
Midst the good, the pure, the true—
Then you'll understand more clearly
The proverb deep and vast:
"The mill will never grind
With the water that is past."

Maj. Gen'l. D. C. McCollam.

HIS FIRST PIPE.

Well, young America, you make a first rate model for the artist's clever brush. He has caught you on the sly, making your first staad for manly independence, hidden away in the barn. So let's take a look at you in spite of yourself. A merry little face lighted up by the kindling match, watchful eyes full of roguish excitement, half fun, half fear. Something like Whittier's immortal "Barefoot"—

"With the sunshine on his face,
Through his torn brim a jaunty grace." But you're no barefoot boy just at present. We see those boots—and their bold stride. Your first pair, probably, as well as your first pipe. Yes sir, you look very fine. But—oh dear—what will the picture be an hour from now? And you won't dare to go to your mother, you know, and you'll wish you were dead—or you'll be quite sure you're going to die.

Well—you won't think so just then—but some things are worth a little misery, or even a good deal. The only question is, does it pay to learn to smoke? If your big brother should tell you, as I hope he would, or if the doctor should tell you, as I feel sure he would, that smoking doesn't pay, what would you say? Suppose he told you that your stomach knows best what is good for boys, and if you insult it will take it out on your brain and hurt its chance of winning you the medal and the prizes at school; and on your heart and set it thumping away all out of time and tune—and spoil those white teeth of yours, and your sweet breath, and weaken your throat and your lungs? What would you say to all that? You'd think it over a little, if you're as much of a man as I take you for. All that, tobacco can do, and has done. But there's one bad thing it *will* do for you, sure as fate. Burn up pennies and dimes and dollars that would make a pretty little pile is you put them into the Savings Bank instead. And, as for manly independence—that's all stuff, you know—or I suppose you don't know. There is no greater slave than the slave to the pipe. A pretty master for you, isn't it—a smoky, smelly old pipe? Pah!—throw it away, and show your independence!

THE GARDEN OF THE GODS.

BY ELIZA OREATOREX.

The world has so long been in the habit of peopling mountains, streams, forests and oceans with imaginary deities, that it is not surprising that even in America we have some of these old ideas. Mr. William Cullen Bryant, in one of his charming poems, speaks of ant, in one of his charming poems, speaks of these as "faded fancies of an elder world." But they are not so faded, after all, and come very naturally to those who have read stories of Greek and Roman gods and heroes.

It is hard for us, who live in these days of railroads, steamboats, telegraphs, hard work and practical life, to see how it was ever possible for any people to hold such simple and childish beliefs. But, though we have learned of the true and only God who made heaven and earth and all that is therein, we like to keep alive the curious old traditions of the ancients. They are like the charming fairy tales that have come down to us from generation to generation. Nobody pretends that they are true; but they are very good "make-believes."

If ever there was a place on earth where the gods of the Greeks and Romans may be supposed to have lived and had a good time, that place must have been in Colorado. Near the foot of the famous mountain known as Pike's Peak lies the "Garden of the Gods," a glimpse of which is given you in our frontispiece. It is a small valley, just on the edge of the Rocky Mountains, and is completely surrounded by a high perpendicular wall of white sandstone. There are two entrances through this wonderful wall; one of them—the larger—is called "The Beautiful Gate." It is a narrow gap in a mass of rock more than one hundred feet high. As you enter, you look over a valley fenced in on all sides with white sandstone; and, nearly opposite, at the top of a hill, is another smaller gateway, half-concealed by a huge rock about the size of an ordinary cottage. This mass of rock is so balanced on the edge of the slope that it looks as if it might jump off and go thundering down the hill while you look at it. But it has hung there many centuries, and, if you should feel inclined to wait to see it go, you might have to stay a great many more centuries before the fun would begin.

The Garden of the Gods abounds with beautiful trees and foliage, and, towering amidst this loveliness, are some of the most extraordinary, queer and fantastic shapes ever made out of rock. Ages ago, when this part of the world was in a state of terrible commotion, vast layers of rock were forced up out of the earth in all sorts of positions. Some were vertical, some slanting, and some were criss-cross and mixed up generally. Learned men say that was the way these layers of sandstone, which once were flat, got up edgewise and in all other ways. We must take their word for it. There was nobody there to see.

Trees and shrubs, after a time, grew up around, and the disturbed earth had peace. Then came the mountain winds and the long autumn rains. The wind blew the sand against the rocks, which are so soft that you could dig holes in them with a strong jack-knife. The wearing of the sand and wind and water against these stony surfaces carved them into all sorts of wild and funny shapes. Ages and ages passed away, probably, before these grotesque sculptures looked as they do now. We can imagine how patiently the fingers of the wind must have chiseled at the stone, flinging on the water and the sand before it gave us such a picture-puzzle as this which we show you.

These rocks are twenty-five or thirty feet high. Others in the garden are yet higher; and all are of a soft red, very like the color of old bricks. The contrast between their rich tints and the green of the foliage is most charming. Here and there among the trees rise up fantastic shapes like spires, towers and steeples. Some of the fanciful names given these are "Montezuma's Cathedral," "Cleopatra's Needle," "Washington Monument," "The Cathedral Spires," and "Needle Rock."

The Indians have many traditions about these singular rock shapes; and it is not at all surprising that they were afraid to go into the enchanted garden. We can imagine that an ignorant and superstitious people would fancy that these huge images, which look so much like heathen gods, were terrible creatures. Even white people, looking into the garden in a half-cloudy night, might feel rather shaky about the knees.

But, as we said before, these are what may be called "faded fancies of an elder world," and we need not believe in them. What people might think if the hammering of the gods up in the mountains is probably only the thunder booming among the peaks. And it must be confessed that the powers of the air do get into the mountain storehouse; for, after the hammering and booming have been kept up some time, the caverns in the clouds are unlocked and down come the floods of water that have been stored there for use.

So, as the years roll on, the rains come in sheets and jets. Whirled by the winds, they leap from the clouds and mountains. They strike the rocks in the valleys below, and, like tools, they cut and carve, century after century, shaping strange forms and fantastic faces. Thus, while men live and die, they sculpture the statues in the Garden of the Gods, very much as our characters are formed by circumstances and influences of which the rest of the world takes little heed.

PARAGRAPHS.

From the American Missionary.

The public sentiment of Virginia, in regard to free schools, as gathered from the reports of the county superintendents, may be summed up in the language of one of them as follows: "I might content myself by saying that most of the educated in my county are now decided advocates of the present system. At first, a large majority were hostile to it; but a few days ago, one of the first men of the county said to me that he tried hard to believe it a 'Yankee innovation' upon our good old Virginia plan, and as such it should be opposed by all true Virginians; but now he had become a decided advocate of it, and believed that the only hope of educating a large majority of our citizens, indeed, that our very existence, as a free and independent people, depended upon the preservation and extention of some good system of popular education." An examination of one hundred and three such reports discovers the fact that in less than a dozen counties is there any great opposition to the system. The reports show an almost uniform and decided growth of public sentiment in favor of it.

The Negro Bishop of Ilayti, Theodore Holey a native of the United States, and consecrated in Grace Church, New York City, who, during the recent gathering of the Bishops of the Anglican Church in London, was much honored by all his brethren, and who at the invitation of Dean Stanley preached in Westminster Abbey, on St. James Day, closed his address with the following eloquent words and remarkable prayer:

"And now, on the shores of old England, the cradle of that Anglo-Saxon Christianity by which I have been in part at least illuminated; standing beneath the vaulted roof of this monumental pile, redolant with the piety of bygone generations during so many ages; in the presence of the

'Storied urn and animated bust'

that hold the sacred ashes and commemorate the buried grandaur of so many illustrious personages—I catch a fresh inspiration and new impulse of the Divine missionary spirit of our common Christianity; and here in the presence of God, of angels, and of men, on this day sacred to the memory of an apostle whose blessed name was called over me at my baptism, and as I lift up my voice for the first, and perhaps only, time in any of England's sainted shrines, I dedicate myself anew to the work of God, of the Gospel of Christ, and of the salvation of my fellow-men in the far distant isle of the Caribbean Sea, that has become the chosen field of my Gospel labors.

"O Thou Saviour Christ, Son of the living God, who when Thou wast spurned by the Jews of the race of Sham, and who, when delivered up without cause by the Romans of the race of Japhath, on the day of Thy crucifixion, hadst Thy ponderous cross born to Golgotha's summit on the stalwart shoulders of Simon, the Cyrenian, of the race of Ham; I pray Thee, O precious Saviour, remember that forlorn, despised, and rejected race, whose son Thou bore Thy cross, when Thou shalt come in the power and majesty of Thy eternal kingdom to distribute Thy crowns of everlasting glory!

"And give to me, then, not a place at Thy right hand or at Thy left, but only the place of a gatekeeper at the entrance of the Holy City, the new Jerusalem, that I may behold my redeemed brethren, the saved of the Lord, entering therein to be partakers with Abraham, Isaac, and Jacob of all the joys of Thy glorious and everlasting kingdom."

ENCOURAGING SIGNS OF THE TIMES.

Few things can be more gratifying and cheering to those engaged in the grand work of educating the colored people in Tennessee, than the fact that those having charge of educational affairs in the various towns, named below, either have, within the past few years, organized graded schools for colored youth, or are now taking steps for organizing such schools: Clarksville, Trenton, Shelbyville, Brownsville, Jackson, Union City, Bolivar, Parsi, Covington, Pulaski, Columbia, Fayetteville, Mason Station, and perhaps some other towns. Another thing that all who are engaged in the educational work in the State, ought to regard as a hopeful sign, is the fact that the last Legislature, in all its zeal for retrenchment, made no effort to reduce the income of the free school system. This, and the fact, that much complaint was uttered by the people all over the State, because of the suspension of schools consequent upon the postponement of the collection of taxes by the Legislature, show how deeply the system of the State has taken hold upon the affections of the masses.

Still another ground for hopefulness is found in the fact, that; whereas, year before last, not quite 39 per cent. of the colored children of the State were enrolled in the free schools, last year nearly 49 per cent. were so enrolled. And there are reasons for believing that, the superintendent's forthcoming report will show equally encouraging figures.

NAVAL REVIEW AT HAMPTON.

The success attending the naval review at Hampton Roads last year, and the great interest attaching to it, has induced the Secretary of the Navy to repeat it this year upon a still more liberal scale. Not only the training ships Constitution, Portsmouth, Saratoga and Minnesota, but all the other war vessels constituting the home squadron—the Tennessee, Kearsarge, Vandalia, Alliance, and Talnapoosa (the latter being especially for the use of the Secretary)—will take part in the naval manœuvers. The review will take place about the 15th of October, or soon after the return of Secretary Thompson from Indiana. The reports from the several training ships are of the most flattering character, and abundantly insure the success of the system of creating a corps of seamen who shall be representative American seamen.

The fine hotel accomodations at Fort Monroe, and the chances for delightful weather during a Virginia October, may well induce many to attend this Naval pageant, which promises to far exceed the interesting affair of last year.

NEWS ITEMS.

MALARIA IN NEW ENGLAND.—A recent issue of the Hartford (Conn.) *Courant*, says: "The Providence *Journal*, noticing the increase of malarial diseases along the coast from Long Island up the Sound, very truly adds that the increase is not limited to those regions. Malaria is spreading rapidly inland. You find it up in the healthy Berkshire hills; in the back towns of Connecticut, Massachusetts and Rhode Island; and, indeed, all about. It is said that one large Pennsylvania colliery has lately notified its customers that it cannot engage to fulfill future orders for coal with any degree of regularity because a greater part of its miners are by malaria incapacitated from work. Such things as these show the money-loss involved in the presence of sickness. There are various reasons assigned for the spreading of the disease, and people are full of wonder that it should appear where it never has before been seen. It may turn out some time that as the occupation of places runs on year after year and decade after decade the seeds of disease sown in that occupation get the chance to ripen, and that man himself is the agent that turns notoriously and naturally healthful places into the ways of sickness and death."

A NEW OCEAN STEAMSHIP LINE.—Some London merchants are arranging for a new line of steamships to sail between New York and London. It is to be started with four steamers. The steamers will be 400 feet in length each, and of 4,000 to 5,000 tons burden. One of the vessels, launched at Hull, and now almost ready, is the "Assyrian Monarch." The second is the "Babylonian Monarch," and was built on the Clyde. The third and fourth are building, and will be ready to take their places when needed. They are all fitted up for the grain and cattle trade especially. It is inte ded that the first steamer of the line shall leave New York early in October, and that a steamer shall follow every fortnight thereafter.

THE OBELISK.—The Egyptian obelisk was last week taken to New York city from Staten Island. It was placed on a section of the shot-railroad, resting on a pontoon, and was towed up by a steamboat on the flood tide. During the journey the obelisk did not move an inch, although the pontoons worked with the swell from all the steamers which passed by. The work of removing the obelisk and transporting it occupied just nineteen days, or two days less than was at first estimated.

A despatch from Chatsworth, Ill., says a heavy frost one night last week did great damage to all late corn in the central part of the State.

Snow fell in Gallagher township, Clinton county, Pa., on the 14th Sept. This township is in the Allegheny Mountains.

Horsford's Bread Preparation

makes delicious light and sweet Rolls without the use of lard or butter, that dyspeptics can eat. Try it.

NEW YORK, TUESDAY, Sept. 21, 1880.

The general aspect of business is exceedingly satisfactory and the strong tone of financial affairs continuous. The latest crop reports show that the yield in most cases exceeds anticipation and the railroads will be kept busy for some time to come. The tide of immigration and other causes serve to help up the healthy condition of business.

A cargo of ice reached New York recently from Norway. It was reported that this cargo was only the first of a number of ship loads that were on the way to some of the city ice companies, with a view to learn whether ice could be profitably imported from Europe.

DEATH IN A MINE.—Accordiog to a despatch from Virginia City, Cal., an accident at the Consolidated Imperial Mine on Thursday night caused the death of nine men, one other being dangerously hurt. A cage with ten men on it had started for the surface, when the cable broke, precipitating them down the shaft about 300 feet and 1,400 feet of rope was plied upon them, with the terrible result stated.

HORSFORD'S ACID PHOSPHATE

For Nervousness.

JOHN Y. SIMPSON, M. D., of Monterey, Iowa, said: The "Acid has—to use the lady's own expression, to whom it was given as a Nerve Tonic—made me a new nervous system." "

THE CYCLONE IN JAMAICA.—Further particulars of the cyclone in the island of Jamaica have come to hand. At Fletcher's Land nine or ten houses were destroyed, and in Pink Lane a house with furniture was turned bottom up. At Up-park Camp the military barracks were destroyed, and damages amounting to $50,000 sustained. The prisoners in the barracks had to be released to save their lives, threatened by the falling buildings. At Port Royal all the wharves were destroyed. At Glengoffe two women were killed by the falling of a house upon them, and at August Town only five houses were left standing. The settlements mostly destroyed are Freetown, Bardowie, New Grange, Prospeck, Hermitage, Spring, Southward Hill, Bowden Hill, Northrock, Woodford, Industry, and Jack Hill. In Padmore and St. Christopher's district all the fields are destroyed.

Horsford's Bread Preparation

does not change in strength by being kept on hand a long time. If hard, powder it, and it is as good as new.

Hampton Normal and Agricultural Institute

AT

HAMPTON, VIRGINIA.

INCORPORATED IN 1870.

S. C. ARMSTRONG, *Principal;* J. F. B. MARSHALL, *Treasurer.*

Devoted to the Education of Colored Teachers, for the Colored Race, and to Industrial Training.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division

Tuition free to all. Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

This institution is aided by the State but is supported mainly by voluntary contributions.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all who are interested in the negro race.

The great need of the institution is a permanent fund.

FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable &c., &c.

For further information address,

S. C. ARMSTRONG, *Principal,*
Hampton, Virginia.

VICK'S

Hard Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On every can will be found full directions how to prepare Crab Salad and Devilled Crabs,—two dishes recommending which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surprising delight of the palate. The meat of the crab is, by and by, a venture, the most delicate and delicious of all sea-food, far exceeding in fineness of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For pic-nics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs!! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $6 00 a case, not cash. Money may be remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $4.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

LIGHT-SHIPS AND BUOYS.

LIGHT-SHIPS AND BUOYS.

Light-ships, as everybody knows, are stationed where it would be impossible to build light-houses. Their purpose is not only to show the position of reefs, shoals, or wrecks, but also to point out the entrance to harbors. Sandy Hook Light-ship, which stands like a vidette to mark, if not to guard, the entrance to New York Bay, though not by any means perfect, is perhaps one of the best light-ships on our coast.

Such vessels require to be very substantially built to withstand the fierce storms that beat upon them and drive them hither and thither. Unlike any other vessels, there is no give to them; at times they are blown to sea, or are carried away by the ice. This happens frequently in the Sound, but as they are provided with sails, they soon make port again. Lights are hoisted at sunset every evening, and lowered at sunrise. The iron disks used as day signals, are stationary. During thick or foggy weather a large bell is tolled at intervals. Some vessels are provided with a fog-whistle, or siren, operated by steam, in which case an engineer is necessary. The manner of anchoring is different from that of any other vessels, and is the most secure way known. Two mushroom anchors, shaped exactly as the name implies, are sunk, say thirty feet apart; and to end, a chain running between them, to this is attached a swivel, and to that again a chain to the light-ship. For better security a chain with a weight attached is fastened to the head of each mushroom, running diagonally from each. The complement of men on board consists of master, two mates, and six seamen, besides the cook. During the summer months they are at liberty to go ashore, or take trips in one of the boats, fishing, etc; but from October until April they are confined on board. Their time is their own, and devoted to reading (a good library of substantial works being furnished by the government), playing cards, checkers, etc. As to the news of the day, they hear nothing, except through an occasional paper thrown from a passing vessels.

In rough weather a light-ship is rather uncomfortable. To use the expression of an old light-ship man, "She just jumps clean out of the water every time." The veriest sea-dog that ever "eyed his pipe or piped his eye" becomes a slave to Father Neptune, at least for a day or so. Too much can not be said in praise of the grave, self-sacrificing men who stand guard at these points of danger. Nor can the importance of their work be overvalued. Last year there passed between the Sandy Hook and Scotland light-ships, 1073 ships, 5283 barks, 1517 brigs, and 6885 schooners—in all over 17,000 vessels indebted largely for their safety to the faithful vigilance of the police of the sea.

"A stormy night," says David Stephenson, "may rudely drift the sleet against our windows, and disturb our rest; and perhaps our sympathies may be awakened for the men who patrol our dark streets as guardians of our property; but seldom in those dismal nights do our thoughts extend to the solitary outposts of our land, where, confined to the narrow cabin of a light ship, or watching in towers perched on bleak headlands or sunken rocks, the true guardians of the country's naval greatness keep their quiet and unostentatious vigil, unthought of because remote and unknown. Whether we consider the important position which our light-ships occupy among the tortuous channels leading to our great ports, or the calm endurance of their ever tempest-rocked inmates, they can not fail to arrests our interest, and inspire us with thankfulness that men are found ever ready to discharge the most unenviable duties in the important and humane work of protecting the lives of our hardy seamen." The life is one of great hardships, often of danger, and always of care and watchfulness.—*Harper's Weekly.*

THE AMERICAN REINDEER.

(See page 113).

The caribou or American reindeer, largely inhabits Labrador and Newfoundland, and still exists in considerable numbers in the province of New Brunswick. In the adjoining province of Nova Scotia their numbers are gradually decreasing. Going westward and south of the St. Lawrence, his haunts extend southward along the borders of the State of Maine and the country south of the city of Quebec to New Hampshire. The moose is found with him all through this district, and also the Virginia deer in its southern part. North of the Ottawa and St. Lawrence, the caribou ranges all through the vast forest regions as far as the McKenzie River, and is also found inhabiting the high lands of British Columbia.

In the State of Maine they are met with in tolerable abundance, and if the existing game laws are strictly enforced, we may hope that their numbers will not be diminished. In the wilderness tracts of that State there are vast stretches of barrens, amply provided with the reindeer lichen and interspersed with innumerable lakes and uplands, constituting a country admirably adapted to the habits of the caribou.

The prevailing color of the caribou is a dark fawn inclining to gray, darkest at the tips of the hairs, on the sides, ears, face, and outside of the legs, and fading to almost pure white on the neck and throat. The under part of the body and tail is white, and a ring of white encircles the legs just above the hoof. Some specimens have a light spot on the shoulders, and a black patch on the mouth. It is not uncommon to find aged and full-grown animals adorned with a flowing mane, which adds greatly to the grace and beauty of their appearance.

The heads and antlers of the caribou present much diversity of form, and seldom are any two found alike.

The construction of the caribou's hoof differs

from that of any other animal of the deer tribe, and is wonderfully adapted to the services it is required to perform, and enables the animal to travel in deep snows, over frozen lakes and ice crusts, when the moose and deer are confined to their yards, and at the mercy of their foes. Toward the end of the season the ground more fertile. A general movement has been made in that direction. The Liberia College is about to be removed to the high lands, where the great tribes of the Mandingoes and others can have access to it. The removal of the capital to the interior will also come in time."

mended to God for His blessing.

I shall hope to report in the next Southern Workman, his safe arrival as well as his address, for I am sure he will want to hear from all his friends, in that far off land. N. L.

"The A. B. C. F. M. has decided to occupy

Teacher's Table.

WHAT TO AIM AT.

The general complaint among teachers is that they have not time to do all that they

from that of any other animal of the deer tribe, and is wonderfully adapted to the services it is required to perform, and enables the animal to travel in deep snows, over frozen lakes and ice crusts, when the moose and deer are confined to their yards, and at the mercy of their foes. Toward the end of the season the frog begins to be absorbed, and in the month of December is entirely so,—at the same time the hoof expands and becomes concave, with sharp and very hard shell-like edges. A full-grown caribou stands nearly five feet at the shoulder, and weighs from four hundred to four hundred and fifty pounds.

A friend of mine, who visited Newfoundland on an exploring expedition, informs me that there the caribou holds almost exclusive domain over an unbroken wilderness of nearly thirty thousand square miles, in a country wonderfully adapted to his habits, and bountifully supplied with his favorite food—the reindeer lichen.

The woodland caribou is very swift, and cunning in devices to escape his pursuers; his gait is a long swinging trot, which he performs with his head erect and scut up, and there is no animal of the deer tribe that affords better sport or more delicious food when captured. The wandering habits of the caribou make it very uncertain where one will fall in with him, even in his accustomed and well-known haunts. When once started, the chase is sure to be a long one, and its results doubtful,—in fact so much so that an old hunter seldom follows up a retreating herd, but resorts to strategy and tries to head them off, or at once proceeds by the shortest way to some other barren in hopes of finding them there.

The caribou is very fond of the water, is a capital swimmer, and in jumping he is more than the equal of any other deer. His adventurous disposition, no doubt, in some degree influences the geographical distribution of the species. In the month of December, 1877, a caribou was discovered floating out to sea on a cake of ice near Dalhousie, on the Restigouche River in New Brunswick, and was captured alive by some men who put off to him in a boat.—*Scribners' Monthly.*

LIBERIA'S PROGRESS.

In one of the best rooms of the Continental Hotel a man sat at a desk busily writing yesterday afternoon when a *Times* (Philadelphia) representative was ushered in. He turned his head at the interruption, disclosing the features of a Negro of unmixed blood, and arising gracefully welcomed his visitor in the choice English of a highly educated man. This was Edward Wilmot Blyden, D. D., LL. D., Minister Plenipotentiary from Liberia to England, and the first Negro ever received at the Court of St. James, who also holds the position of Secretary of the Interior Department of the Republic on the West African coast. A native of St. Thomas, West Indies, he emigrated to Liberia in 1850, being a boy at that time. After receiving his education at the Alexander High School in Monrovia, which is named after Dr. Alexander, of Princeton Seminary; he became the principal of the school. He was subsequently elected Professor of Languages in the Liberia College, but resigned the position in order to make an extended journey in the interior of Africa. In 1864 he was made Secretary of State, and afterwards Secretary of the Interior. In 1877 he was appointed Minister Plenipotentiary from Liberia to England and has resided there ever since, with the exception of occasional trips to Africa. He is a member of the Athenæum Club, of London, and a frequent contributor to *Fraser's Magazine* and the *Methodist Quarterly Review.* Some of his most important articles have been: "The Negro in Ancient History," "Mahommedanism in West Africa," "The Republic of Liberia at the American Centennial," and "Echoes from Africa," all of which appeared in the *Methodist Quarterly* from 1869 to the present year. Within the past five years *Fraser's Magazine* has contained the following from Dr. Blyden's pen: "Mahommedanism and the Negro Race," "Christian Missions in West Africa," "Islam and Race Distinctions," and "Africa and the Africans." These will be published in book form shortly, at the request of many prominent persons of this country and England, who are anxious to preserve the valuable information on Africa which they contain.

On being asked what the present condition of Liberia was Dr. Blyden responded.

"It stands at the present day more flourishing and important than ever before, notwithstanding that it has greatly misrepresented. It occupies five hundred miles of the finest and most picturesque portion of Africa, with an interior extending two hundred miles back, abounding in everything necessary for the support of the people. The Valley of the Niger is accessible to the Republic, containing a population hospitable and friendly, ready to welcome to their home their brethren returning from the countries of their exile. As we push on and locate in the interior the climate is much more healthy and the ground more fertile. A general movement has been made in that direction. The Liberian College is about to be removed to the high lands, where the great tribes of the Mandingoes and others can have access to it. The removal of the capital to the interior will also come in time."

"What is the cause of this general departure from the original settlements on the coast?"

"The continent of Africa is surrounded by a belt of malaria extending for thirty miles in width, which is caused by the alluvial country. As we get nearer the interior we find high and healthful ground, upon which can be raised all the products of the country. Beyond are vast countries almost untouched, from which gold, rubber, sugar, coffee, hides, beeswax and ivory can be obtained in unlimited quantities. Not far from Liberia are the unvisited but easily accessible countries north and west of Ashantee and Dahomey, from which a prodigious trade struggling for an outlet filters through in very small quantities to the Gulf of Benin. The natives here are of a very friendly disposition. In 1872 I visited Sewa, the King of the Falabas, a powerful Pagan tribe, in the interest of the British Government, to make a commercial treaty, in which I was successful. The following year I also visited the Foulahs, a tribe living three hundred miles distant from Liberia, on the same mission. They are Mahommedans and have a King named Almamy Sula. I made a treaty of commerce and peace with him, also."

"How are the American Negroes treated who go to Liberia?" was asked. "They fare very well," responded Dr. Blyden, earnestly. "Each family upon arriving receives twenty-five acres of ground and each individual gets ten acres. Now if they have any energy they can succeed on that. But the trouble is, you send from the North dilettante Negroes, who are waiters and servants and don't like agricultural work. They are afraid to work out in the sun too. Now the Southern Negroes are accustomed to work and they get along well. This is especially the case with those of pure Negro blood. They feel that Liberia is their home and country, while in America, as they become better educated, they feel their strange position more keenly. As to the mulatto element of your country it is a question what will become of it. It may possibly become absorbed in the course of time, but America is no place for the Negro. I don't hesitate to advise every one to go to Liberia, as it is the only chance for them."

"What are the means of communication between the native tribe and the Liberians?"

"Some of the natives speak a little English, but the chief mode of communication is the Arabic. We are endeavoring to extinguish the dialects of the small fragmentary tribes along the coast, but will preserve the languages of the great tribes in the interior. We are now endeavoring to establish a professorship in the Liberia College for the purpose of teaching the native tongues."

"How does the commerce of Liberia stand at present?"

"It is rapidly increasing, and although there is but little commerce between Liberia and the United States, it has a large trade with England and Germany. The principal articles are sugar, coffee, rubber, ivory, palm oil, cocoa, arrow root, etc. The fact that the native kings desire the annexation of their countries with Liberia shows how it is flourishing. Only recently the King of Medina asked that his country might be annexed, and there is some talk of annexing Sierra Leone in the future."

"But Sierra Leone is a British possession," was remarked.

"Well," replied Dr. Blyden, with a laugh, "we should not go to war about it, but would make some amicable arrangements. The British Government looks upon us as black Yankees and watches our movements closely. They did not like our annexation of Medina, but as Liberia is an independent Republic they can do nothing. We have the whole country before us as far as Sondan, and some day Liberia may extend there."

—*African Repository.*

FROM HAMPTON TO AFRICA.

The Graduates of Hampton, as well as its many friends will be interested to know that Sam'l F. Miller, of the class of 1879, sailed for London Sept. 9th. He was to join Mr. Bagster and Mr. Saunders, and with them, will carry the gospel into the heart of Africa, to the inhabitants of Bihe.

Mr. Saunders' parents were former missionaries to Ceylon and Mr. Bagster is related to those of the same name in the well known publishing firm in London from which we get our Bagster Bibles.

These missionaries go out under the auspices of the A. B. C. F. M. and it was my pleasure together with another of Mr. Miller's former teachers and several of the officers of the Am. Board to be present at a farewell meeting with him, an hour before he left Boston for New York, at which he and his work were commanded to God for His blessing.

I shall hope to report in the next SOUTHERN WORKMAN, his safe arrival as well as his address, for I am sure he will want to hear from all his friends, in that far off land. N. L.

"The A. B. C. F. M. has decided to occupy as soon as practicable two important fields in Africa, which have never been visited by a Protestant missionary. One of them is Bihe, a populous town in the southwestern part of the continent, near the source of the Connza or Quanza river, in about 12 deg. south latitude. Commander Cameron and Major de Serpa Pinto, who passed through it while on their African explorations, represent it as healthy, with beautiful scenery, but with a population exceedingly demoralized, and under the control chiefly of of Portuguese traders. That it is a fine field for mission enterprise, we cannot doubt, and it is to be hoped that the missionaries who go there will be of the right stamp and that success will attend their labors."

TO THE HAMPTON GRADUATES.

My dear friends,

By the time these lines meet your eye, you will, I presume, have begun the work for which you were prepared by your Alma mater;—some entering upon it for the first time, and others, with whom I exchanged greetings four, five, six, or even seven years ago, returning to their labor of love with enlarged experience and a deeper feeling of responsibility. The steadfast course of some of you, I have watched with gratification amounting almost to a feeling of pride, but of the greater number I have heard only through others, and a satisfactory report it has been. Let me congratulate all of you who are again permitted, after a season of rest, to take up the march of life. May you so walk that the "footprints you leave on the sands of time" may encourage many a brother and sister, to follow you as you follow Christ. Some of you may feel that your work is not duly appreciated, and, therefore, of little importance; but every stone in a building has its place and value, and those that form the foundation, the hidden ones, are the most important. Take courage, then, and gird up the loins of your mind; resolve to do your duty; press forward notwithstanding the obstacles that lie in your path, and look upward. Your fellowmen may not appreciate your efforts, but God does. His eye is upon you, and He knows your struggles and sacrifices. "Thou, God, seest me," is one of the most comforting assurances to those who are endeavoring to please and serve Him, while it is full of warning to the disobedient. The eyes of the Hampton Institute, its Officers and Teacher's are upon you lovingly and anxiously, looking for the fruit of their past labor. They feel as did one of the former Principals of the Avery Institute, when he wrote to the Graduates of that school: "Let no one think he has yet done all for Avery; Avery gave her whole soul to you; she demands a whole-souled life from you; don't you dare to trifle with her; don't you disappoint her. I charge you, be true, be pure, be earnest, be thorough, be sincere, be honest, be strong."

The eyes of your former class-mates are upon you, watching to see how you are carrying out and acting upon the teachings of your Alma Mater; whether you have the perseverance that is needful for success in every undertaking, and intend to continue teaching, not for a short period, but until you build up a model school, the best school in the county where you are located.

The eyes of the community are upon you, scanning your conduct, anxious to see whether your profession and practice agree, and if your life corresponds with the moral lessons you give to your pupils. Some will look upon you with suspicion, others will look upon you favor; but never mind; pursue the right course steadily through good report and evil report, happy in the consciousness of your integrity, and in the assurance that your labor will not be in vain.

Finally, the eyes of your pupils are upon you; you have their confidence; they look up to you with undoubting faith; they believe in your honor and truthfulness; the little ones probably think you know every thing and can not do wrong.

May these considerations act as a stimulus to you; do not be discouraged by the greatness of the work and the responsibilities it involves. The consciousness of our weakness leads to watchfulness and prayer. "Be strong and work, for I am with you, saith the Lord of hosts." He giveth power to the faint and to them that have no might He increaseth strength. Let us not be weary in well doing; for in due season we shall reap, if we faint not. After the experience of fifty years, I rejoice that my life-work has been that of a Teacher, and I hope you will never regret having chosen the same occupation.

I am your sincere friend,

M. A. L.

Teacher's Table.

WHAT TO AIM AT.

The general complaint among teachers is that they have not time to do all that they would like to do. We can appreciate that difficulty to the full, but is there not much time spent uselessly in teaching unimportant things?

Now, what are the important things with which boys and girls should be most familiar when they leave school? We reply, those things which will be most useful to them in after life. In order to show what we conceive these things to be, let us take up each study separately and try to point out those parts of each that are of practical importance.

1. SPELLING. Did it ever occur to your mind that the time spent in teaching pupils to spell words of which they do not know the meaning, is almost a waste of time? When is the knowledge of spelling practically brought into requisition? Is it not in writing letters, or in some other form of composition? What kind of words does a writer use, those of which he does or those of which he does not, know the meaning? You answer the former. Then, those are the words that he ought to know how to spell. Therefore, see to it that the pupils know the meaning of all the words they learn to spell, for by that method you will at once be adding to their vocabulary and their intelligence. It is better to know how to spell a thousand words and know the meaning of them all, than to be able to spell ten thousand and to know the meaning and use of but a small fraction of them.

READING.—Pupils on leaving school should be fair readers. By that we mean, they should be able to read in an easy and conversational style. Whenever that is accomplished let reading be laid aside, and the pupils devote their time to something more important while in the school room. But let the teacher endeavor to awaken in the minds of the pupils a taste for general reading as a method of instruction, for it will be the means by which they will gain much useful information all through their lives, and thus they will continue the education which was begun in the school-room.

ARITHMETIC.—This branch is studied from the time the pupils enter school until they leave it. They begin at the beginning of the book and keep plodding away, working the questions by the rule as given in the book, until finally they have "finished it"—at least, they think they have. What do they know about it? Not very much. It would be well enough to have a knowledge of everything that is to be found in an Arithmetic; but would it not be wisdom on the part of the teacher to see to it that its practical features are first mastered?—the four fundamental principles, fractions, interest, percentage, decimals, denominate fractions, etc. A smattering of these will not do. How many boys on leaving school can make out a bill, write a receipt, or a promissory note?

GRAMMAR.—The first thing pupils learn in the study of Grammar is—"English grammar is the art of speaking and writing the English language correctly"—but they never learn to do either. They commit a great many definitions to memory which are no many words without corresponding ideas—mere husks of knowledge. Such expressions, as, "I don't want nothing," "I seen him," "I done it," "It was me," and a thousand other kindred expressions were theirs before they commenced the study of grammar and remain a part of their every day vocabulary.

GEOGRAPHY.—The Philadelphia *Record* some time ago spoke of a young girl, who on being taken to the country for the first time, asked the guide if the stream known hereabouts was the Amazon River. She was a child of average intelligence, and could recite glibly the lessons in geography. But when standing on the banks of the Schuylkill, she was at a loss whether to call it the Amazon, the Niger, the Nile, the Euphrates, or the Yang-tse Kiang. Again, the pupils are compelled to memorize a mass of details, including the names of the Capitals of all the countries in the world, together with the lengths of the principal rivers, the boundaries of all countries, etc. and too often left in total ignorance regarding the essential facts of local geography.

If your horse is shy and hard to catch, take finely-grated horse-castor, oils of rhodium and cummin; keep them in separate bottles, well corked; put some of the oil of cummin on your hand and approach the horse on the windy side. He will then move toward you. As soon as you can reach him rub some of the cummin on his nose, give him a little of the castor on anything he likes, and get a few drops of the oil of rhodium on his tongue. After this you can make him do nearly everything you want. Treat him kindly, feed well, handle gently, and your victory is certain.—*Turf, Field and Farm.*

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL,
Business Manager, Hampton, Va.

Entered as Second-class Matter in the Post office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute and printed on the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work, from all parts of the country is solicited, and will be done cheaply and well. Estimates will be sent on application.

The Hampton Institute opened Friday, Oct. 1st, for examination of applicants. The following Monday, classes were organized with a full school. There never was such prompt attendance. At this writing, the numbers are as follows.

Colored men 174, colored women 80, total 254; Indian men 45, Indian women 19, total 64; Boarders 318, Day scholars 21; Grand Total 339. Eight more Indians are expected to replace those sent home in summer for sickness, and from fifteen to twenty more Negro youths.

Quarters are over-crowded. The proposed building for Indian girls is urgently needed to equalize the number of Indian boys and girls, and relieve the present crowded condition of the Girls' Department. There should be at least fifty of the latter. For the second time, young men are encamped in tents.

The Printing Office, Knitting Department, and Girls' Industrial and the Tailoring Departments, each need new and larger rooms; there are serious objections and difficulties as they now are.

To provide work for poor girls who wish to earn an education, (only boys now having such a chance) and supply room for not less than a hundred students of both sexes in the above named Departments to work their way, as well as to provide rooms for forty young men, a three story brick building 130 x 40 feet, nearly fire proof, is planned, to cost complete with heating apparatus, steam power and supply of sewing machines for women workers, *Fifteen Thousand Dollars.*

Experience has shown that the preliminary year which the ignorant and indigent are compelled to pass through, working ten hours hours a day and studying two hours every night, gives a student an excellent mental preparation, enough earnings to continue in school for two years, and a development of physical and moral force that no other year of the course affords.

This labor department is crowded with male applicants; there are now at this school twenty, and around us hundreds, of worthy girls who need the chance.

The Saw Mill and Wood-working Works are complete within themselves, in good order, with 18 labor students, and paid for by the munificence of a friend.

Help those who help themselves.

NEEDLESS POVERTY.

Business men generally grumble about their own affairs, but it is really the farmers who think they have a right to a monopoly of grumbling. It seems to be well understood that while they have as much, they have a way of showing less intelligence, mental capacity, and original thought than the men who go into trades, or into business. The isolated life of the farmer cuts off mental practice, his work lies in fixed grooves, his products are staple and require no great shrewdness in selling them. Until farming takes a different turn, the want of mind-wrestling, of the hitting of flint and steel, will always put the agricultural class in the rear ranks in the march of improvement. It is only to repeat an old story to say that the wonderful machinery now used in farming, and the introduction of the finer breeds of all kinds of stock, are not due to the farmers, who should have made these improvements, but to the amateurs, the "fancy" farmers, the men who look out of dingy windows in city streets, and dream of the green sward, and the sunshine, which made their young days happy.

These men have carried their fortunes to the soil, and have spent them lavishly in getting results, of which the greatest profit has been to the common farmers. The close returns of soil tillage make the farmers a non-inventive class. They know how it is to earn a dollar, and they hesitate to spend it. So far as they abandon many of their inherited ideas, and approach the ways of business men, in conducting their affairs, so far they give increased value to their farms, and make the business pay. The owner of a factory is always watchful of the market, and when the demand for one kind of goods falls off, he looks up and makes another class which is in demand. Farmers "lie down" when their crops fail them. They live closer, and grumble. Even if they read about the great progress in agricultural science, their habit of mind keeps them away from even inexpensive experiment.

It is said that the most successful farmers are the business men who have left trade, and carried into their new department better ideas of organizing labor and of economy.

In the county in which this paper is published, the farmers have been engaged, since the war, in raising "early truck," that is, early potatoes, cabbages, peas, tomatoes, and asparagus. Having the advantage of three weeks over New Jersey in the way of climate, they have obtained high prices for produce. Latterly, the Carolinas have discovered that they have a similar advantage over Virginia, and there goes now to the great Northern markets vast quantities of produce from those States before the farmers of this section have matured their crops. Trucking no longer pays. At present, the farmers of this county are worse off than they were several years ago. They fall back on corn and wheat as of old, though these crops are produced more cheaply at the West.

It does not occur to them to look up different products which might pay. In an adjourning county, separated only by the James River, a few peanuts were cultivated. The profit was large, and the cultivation was extended until last year it reached 350,000 bushels in quantity and $300,000 in value. The soil of this adjoining county is light and sandy. While it cannot make corn and wheat profitable, it can make peanuts very profitable. The average yield of this crop is in value considerably beyond that of the great wheat producing regions of the West. The farmers are prosperous, and everywhere there is evidence of social improvement. Now the soil of this county is essentially like that of the peanut growing county, but the peanut has not been raised. It might be supposed that the farmers here would keenly watch any crop which would relieve them of their distress. But if the farmers are asked why they do not raise the peanut, they will reply, "we don't know anything about it," "we never thought of it," "we are afraid to try," "our soil is not the right kind." And yet, the appropriation of one day's labor, and the investment of two dollars in seed would have established the success or failure of this crop. It now appears that the soil of this county is well adapted to the raising of this nut. These farmers have done nothing, while their neighbors have been reaping great harvests for ten years. This is an instance of the sluggish working of the farmer's mind. If ten years ago, a successful experiment had been made, he would have taken advantage of it. But the curious conservatism of his nature leads him to reject anything but practical demonstration in his own presence. It does not occur to him that agriculture is in its infancy, and is full of the most wonderful possibilities. There is a great mistake in the idea that experiments are costly. Ignorance is costly. Thought saves money. The waste in experiments comes from the want of forethought. Men complain of privation and poverty when comfort and ease lie before them. What thrifty farmers have done and are doing always, are matters which ordinary farmers ignore. The astounding capacity of an acre of ground is hardly known to most men. Capital is necessary in order to make large returns in farming, but thrift and intelligence fall only a little short of it. Indeed in some cases, they make greater returns.

It is safe to say that in years to come thrift and intelligence will bring twenty-fold larger profits from land valued at three hundred dollars per acre, than from the same land, now valued at ten dollars per acre. It is said that there are men who make by better tillage, a larger profit from the peanut at one dollar per bushel, than they did, with poorer cultivation at three dollars per bushel. The cause of poverty in farming is want of education Thinking, trained thinking, is needed in the complicated matters which concern agriculture.

The farmers present the curious and exceptional case of men who highly prize money but fail to use the means at their command for obtaining it. Until they change their ways, they must rest satisfied to be called the "sons of toil."

W. N. A.

EDITORIAL CORRESPONDENCE

FROM THE HAWAIIAN ISLANDS.

HONOLULU, *August* 1880.

There is a tempest in the Hawaiian tea pot, which is likely to turn out a serious matter for those in the tea pot. The majority of the legislature, which is in session, is composed of young Hawaiians who are intelligent but not "level headed." They have passed a bill allowing the sale of liquor to natives, and the manufacture of opium. Petitions are being sent to the King to withhold his signature, (his veto being final) by the commercial houses and planters all over the islands. Free liquor to the natives means ruin, for they have no self-control. A sale of $30,000 worth of sugar plantation property was recently checked by this legislation, which if it goes through, will reduce the value of property over 30 per cent.

The English government has just refused to continue a license for the manufacture of opium, from the crude article, in Hong Kong, so that this manufacture is now outlawed in the civilized world, and it is believed that there is a "cat in the meal," in the pending bill, by way of a scheme to make these islands the headquarters of the opium business, to the detriment of the people who are using both opium and rum freely on the sly, getting them through Chinese peddlers, usually plantation hands who have worked out their time and can make big profits in this illicit business.

It is hard for the spruce and stylish young Hawaiians to contemplate a low South Sea Islander or Chinaman taking his drink and to be prohibited by law from going to the same bar. Young Hawaii can get his drink somehow but won't be satisfied until he can walk up and take it like any other man. The sagacious and powerful chiefs whose paternal authority was so good for this race, are dead. They prohibited liquor to natives who could not prohibit it to themselves. Hawaiian and South Carolina history both illustrate the result of putting ignorant men in power. The white man here pays the taxes which have been voted away at the rate of over a million a year, chiefly by irresponsible members who do not represent wealth or intelligence.

While good white men have still great influence in legislation, they cannot control native members on many important issues, for the reason that these weak and not ill-disposed legislators are always being led into wild schemes by some shrewd unprincipled foreigner or "carpet-bagger" who plays upon race prejudices. The country has just been saved from a $10,000,000 loan advocated on plausible but really absurd grounds by a vote of 20 for, and 23 against: a narrow escape from a fatal debt. As usual they were clear headed natives, who took the sound view. The better class of them are always on the side of right. This is true of the Negro race.

For the first time in Hawaiian history, the foreigners of every nationality have forgotten their petty jealousies, and are solid against these threatening schemes.

A discouraging feature here is the weakness of moral and religious influences. Fifty years ago, as devoted men as the world ever saw came out here and established a christian civilization, but most of them are now dead or retired from active duty, and their places are filled, chiefly, with partially educated native pastors, who are too weak for the temptation and responsibility put upon them. The best of them can not say, "No." Much ground has been lost. New blood is needed.

The Catholics replace their veterans with fresh men. The Protestants with intelligent natives. The former are the better judges of men and measures. There should be at least six new men sent here for the Protestant mission. Ten thousand dollars more a year must be expended to save what remains of an enormous sacrifice of men, and of a million and a half of money. The situation is not worthy of the New England pluck that began this work. The descendants of the Pilgrims, working under God's orders, should never give up.

A bright spot in the field is the "North Pacific Mission Institute," under the Rev. C. M. Hyde, D. D., occupying the grounds of the old U. S. Marine Hospital. It has about thirteen young native pastors, who, after proving their quality and character by a few years of preaching, are gathered here for a two or three years course of study. In the morning, they study and recite. Afternoons, they go out to work, getting fifty cents for half a day, thus supporting themselves and their wives, who are carefully looked after by Mrs. Hyde. The native preacher needs this setting up, besides there is a famine of good native ministers. Entering the ministry with a moderate mental outfit, he soon says all he has got to say, and is seldom able to study with profit by himself. It is sensible to select well tried men for additional study. They are earnest and appreciative. They don't come for rest, but work, and will starve unless they use their hands diligently half the time. This is a theological method as wise as it is new, and should be helped. Dr. Hyde expects his graduates as pastors to cultivate the ground two days a week, visit two days and study two days.

I give the above details because it is the plan I have long had in mind for the colored pastors of the South, as a department of the Hampton School. A chief difficulty would be the "odium theologicum." Putting it on a simple evangelical basis, would unite the denominations both as students and teachers. Colored people are mostly Methodists and Baptists.

The Hampton School gets hardly a dollar's help from year to year from these denominations, but its supporters are, I believe, large minded and large hearted enough to cordially aid the earnest but poorly qualified colored preachers to the teaching that they need, and to use as far as practicable, qualified instructors of their own creed, who are to be had in the educated white pastors in the vicinity.

Our thoughtful graduates are constantly saying that the negro is best reached from the pulpit. But I don't believe much in the technical training given by most theological professors. It may make ministers, but it don't make men. Such a work at Hampton should begin in a small way and would be for the benefit of earnest honest colored preachers who should feel their need of help. A supply of sense and thought would go, through them, to a most needy and destitute field. Some of our graduates should become fitted to preach as well as to teach, for the preacher of a race like the blacks, especially in country regions, must for a long time to come, be a farmer or teacher who don't depend on his church revenue. Only in this way can men who teach by example, reach this race and be independent enough to assail their prejudices. The paid pastor seldom does this anywhere.

A most serious difficulty in such work for either race, (for the Hawaiian theologus studies English hooks but recites in native) is the want of comprehensive text books in simple language. Dr. Hyde, a Congregationalist, uses a Methodist book as the best he can find. Among other obstacles in his work he finds the Hawaiian custom of feeding one's *Makamakes* or friends. Every native from the richest to the poorest will feed his friends, till he is stripped of everything. It is thus that the successful seldom remain so long. If you remonstrate the answer is, "I may be in need anmo day myself." The doctor's students are often "set upon" in this way till he comes to the rescue.

WAIALUA, OAHU.

This is my last trip before taking the steamer for California. At noon I attended the prorogation of Parliament. It was a brilliant scene of glittering uniforms worn by civil, military and diplomatic dignitaries, and was ushered in with an artillery salute and parade of troops, the band playing the national hymn. To the delight of everybody, the opium and free liquor bills were returned without the King's signature, although a majority of the cabinet advised him to sign the latter. Fault finders ceased, because they were few—the ship of

state had passed the rocks. Great credit is due to his Hawaiian Majesty for saving the nation from an overflow of liquor, yet were it not for the pressure of public sentiment, his sprains and wounds, and had shrewd intuitions. A young woman in Kauai recently gained great reputation and much money, by incantations got himself appointed Minister of Foreign Affairs, with weak men for Minister of the Departments of the Interior and Finance, and time to witness the reception of President Hayes, whose welcome was most cordial and handsome. It is delightful to see how a Chief

state had passed the rocks. Great credit is due to his Hawaiian Majesty for saving the natives from an overflow of liquor, yet were it not for the pressure of public sentiment, his course might have been different. The departure of the Legislature is a boon, they will not meet again for two years more and things will go smoothly, as they do in the States when Congress adjourns.

At two p. m. three of us left Honolulu on horseback for the thirty mile ride to this village, stopping an hour at Ewa for a late dinner on fish and cocoa-nuts, with a very decent native who lives on the shore of the great lagoon. Galloping over the high table land, as the sun went down behind the Wainae mountains on our left, was glorious. Nearing our destination, we were met by an outrider who fastened a wreath of flowers roun l each of our necks, and soon we were cordially welcomed by the sheriff of the district, an unusually sensible native, who has a nice house and quite a family living in civilized style.

After a feast we want to bed. At 3 a. m., we were awakened by a messenger from town notifying us that the king had suddenly called for the resignation of his ministers, who had just received a strong vote of confidence. A Judge of the Supreme court and the editor of the leading paper being of our party, it was important that they should know the facts, and soon the latter was on the way back to the Capitol to train his guns again, as the recent royal action in vetoing the objectionable bills had called for high commendation. The judge could hardly stay, but being my sole companion for the journey, and needed to interpret my Sunday talk, he kindly remained.

The gathering at the old church Sunday morning was interesting. During the meeting, a crazy woman marched into the pulpit, waving a stick and made a few brief emphatic remarks, but was led out by a stalwart deacon, in response to a wink from the judge. No one noticed the absurdity or laughed. I have seen a dog-fight just under the pulpit and not a smile in the audience, while we small boys were convulsed and had to get under the seats.

A great point to make with these people is the care of their children. The want of it is a chief cause of an unprecedented death rate, in a land where foreign children, because of good care, have an equally remarkable vitality.

In response to a call from one of the congregation after the benediction I sang, with the organ, a few of the Plantation Songs, which "astonished the natives." They gathered around thickly, and seemed to enjoy it much more than my good advice. The usual hand shaking followed and a Hawaiian dinner, at which our host put around our necks fresh wreaths of fragrant jessamine flowers. The Hawaiian host seldom sits with his white guest. He may have a fine house and be an important officer, but he regards a visit as an honor, and is both dignified and attentive in a charming way.

We walked over towards evening to Miss Green's school for young native girls, in one of the old mission houses. When full, it has fifty pupils and is one of the bright spots in this kingdom. It has graduated many girls who have made good wives. She is quite encouraged in her work. (See account of it in Lippincott's Magazine for October.) In this and other like schools, the girls are crowded, perhaps twenty in one large room, the victims of a false economy. They should be separated in many smaller rooms, not over two in a room. These girls' schools are the last hope of this nation, but are neglected by all but a few thoughtful people. This want of appreciation is unfortunate. Public spirit is rare.

This, like every other place I visit, is full of boyhood's associations. Here, over twenty years ago, we paddled out in canoes to shoot mud hens, and on yonder mountains hunted wild turkeys. We held innocent carnival over the fruits of the chase, and then galloped over wide plains to fresh fields. In the evening the minister "Timoteo," with a few intelligent natives called, and we talked long over the condition of their people. One detailed their superstitious regard for native doctors. He said that the "Kahuna" (Medicine-man,) would request first a gift of a pig, chicken, potatoes, taro, etc, then an offering of cooked food for the "au-makua" or spirits, and then offer a prayer to God in heaven, often using passages from the Bible. The Kahuna would say, "The cause of the sickness is some sin you, or some of your family, have committed." Under fear, the patient would perhaps confess a long list of evil deeds, and the sense of having done a duty would sometimes bring relief. What the Bible says about praying for the sick encourages these practices among them. To find out whose sin caused the sickness and was being punished, the "awa" root is chewed by the priest, and the rising of the bubbles on the expectorated liquid, decided who was the guilty one. That sickness is a punishment for sin, is even now the prevailing idea. To acknowledge and repent is a mode of cure.

Many of the old time doctors knew something of disease and medicine, especially of the application of medicinal plants to bruises, sprains and wounds, and had shrewd intuitions. A young woman in Kauai recently gained great reputation and much money, by incantations which consisted in waving *dracæna* leaves at the patient. Her power was broken by prosecution for illegal practice. A fine breaks the charm; nobody went to her after that. Many who read their Bibles and pray every day have faith in these doctors. While they appear to make some wonderful cures, they are really killing the people. Even white people have consulted them. Their practices are sometimes too revolting to be described. The reputation of a Kahuna is transient, his prestige, being accidental, is not enduring.

KAHUKU AND KUALOA.

On Monday, the Judge and I rode on to Kahuku, a cattle ranche, where there is a famous and beautiful grotto, filled from a subterranean stream, in which we took the customary luxurious bath. We lunched delightfully, and were reminded of the possibilities of culture and character in women with Hawaiian blood in their veins. We were kindly escorted to the limits of the ranche, and in a few hours reached a charmed spot in my boy life, Kualoa. We rode that day thirty miles along the sea shore on a thick, elastic turf, on which our horses' feet bounded, through herds of countless cattle.

Our track lay on a narrow, perfectly level stretch, between the mountains and the sea. On our right the former terminated abruptly in a natural rampart some three hundred feet high, looking like a barrier raised by giants against a foe from the sea. It needed no imagination to think of this. We rode on the *glacis* from which this parapet of singular regularity and grandeur rose up for more than ten miles. After Kahuku was a succession of lovely valleys, as we cantered along the shore of the Pacific, enjoying the music of its waves, and trying to look two ways at once to catch the beautiful dissolving views as one lovely scene followed another. We had not time to visit the deep dark *canon* where the monster Kamapua half hog, half god, was driven by his enemies, and finally escaped by a prodigious leap to the top, leaving a smooth concave channel in the rock, made by his canoe which he dragged after him.

The rice fields of Punaluu looked beautifully.

Think of a ranche fenced by Nature, with the Pacific Ocean on one side and a palisade on another, a narrow, smooth, green pasture running for over three miles at the foot of these castellated heights—a succession of turrets wonderful in their regularity. Instead of cutting the mountain squarely off, Nature threw it into huge, rounded pillars, buttressed below by foot-hills and tapering at the top into pinnacles, full of architectural symmetry and beauty. I doubt if in the world is there such a magnificent thirty mile ride on velvet turf, between mountain and sea, as that on Oahu, from Waialua to Kualoa!

Orders for our reception had been given. Wiggling fish, fresh from the sea were soon wrapped in *ti* leaf and roasting on the coals. The Judge and I roamed round the house in which we had in our school-boy days held high revel, bombarding each other over the partitions, with potatoes and pilows from evo till morn. Who ever knew a party of boys on an expedition to get any sleep the first night out.

Cocoanuts were placed at our feet which we sucked in perfect happiness. Then we supped and lounged on the veranda, gazing at the lovely island "Mokuaila," where in by gone days we had hunted rabbits and watched the breakers. The rest was grateful after thirty miles of riding. Just as we were going to bed an orderly from town rode up with an urgent message to return at once, as there was great excitement and might be trouble. We found a fresh and speedy mount; before us was a twenty mile ride in full moonlight, through fine scenery, past extensive rice patches and sugar plantations. Stopping at midnight for lunch at a Chinese restaurant, we were nicely entertained without charge, for the "heathen Chinee" said we had a hard ride and he would take nothing. Had he not a soul? We crossed the famous "pali," a fifteen hundred feet precipice, up which a zig-zag road is cut, leading, at the top to, one of the finest views on these islands. The moon shone full behind the two cloud covered peaks which towered up each side of the "pali," throwing a white silvery light on the plain below, in contrast with the black mountain side under the clouds. At 2 o'clock A. M. we rested, after a midnight interview with the editor, who assured us that there was no immediate danger. Fifty miles that day.

HONOLULU AGAIN.

Things are working curiously. Never was there a day like yesterday in this nation's history. The entire foreign community assembled to protest to the King against a new ministry, which did not represent the wealth, intelligence and character of the country. Of a line of kings, dating from 1830, not one had ever touched the self-respect of his subjects by such scandalous appointments. A foreign adventurer of a few months residence, had by flattery and falsehood, humbugged the king, and got himself appointed Minister of Foreign Affairs, with weak men for Minister of the Departments of the Interior and Finance, and Attorney General.

Formiga diplomatic representatives, have hoisted and sealed their flags, refusing to recognize such an injustice and going out of relations with the Government. Under this pressure, the "carpet bagger" resigned and a better ministry is expected. The King, uneasy at the uprising of the people, with whom he is not popular, called out the regular and volunteer forces of the Kingdom, some 150 men and guarded the palace for several days. All passed off quietly except one rush of the regular army to arms, occasioned by a catfight, which was mistaken for a night attack.

I am on "Puach Bowl" a striking and highly ornamental extinct volcano, just back of my mother's house, overlooking the town of Honolulu, mounted with heavy guns. It serves as a battery for royal salutes, and is dangerous to nothing but the windows, glass, and crockery in the houses below, which the concussion sometimes breaks. Five miles away, to the left, is Dismoad Head another crater, a bold detached headland with a lordly crest, towering above the sea like a monster lion couchant, laving his feet in the ocean and ready to spring on any invader of the fair city he guards.

I used, when a boy, to sit astride these old fashioned sixty-pounders pointing at the sea, wondering what kind of a world lay beyond the horizon. There was a mystery about it, a longing to see it, that has since been gratified. It is interesting to sit on the same old place, but the wonder is at the past rather than at the future.

The sun is going down behind the distant Wainae mountains; its last rays tip with gold, the crest of Dismoad Head; Honolulu below is lying in shadow and embowered in trees. The harbor is full of ships. Beyond is the horizon, the most fascinating thing in nature.

STEAMER ZEALANDIA.

This good ship has returned from New Zealand and Australia, and stops as usual en route for San Francisco, at Honolulu for passengers. One gets more from men than from books. I have picked up some ideas from passengers from the Southern Hemisphere. I knew nothing of the grandeur and beauty of New Zealand scenery and the richness of its soil. It is a growing country, but is harrassed by a tremendous public debt, from costly railroad building.

Its aborigines, the Maoris, are the noblest, bravest savages in the world. They long kept the English regulars at bay, and now sometimes attack the settlements. They hold vast tracts of land and keep aloof from civilization.

In Australian, niversal suffrage results in some bad legislation, to the disgust of decent people, but thoughtful men agree that the tone of society is steadily improving and that they will work out of this chaotic period.

The aborigines of Australia are about the lowest in the world, live like animals, in seeming hopeless degradation; a few however have been raised and made useful around the cattle ranches. They are often shot like wild beasts by the settlers. There is little water, and fine scenery is scarce. Delicious fruits abound; vast ranges are devoted to stock. Kangaroos are a nuisance. An English navy officer, returning home after an eight years cruise in the Southern Seas, in command of the flag ship, had observed the excellent missionary work in the Melanesian Islands under Bishop Selwyn and commended its practical character. He had lately visited the Fiji islands, now owned by Great Britain. The Fijians, a finely formed people, will not work. Labor for the sugar cane and cotton crop is imported from other islands. They have given up cannibalism, and since British rule, wars and anarchy have ceased. Self-government was impossible, and for years they had urged themselves upon England before she would accept the responsibility of a half a million dollars debt and an expensive administration. Fiji now seems to have a future. The whites there have made much mischief and give no little trouble to any government that considers the welfare of the natives, whose weakness is their profit.

England sends her best men to deal with race questions and weak ignorant people. She gave the New Zealanders a noble man who governed that colony in the interest of the aborigines, making wars with them as humane as possible. The governor of Fiji is Sir Geo. Gordon, whom the whites would be better pleased with if he looked less to the interest of the natives. Sir Authony Musgrave, Governor of Jamaica is true to the welfare of the ex-slaves of that island and is working for their improvement. In such places the ideal point of the whites is solely that of money-makers. The right kind of a ruler is not likely to please them.

OVERLAND.

After a smooth and uneventful voyage of eight days we reached San Francisco, just in time to witness the reception of President Hayes, whose welcome was most cordial and handsome. It is delightful to see how a Chief Magistrate who disappoints party managers has satisfied the people. When the "organ" rage, the people praise, and *vice versa*; the man care for office, and the other for peace and order. Mere riding on the California st. cable cars; how they glide up and down the steep hills, and you think how good you feel pushed along by some mysterious power. Would that cable power were every where and tired car horses forever turned out to green pastures. Crossing the continent the second time lacks excitement; it is provoking that so many fine views are passed in the night. The Sierra Nevada scenery toward the evening of the first day is magnificent. I am told that water would work wonders in the Humboldt Desert. This parched dreary country may some day blossom. A French company recently lost $450,000, in trying to irrigate it; artesian wells may solve the difficulty. Letter writing on the cars kills time pleasantly, but makes a sad job for the Hampton printer boye who by this time must be equal to the hieroglyphics of Egypt.

How people are brought together on a seven days ride like this; the ends of the earth meet in a parlor car. There's nothing like a toddling infant to break the bonds of reserve. There is an irrepressible in our car who gives every one occupation and a common interest. He is most destructive of my pencils and paper, for he must have everything or he will howl. I pity the mothers whose little ones are always making for the car door; they are always patient, but the fathers get cross. Eternal vigilance is the price of baby life.

I am most solicitious that my bundle of sugar cane and my cocoa-nuts should reach in sound condition the good little girls and boys in the East, for whom they are intended. Never before, I believe, have fresh, young cocoa-nuts, whose tender meat can be scraped out with a spoon, been brought to this strange and distant land. Tough old cocoa-nuts get used to it and don't mind. Sugar cane, whose green leaves a few days ago waved in the tropics, is going five thousand miles to be chewed in the hills of Berkshire and to delight small boys in Hampton.

Our fellow-passengers from Australia tell us that, on crossing the 180th degree of longitude a day is added to the week. For instance; crossing eastwards, on a Sunday, the day following is also called Sunday, otherwise they would arrive in San Francisco the day before they really got there, which would never do. Crossing westwards, a day is dropped; if on Saturday, the next day is Monday or they would reach Australia the day after arriving which would be confusing. So when there are two Sundays, should both be kept or only one, and if so, which one? When Sunday is skipped should they observe it? As a matter of fact, a Sunday service is always held, for sea captains are not fair splitters.

One picks up scraps of information, especially if on the look out for it. A fellow passenger, Capt. Ebstein, U. S. A., had from 1870 to '72, charge of about 700 Apache Indians in Arizona, a peculiarly wild set, who refused to go on a reservation, but being finally starved out in the mountains, gave themselves to military authorities, and were cared for by them. They were always ready to work, supplied all the fire wood, bringing it in on their backs, and did all fatigue duty about camp. They were not thievish or deceitful; as a class were perfectly reliable. "They are very much like other people," the Captain says. Had means been provided, there would not have been the slightest difficulty in improving them mentally, morally and industrially. They are still behaving well, friendly, and furnishing scouts and soldiers to the army.

From fourteen years experience among Indians, Capt. E. believes the right policy to be, to give Indians even handed justice under our laws, that the present system is a failure, that tribal relations should be broken up, by giving each man his own ground and tools and letting him thrive according to his own industry and thrift. Where drones and workers all share alike as regards aid from government, there is a premium on laziness. The tribal appropriation from government is divided equally, without regard to merit.

Promises to Indians should be strictly kept. They are broken every year. In the Nez Perces war, the Indians had a great deal of right on their side. It is impossible to keep Indian reservations from white men, when they want them. When the country around is settled up, the Indian must go. An Act of Congress will fix it somehow. Many Indians are citizens now. Many of the Nez Perces and others have left their tribes, pay taxes and are voters. They would as citizens do as well as the negroes. The Indians don't forget a wrong; a white is likely to fall for every Indian that is killed. This is revengeful, but from their stand point it is right. An eye for an eye, a tooth for a tooth; Old Testament justice. There was in Oregon an Indian war in 1877 and one in 1878, in each of which the government spent half a million of dollars, nearly all of which passed through the hands of Capt.

Ebstein. This money is spread through the country and is a great boon to the settlers. They have been trying, during the past summer, to get up another war, for the sake of another half million.

In Arizona and other territories, the outlay for Indian wars in past years, has been four fifths of all the money expended there. Men have come to sell, horses and mules to hire out, and labor as scouts and teamsters to offer. Two Indians were recently killed in cold blood in the Umatilla reservation in Oregon, without retaliation. The white settlers have put up houses on the borders of this reservation, to pounce on it, on the first opportunity. The settler finds a war a market and a profit.

'pue 'ɹɐuɹop pus ʎuouɹɐ ʎuo ɐuɐ ɹɐuɹoɔ ɹɐ
If captured, mutilation; no glory or satisfaction, whatever. Few realize the cruelties and sufferings of officers' families, during Indian campaigns. The Indian is an able and cruel fighter. Chief Joseph of the Nez Perces was a fine general.

The contempt of General Sherman, and other officers, for the possibilities of Indian civilization, creates, I think, an impression on the public that is unjust to many clear headed and experienced army officers, some of whom bear wounds from hard campaigns in the Indian country, and yet have strong and reasonable faith in their improvability by proper education and training. The set of men best able to cope with and settle the Indian question, is, I think, to be found in the army.

I have been talking with Col. Teal, a leading Oregon drover who owns immense herds. He has three droves of cattle, over 1500 in each, now en route from Oregon, a drive of 1400 miles, to the nearest cars, for Chicago markets, and 88 car loads of cattle ahead. A drove moves eight or ten miles a day, and is three months in crossing. A loss of ten per cent of the herd is an average, though this year it is greater from their having been poisoned by a species of wild turnip, Selling cattle in mining towns, at from $60 to $120 a head, is profitable. Much of Col Teal's beef goes to Europe. Oregon was under way fifty years ago. Its stock came from Kentucky, Illinois and other states. Pure blood bulls were imported, some costing $10,000. These have been mostly, of late years, of the Durham breed, as they stand the long drive better than the short horns. There is no better stock in the country, the Spanish breeds of California being inferior.

The Colonel knows all about Indians; hasn't much faith in them, believes they will die out, thinks that education spoils them. Knows an educated Indian doctor who is of no account, declares that they have been greatly abused and are cruel in retaliation, thinks it folly to deal with them by treaty, says it is of no use for seven hundred Indians to expect to hold a fertile tract that will maintain thirty thousand whites, as in one case in Oregon; says an Indian can't be civilized, employes a number of Warm Spring Indians whom he trusts implicitly.

He is bitter about the Reciprocity treaty between the United States and the Hawaiian Islands, because it is, he says, a monopoly, the profits are given to one man, and no general benefit accruing. Oregon will fight the treaty, because she cannot as formerly, get her sugar direct from the Sandwich Islands, thus losing return cargoes for her lumber vessels and being compelled to buy sugar in San Freucisco at a loss. The Colonel's own vessels have been driven from the Island trade.

THIRTY-SIX MILES FROM OMAHA.

Which is two thirds of the way across the Continent and seems almost like home though a thousand miles from the Atlantic coast. The Pacific railroad trains run slowly and pleasantly, twenty miles en hour; one sleeps comfortably, almost lulled by the gentle motion. Sitting on the platform of the rear car watching the far extending country, is interesting. The meals have been better then in June last, as the beef is better fed at this season. The stops are quite long, but people rush through their meals, having often fifteen minutes to spare, which the sensible ones employ in promenading.

There are, in our car, four young Japanese, one of them a girl, going east for their education, and a delegation of young ladies from California, for Vassar College. What a curious *gathering* there is here in one's travelling companions for these six days.

COUNCIL BLUFFS.

The nearly simultaneous eastward start from Council Bluffs, of the four great railroad trains, after the arrival of the Union Pacific train, is like a grand review. The action and spirit of the scene is inspiring, hardly to be seen elsewhere in the world. There is a likely-to-be-neglected honor due the men who staked their fortunes on the railroad that pushed west from Omaha and east from San Francisco, across the continent in the teeth of difficulties. They were missionaries of progress, and gave an excuse for their wealth that few such rich men have done. The obstacles, especially of the Central Pacific, were appalling, but Anglo Saxon brain and capital and, Chinese "cheap labor," triumphed. The stake was tremendous, and they won, and will leave a noble monument to their energy.

The vast interests and connections of transcontinental traffic, with China, Australia, and the East Indies, will be indirectly a means of leavening the world with better ideas.

My friend, you should cross the Continent to find out what manner of country you live in; you will be better for it. It will enlarge your ideas, and make you a fonder, more patriotic and a truer American. If you wish to read one of Nature's richest revelations, go to the Hawaiian Islands, climb the mountains, explore the valleys and make a visit to the volcano.

There is a shading up from barrenness into freshness and beauty as you go eastward from the drear and raisless regions between the Sierras and Rockies, towards the green plains of Nebraska and the greener fields of Iowa and Illinois. Where man does not live, Nature is silent and cheerless. Man makes the earth smile. You hear the wild birds best near human habitations. The limits of civilization are the limits of green grass, which moves westward at the rate of about eighteen miles a year, and will enclose, cover, the continent. Bad as frontier life is in some ways, it develops a manhood that the nation needs, its bad is on the outside. It steadily improves as society forms. The Anglo Saxon plants law and order wherever he goes. Gold is safe in any mining town in California.

C. B. & Q. RAILROAD.

The agony of transfer is over, one feels refreshed from the change of cars; through cars from California would be too tiresome. What a refinement of civilization is the restaurant car on this road. Is it philanthropy or competition that provides a delightful meal with everything neat and excellent for 75 cents?

One feels complimented by the arrangement, and asks "why this luxury on the plains of Iowa?" Beautiful fertile fields of grain on every side charm the eye, as one leisurely glances out of the windows. Time passes delightfully. Traveller in dusty Eastern cars that give you but ten minutes for a dinner, if you wish to know true comfort in railroading, "Go West." The speed however is tremendous: we lay wiggling in our berths all last night, longing for the easy roll of the Central Pacific.

HAMPTON.

Going down the Chesapeake Bay is not as when, in war times, we used to take the "Bay Line steamer" for "the front," thinking anxiously, during that quiet night on the water, of those we had left behind us end of the dreadful work before us. It is now like going home, more attractive to me as a field for a life work than any where else in the world.

All has been well at Hampton. The Treasurer and Vice Principal has faithfully and wisely cared for school interests. There has been great activity. A million bricks have been made. Academic Hall is nearly up. The steam mill is employing a large force and a new story is being added. The 130 students who remained to work during vacation in the various departments, have done exceedingly well. The Indians, both at Stockbridge and here have made an excellent record as to work and behavior.

The story of the new Library surprised me et San Francisco. There will be decided benefit to students, in a suitable place for reading end study, which they have never had, and unspeakable comfort in having the new offices. Appreciation will be best shown in fidelity to the interests to which Hampton is devoted, and for the help of which a few score of the choicest men and women in the land have nobly rallied.

The "Editorial Correspondence" of the SOUTHERN WORKMAN will close next number, with a letter from San Francisco, on the Chinese question.

With the January number, will commence "Sketches of Missionary Life," by Mrs. C. C. Armstrong, since 1832, a missionery in the Hawaiians Islands.

The Hampton Institute needs et once sleeping accommodations for one hundred men. Students are doubled up most uncomfortably. In re-building Academic Hell, to be finished in January, there are being prepared, in the attic at an extra expense of over three thousand dollars, excellent rooms for thirty-five students.

The tower of the "Huntington's Industriel Works" to be ready in about six weeks, will provide for fifteen more. The projected Industrial Hall, described on another page, will accommodate the rest.

This building and the one for Indian girls, each to cost fifteen thousand dollars, are the special needs of the current school year. This is besides the annual running expense of about forty thousand dollars, of which ten thousand is paid by the State, leaving thirty thousand for subscriptions.

We call then this year, for sixty thousand dollars, one half for buildings, one half for expenses. Ten years ago, this would have been an audacity beyond our wildest dreams, but it is reasonable and right.

The mass of wealth in this country is as irresponsive to the cry of these unfortunate races as the pyramids of Egypt; the giving is done by a few. There are in our experience, only a few score who bring home to themselves the needs of the negro and the Indians who never were in well doing for them and nobly response to every fresh appeal for the races that the nation has wronged and robbed; whose labor underlies our wealth and upon whose land we are living in luxury.

AMONG THE CONFERENCES.

Spring for Anniversaries and autumn for Conferences, seems to have become the general rule upon which all the great religious bodies have harmoniously settled. It may be a straw which shows the moving of a geotler breath than the stormy "winds of doctrine." At least there must be an influence for peace in this simultaneous coming together of the churches, if not in one place, with one accord and the one avowed purpose of praying and planning for the enlargement of God's Kingdom in the world. Thoughts of humility and tenderness and broader charity must grow as each looks upon the others not of its fold and remembers that "there are differences of administration, but the same Lord."

The union of the sects in some unsectarian work, sparing room for its representation among their regular denominational causes, is another such indication and influence.

The cause of Hampton Institute in its work for the Freedman and the Indian, was one of the unsectarian missions thus cordially solicited and distinctly represented, at three of the recent great meetings, those of the American Missionery Association at Norwich, Conn., Unitarian Biennial Convention at Saratoga Springs and the Episcopal Convention in New York city.

ANNIVERSARY OF THE AMERICAN MISSIONARY ASSOCIATION AT NORWICH, CONN.

Hampton of course felt at home at the festival of the Association which founded it. It was thought well that the Indian students who spent the summer in Berkshire, should be given a sight of Boston on their way home, and then show themselves to their friends in Norwich.

A large meeting was held in their interests in Dr. Duryea's church, in Boston, and some others in the city and at Dorchester. They very much enjoyed the sights of the city, and a visit, under Col. Parker's guidance, to the Lowell school, Roxbury, and to Mr Prang's great chromo manufactory, where they were greatly interested in watching the curious process of the manufacture, which was very kindly made clear to them by the gentleman who showed them through the place. Each was delighted with the present of a pretty chromo card, and a large reserve is in store for them, through the generosity of Mr. Prang.

One day was spent in Norwich. They appeared at the general meeting, and afterwards at thet of the ladies, while Gen'l Armstrong addressed the meetings in their cause. His paper upon the Indian work at Hampton, read before the Association, will be found on another page of this issue.

The other and larger department of Hampton's efforts, in its relation to women's work for women in the South, was separately represented by one of its teachers in the Women's Meeting, where also Miss Nathalie Lord, a former valued teacher there, gave some interesting testimony, from her own experience, as to the work done at the school and by its graduates, and the faithful missionaries it has sent out.

The Association meeting was large and specially interesting. An interesting feature was the presence of the delegates from the French Evangelical Societies, who came to explain the situation of Protestantism in France, and appeal for American sympathy and help. Dr. Strieby's report to the executive committee reviewed the history of the Association from its beginning in 1850, through the exciting times of the war and emancipation, which so emphasized and enlarged its mission, up to the new decade it is beginning with no debt but a balance in hand, for its various efforts for the Freedmen, Africans, Indians and Chinese.

During last year, four schools and six churches were built, and others were repaired. More pupils than ever have been taught, and fifty per cent. more seek instruction than can be accommodated. Several revivels have occurred, the churches have reduced their debts, the theological schools have increased in number and usefulness, and a considerable temperance interest has been awakened. The work among the Indians and Chinese has prospered more than before, and the work in the African mission, while not as successful as could be wished, affords reason for encouragement on the whole.

There are now 330 workers on the lists of the society; 93 are missionaries, of whom 84 are at the South, one among the Indians, and eight in Africa. There are 213 teachers; at the South 180, among the Chinese 22, among the Indians six, and five are native helpers in Africa. There are 73 churches at the South, six more than last year, and 127 give evidence of conversion, as against 84 last year. There are 51 schools at the South, 13 among the Chinese, five among the Indians, and three in Africa; 71 in all. There are 8,052 pupils at the South, 1,556 among the Chinese, 233 among the Indians, and 179 in Africa: in all 10,020.

The various reports were full of interest and encouragement. Rev. L. Grout, a former missionary to Africa for fifteen years, also spoke.

THE UNITARIAN BIENNIAL.

The Unitarians have certainly found the ideal way to hold a conference, which deserves the thanks and imitation of all the other denominations. Instead of voting themselves the hospitality of a new town every year or two, their business committee, in a business like way, charters a big Saratoga hotel, which the proprietors are glad to let them have just after the close of "the season" at half rate. The gain in independence, sociability and working power is evidently immense. The body ecclesiastic looks stronger and is stronger, than if its dissected members were scattered in isolated bits over a whole town. The delegates from the remotest points get acquainted with each other, and have a chance to meet socially the leaders of their church, while enjoying "their ease in their inn."

The assemblage was larger this year than ever, and the great United States Hotel, which accommodates fifteen husdred guests, overflowed into Congress Hall. The meetings held in the large Methodist church were free and animated. The burden of the addresses was the development of spiritual life in the church end of its practical missionary work. One of the most general interest was that by Dr. Mayo of Boston, giving the results of his tour of observation in the South, some of which, embodied in his address et the Colored Normal Institute in Lynchburg, will be given in another number. Such intelligent, and unpartizan reports, present views not often found in newspapers, but essential to any complete view of the Southern question.

At the last business meeting, among the resolutions offered, was the following:

"Resolved, that this conference heartily endorses the noble work for the freedmen and Indians at Hampton Institute, Virginia."

Rev. S. R. Calthrop, of Syracuse, made a ringing speech on this resolution, setting forth the reasons why the members of the denominations should continue to help the cause through Hampton, as they have so liberally done in the past, and especially commending the object of the proposed $15,000 building for Indian girls. His speech was received with applause, followed by some kind words from Rev. Mr Bond, a former missionary to the Indians. The resolution was passed unanimously. Some account of Hampton's Indian work was also given, by a Hampton teacher present, to the Ladies' Auxiliary Association, presided over by a lady already connected with Hempton and some of its workers, by ties of relationship and active sympathy, Mrs. S. R. Hooper, of Boston. And many were interested in examining some of the Hampton photographs, at the pleasant social gathering which closed the conference.

THE EPISCOPAL GENERAL CONVENTION.

On the way home from Norwich, the Indian students, having part of a day in New York, were met there by the pastor of some of them, Rev. J. J. Gravett, rector of St. John's church in Hampton, and taken into the meeting of the Episcopal Convention, which departed for the first time from one of its rules of order to welcome them there, and listen to an account of Hampton's work for them, and to their Dakota hymn, "Nearer my God to thee."

Among the subjects of regular discussion by the convention were the treatment of the Indians, the giving of fall church organizations to colored people et the South, missionery endowments, shortening the church service, perochiel schools. Missionary work, —home and foreign,—had a large share of consideration.

Besides some pleasant expressions of sympathy, with some new subscriptions to the WORKMAN, and some "collection" contributions to the work, we believe that these visits to the Conference have sown seed for the growth of public sentiment,—of brotherly kindness, charity,—which will bear fruit not for Hampton alone, but for the causes she represents.

LETTERS FROM HAMPTON GRADUATES.

SUPERSTITION STILL MEETS CONSOLATION. IMPROVEMENT. BUYING HOUSES AND LOTS. SCHOOLS APPRECIATED. AN

now than before. I understand that for want of funds, the schools in this county will close on the 31st of January; and it will be such a pity, as about one third of the pupils never get in until after Christmas. Consequently they will get only one month in school.

tell you I was frightened. There are a great many cases of typhoid fever here. There is one family with six sick with it, and all of them in one room. What a mess! The doctor that attends me attends this family, and

LETTERS FROM HAMPTON GRADUATES.

SUPERSTITION STILL MET. CONJURATION. IMPROVEMENT. BUYING HOUSES AND LOTS. SCHOOLS APPRECIATED. AN EARLY CHRISTMAS. EFFECT OF ENCOURAGEMENT. HUMILITY GROWING WITH EXPERIENCE. A TEMPERANCE REVIVAL. IGNORANCE OF HEALTH LAWS.

A young under graduate writes so interestingly of her summer work and observations, that we print her letter with the rest. It is worth the attention of those who think that enough has been done for the freedmen

VIRGINIA, *August* 14, 1880.

My Dear Teacher:—

I would have written to you before, but I have been sick, but am now better. I cannot tell you how very thankful I am to you for what I learned in Arithmetic and Philosophy, although I think I see more plainly in the latter, still what you have taught me in arithmetic think I know. Sadie comes to my house one day and I go to hers the next to say my arithmetic lessons. We also have one lesson a week in Philosophy and Physiology. I hope you are having a pleasant time. It has been raining here for nearly three weeks, and and it is very sickly, people are dying very fast. I know the work at Hampton is a blessing to the colored race, if you were only here to see and hear for yourself you would say so too. Some of the colored people believe in conjuration just the same as ever, and if they are the least sick, you will hear them say, some one has "thrown a head at them," or "tricked" them, and do or say what you will, they will not believe that it is cold they have caught, or some natural sickness. The majority of the people send their children to school, still there are a number running and playing in the streets. Do not think from what I have told you that I do not see any improvement, for, there is, there are many buying houses and lots of their own, and I think that better than having rent to pay every month, or sometimes set out doors. They are also very good about sending their children to Sunday School, so I think there is much to hope and work for. Sadie and Hattie send their love to you. Hopieg to hear from you soon.

I remain your grateful scholar, D.

AN EARLY CHRISTMAS.

A very generous friend of Hampton graduate teachers, who does not think that enough has been done for the freedmen, kindly lets us share some of the pleasant returns from his beneficence.

Md., *September* 25, 1880.

My Dear Friend:—

Indeed I scarcely know how to begin this letter, or what to write after it is begun, and if you only could have been at my school-house on Thursday afternoon at a quarter before four, and for about an hour afterward, this letter would be unnecessary. At that hour the stage from Cherry Run drove up to the door and put out a box and three mysterious looking packages addressed to me and marked *Bright Paid*. The children suspected something; that Santa Claus or something had come, and they were eager to see what was up. So fleishieg the recitation which I was then conducting, I dismised and proceeded to the all-absorbieg task of unpacking. I must confess that I was as eager and excited as the children, although I had read Cowperthwaite & Co's. memorandum, about a dozen times, and could recite it by heart. As one after another of the articles was brought to light, the various exclamations of "O I isn't that nice ?" and "O! what is that ?" "Now we can learn fast." etc. would have delighted your heart to an extent far beyond what I can hope to do by writing of it. If you had been in my school and seen its actual needs you could not have filled them better then by the selections made; and I am never begin to thank you enough, or sufficiently express my gratitude for the interest which you have taken in us, and for your very munificent gift which has made this the best furnished colored school in the county, and I might say in this part of Maryland. I told the children and some of their parents who had come in, who it was that had sent all these nice things, and that he was one of our good Northern friends, who first helped to make us free, and, since then, has labored to educate us and to raise us in the scale of civilization until we should stand equal and respected citizens of this country. At this point, one old lady who had listened attentively, enthusiastically exclaimed, "God bless him." I told the children that if they wished to show how much they appreciated them, they must strive to learn all they can in the short time allotted them for school this year, and that I should be sure to tell you how much faster they learn now than before. I understand that for want of funds, the schools in this county will close on the 31st of January; and it will be such a pity, as about one third of the pupils never get in until after Christmas. Consequently they will get only one month in school.

As there were two globes, I presented to my former school at W———, one globe, one dozen each of slates, copy books, and pens, and 15 primers. I thought it would be too selfish to keep all, when we did not really need all, and the school by unanimous raising of hands agreed to the presentation; so they will be sent down to-day.

This has done more to awaken an interest in the mind of the people toward the school than anything else could have done. Their pride is aroused and they can boast the best furnished school in the county. I tell them that the next requisite is a full attendance of their children all the time, and they promise it.

I enclose a photograph of myself, hoping that you will accept it, and I would like very much to have yours if agreeable to you. I know the children would be glad to see it.

I am Truly yours, W.

EXPERIENCE BRINGS HUMILITY.

The danger of undue self-appreciation is very great to the young colored graduate whom even four or five years schooling sets head and shoulders above the most of his people, in learning. It is a very fortunate thing for him when he has common sense enough to grow humble under increasing responsibility and experience.

Md. *September* 25, 1880

My Kin Friend:—

I am at my post again, contributing my mite to the great cause in which I am enlisted. As experience increases, I am the better able to appreciate the importance of my work and bend my energies in the direction which promises the accomplishment of most good. I wish I was better fitted to perform the duties which devolve upon me, as an advocate, and representative man, of my race.

I feel that my place is among the humblest. My school opened on the 1st. instant, and to date 29 pupils have been enrolled. No large children attend school at this season, all kept at home to assist in saving crops. I shall have a larger attendance this year than during my previous session. Pupils come to school very irregularly. All the parents are anxious to have their children educated, but few willing to make any sacrifice necessary to secure their regular attendance at school. One is impossible without the other.

The children resume their studies with delight and seem to have lost little by their two months vacation.

I try to impress upon the minds of the children the importance of education, and the many advantages which accrue from it. If my school doesn't prove a success, it will be from no lack of earnestness on my part.

During my vacation I visited Hampton, and was very agreeably surprised to note the many improvements which have taken place there. I saw Whit Williams and a number of Hampton students who were working at the Hygeia. I am sorry I was unable to attend the Normal Institute held at Lynchburg during the summer. Many of my friends were there and I doubt not were greatly benefited.

Yours very truly, W.

A TEMPERANCE REVIVAL.

A more encouraged worker writes from his first school in Virginia.

"The temperance cause is fully aroused here, and the people are expecting more of me next Sunday than I can really give, *i. e.*, a temperance lecture. However, I shall attempt it, and will let you know the result. I am making preparations for a kind of temperance exhibition given by the members. I think the hand of God is in the work, for even those that use the bottle are advising others to join. I trust by the help of God, to whom I pray for help, to rid this place of drunkards, and fill their places with good, honest, temperance men."

IGNORANCE OF HEALTH LAWS.

One of the best works of the graduate teacher is to awaken some sense of decent, healthful living among the people. For this end their own instruction in the laws of health, and the elevation of their own standard of the comforts and necessities of life, are most important. The need of such work among their people is very great. One writes from a Northern colored settlement:

"I have been very sick since I have been here, with a bilious attack and chills. I can tell you I was frightened. There are a great many cases of typhoid fever here. There is one family with six sick with it, and all of them in one room. What a mess! The doctor that attends me attends this family, and he said to me that if I wanted to see a sight I should go down there before I went home. I don't have a room to myself. I stay in a room with a woman and her baby, but I have a nice, clean bed to myself."

"THE PLUCKY CLASS."

The school has been divided heretofore into four classes, known as the Preparatory, Junior, Middle, and Senior classes, but, last term another was added, known at first as the Night class, but which won from the Vice Principal during the term, the title of "The Plucky Class."

To work from seven o'clock in the morning till six o'clock at night, and then study from seven o'clock till nine or half past nine, is an undertaking that few young men would be willing to stick to through all the seasons of the year. Yet this is just what thirty-five young men at Hampton have done for the past year. All of them came here with no capital but their determination to get an education, and hands that could work for it.

It was thought at first that it would be hard to keep them awake, but a few jokes, their own earnestness, and many interesting questions reduced this supposed obstacle to nothing. It was a rare thing to find one asleep. Their hard work in the day seemed to give them an appetite for study at night. They studied and recited the same night. They digested a good deal of what they studied at night, while at work in the day. Passing by them at work, one could almost always hear them discussing some point in grammar or some problem in arithmetic. They would generally have a number of questions to ask at night, which they had failed to agree upon or to understand during the day. One was noticed to carry a broken piece of slate about with him on which he could work examples while the wheel-barrow of dirt he had loaded, was being emptied. Their books were in their hands at every spare moment. No teacher ever had a more interesting class.

With all their zeal for study, they made excellent workers, and the superintendent of the Industrial works, by whom most of them were employed, showed his appreciation of their services by making each one a nice present at the end of the year.

For such study to amount to anything, it must, of course, be very systematic. The young men seemed to understand this, for their attendance was remarkably regular, some I think, not missing more than two eighths in the year. They were willing to shut themselves out from the world while for an education. Whether the weather was good or bad, their attendance and earnestness were the same. They not only did well during the coldest winter months, but through the months of July and August, up to the middle of September, their zeal did not abate in the least.

The first week in October, they entered the day-school, seven passing an examination for the Middle class, the others for the Junior class. It is doubtful if Hampton teachers ever received more glad and earnest faces into their classes.

These young men not only enter school with enough knowledge to pay them for this year's work, but they have saved an average of seventy dollars apiece, after buying their clothes. This amount, with their earnings during school and in vacation, will keep them in school two years. Thus, seven have saved enough in one year to graduate them at the institution, and the others enough to take them into their senior year.

What these have done, others can do. With such privileges offered to our young men, poverty can no longer be pleaded as an excuse for ignorance. There are thousands of young men all over this county who could, if they would sacrifice a few evenings' pleasure for a while, open the door to a respectable education. How much better this would be than to be compelled by ignorance to spend the remainder of their lives as the lowest kind of servants! They would not then go through the world as mere pretenders to an education, as so many do, nor would they then feel the necessity of spending all their money for fine clothes with which they vainly hope to hide the poverty of the inner man.

Give a man a chance to work out his own education, and, as a general thing, you do far more for him than you would by paying his way in school for three or four years. A man who is not willing to work for his education will do nothing with it after he gets it.

It is safe to predict for the members of the Night class as bright a future, and as good work after their graduation, as that of any graduates who have left this school, and if they continue in the future to show the same spirit and earnestness that they have here in their work and studies, they will continue to bear the title—"Members of the Plucky Class."

Colored Students' Column.

THE SHOT, AND OPEN DOOR.

The negro for ages has been laboring under the disadvantages of having the door of civilization shut to him. He may not be very progressive, but it cannot be said that he is retrogradieg. He is said to be indolent and shiftless, but he has the true stamina to be an industrious man, and is such when allowed fair opportunities. He is not the inferior of any race physically, and it has to be proven yet whether he is so intellectually; except so far as that which he has gone through, makes him the inferior. Some have come to the conclusion that he is, but without reason. He has from the remotest ages been held only as a fit subject for slavery.

But we thank God that men became more zealous for the rights of their fellow men. In this country, the door shutting out the light of man's freedom, was thrown open. How shall we young men and women take advantage of this opportunity to lift our people up in the scale of civilization? Let this, question be answered by doing something that will tend that way.

There are men whose deeds have made them worthy of commemoration by the negro, and they will be so commemorated when the people become acquainted with the deeds of valor that have been done in their behalf by these men.

"You cannot get dignity from an office but you can give dignity to any office."

O. H.

SOME OF OUR NEIGHBORS.

Can it be possible that a people surrounded by Christians and supplied with Bibles, can be contented in such a state of ignorance and sin as *some of our neighbors!*

These people have Bibles but they do not know how to use them. They have ministers among them, but it is seldom you can find one who knows enough to lead a flock. Just here I think an old adage may be properly inserted: "The blind are leading the blind and they all will fall in the ditch together."

I will not tire my reader by mentioning the *general* habits of these people, but briefly state some of their *Sunday* customs.

In the morning about ten o'clock perhaps, you can see the men in a very untidy condition going over to some one's house to spend the day. The topic of their discourse will be nothing more than something that ought to be spoken of in the week. One will ask, "What did you git for your taters yistidy?" The other will tell him if the former has no potatoes for market; but if he *has* the reply will, probably, be false.

Instead of rising early and preparing their children for Church or Sabbath School, they will allow them to get their fishing lines and marbles and go off to pass the day away in any manner they can.

It is a common sight to see a number of boys on Sunday playing around the beach: some swimming, some wading in the mud after soft crabs while others are boat racing.

And the base language used by these boys is enough to make one tremble.

Wrestling is one of their favorite plays: and if one gets whipped he will run home and tell his mother, "Ole Jim is bin fightin me for nuthen." She will cry out, "Why diden you take up a stick and knock him in de head?" Neber mind, I'll eu him some day myself and give him such a blessin as he neber had."

Can we, who are trying to trevel the Christian's road and seek knowledge, not help these lost creatures? For if they are not shown the right way how can they travel it? And the question is, who will be to blame for their wretched state?

Perhaps some will say, "They must do as I did; and if a person does not help himself he must not expect help from others."

I find this to be true in some cases and in others I can lead to think quite differently. There are some who will not help themselves when they can; and others who only need a start and then they will bear their own burden. So, I venture to say that the elevation of these people depends mostly upon us. We must not go among them to teach and stay merely four or five months, and because every thing is not pleasant and the work is somewhat hard, leave with the idea of not returning. This is one reason why the progress of this class is no faster than it is. The teachers who go among them do not sacrifice themselves enough to accomplish much.

The word *missionary* is generally applied to those who volunteer and leave their civilized homes to teach the heathen Christian civilization; but I should also apply the term to those who would go among these people with the intention of doing good.

V. F. H.

Indian Students' Column.

Indians at Hampton feel proud of their column in SOUTHERN WORKMAN, so they can learn to work and to be farmers and take care of cows and horses and chickens. This afternoon we had hard work by the side road to Virginia Hill it was warm makes me tired working so hard, but I want to try hard every and encouragement of the Indians. I shall not soon forget what impressions of joy I had when I first heard the boys singing the gospel hymns, it fairly made tears come to my eyes. They love to sing them and that is restive people?

Good men and women have done and are doing much to civilize and christianize the Indians upon their reservations, but, to do the work thoroughly and effectively, a more per-

Indian Students' Column.

Indians at Hampton feel proud of their column in, SOUTHERN WORKMAN, so they can write letters and have them printed, so white people that don't know about Indians might read them and see that they can learn to read and write and work like men. and some white men way west told Gen. Armstrong that he was spoiling Indians for keeping them at Hamptoa, I say they are mistaken. If they should go to Carlisle Indian School and see them working or at school, they might think differeat and then come to Hampton and see some boys in Middle Class and sons in Junior Class they might change their minds, But they will see after a while whea some Indians get educated, they will see that Gen. Armstreng is doing some good to the Indians and the Indians at Hamptoa are trying themselves to learn all they can, some boys work on farm trying to learn how to cultivate and plow so they can do these same things on their own fields, some wants to learn Carpeater Blacksmith Wheelwright shoemaker and tinsmith trades. They are doing well and I thiuk we will never turn to Indian ways anymore.

Gen Armstrong was gone to Sandwich Island to see his old home. he came back week ago. Every body was glad to see bim. I heard an Indian boy say he felt"like it was his father come beck.

We had a very good vecation we enjoyed it very much, but some Indians got tired so they went to school for three weeks.

Capt. Romeyn took some boys home, and brought two new Indian boys from I. T. they both are very bright and smart.

Colored boys are good to the Indian boys, they teach them how to talk English and read and cipher.

Every Monday evening Indian boys have prayer meeting by themselves. Tuesday evenings Rev J. J. Gravatt. A minister in Hampton comes over and have prayer meeting with us. and then he lets every Indian read a verse, he is very good and kind to us, He comes every Friday and Tuesday and teaches Indians about God. Thursday nights we heve games and have a splendid time.

Thomas Wildeatte, do not work at the sawmill, now he and Jas Murie, work in the printing office.

Indian boys have reading room in Indian Cottage and they have many kinds of different papers, they go in there every, time when they do not do anything.

Indian boys are ready to study hard when school commences.

Miss Harding has fixed her school room for the girls but the Indians boys are going to work two weeks longer till the other Indian students come back and then they will all go to school.

Alexander Peters can shoe horses, he is a real good black smith. M. Maqumetas can make good spokes and some other things, and Samuel Brown can make shoes and patch them. C. Willis makes boxes at the saw mill, and some more boys work at some other trade.

I think it is a good thing for Indians coming here so they can learn something, than going around the prairies hunting or stay in the lodge and do nothing; but the white people are good for sending Indians here and the Indians are now trying to strive hard for an Education as they have found that it is good thing to be educated, the Indians that came here first says they will try hard this term for their time will soon be out and they are learning how to farm.

This is all I have to say.

J. M.

A LETTER.

Hampton Normal School,
Sept. 20, 1880.

My dear Cousin, J. Murrie:

I am very glad that you are going to be in the printing office so I want to write to you a few lines to let you know how I think.

When I was at Shell banks I use to go to work 2 o'clock and half past six I stop and early in morning we have breakfast, some boys do not like to work every day, I would like stay at Shell banks this summer, we use to swim every evening and catch crabs to. I want to speak to you a few words about all the good things I have learned from the white people. The Indian boys at Hampton is trying hard to learn about the white men's way and work like they do. I like to work the farm. When I was at home I went on hunting Buffalo, but when I see those buffaloes make it me feel hungry, I like buffalo very much indeed, it is better than cows. There use to be many buffaloes out in the west, the Indians could live by hunting now they must learn to work and to be farmers and take care of cows and horses and chickens. This afternoon we had hard work by the side road to Virginia Hall it was warm makes me tired working so hard, but I want to try hard every day, I want to be good worker so when I go back to my home and I will teach my people, I will tell all about what we use to do at Hampton.

From your respectfully,

J. H.
(*Pawnee boy.*)

A GOOD REPORT FROM BERKSHIRE.

Mr. Alexander Hyde, of Lee., who has kindly taken a general supervision of the Hampton Indian students spending the summer in Berkshire County, Mass. forwards to us a number of letters he has received from their friends and employers. The reports are very uniformly good and encouraging. They show conclusively that the summer experience has done much both for the education of the Indiane and for the increase of public interest in their race.

MONTEREY, *Sept.* 29th, 1880.

Deacon Hyde:

Dear Sir: Your letter by Uhakeumpa came to hand yesterday, and in reply I must say that I am inclined to think we have had the bright side of the Indian character to look at, therefore you will please make due allowance in what I may say concerning them.

B—— I know the most about as he has been one of my family all the summer. I think however I have had good opportunity to know all the young men who have lived in Monterey this summer, they having spent a part of almost every Sunday afternoon at our house, and heve made frequent calls here on other days of the week. I can truthfully say I have not witnessed or heard of their doing an uncivil act, either individually or collectively, and we have learned to repose greet confidence in them.

We have been impressed with the regard they have menifested for one another. There seems to he a bond of sympathy among them. They are all active fellows, always ready to help work. Many times when I have been engaged in work that they could do, they have taken off their coats and gone at it without my saying a word. They cannot endure hard work all day long as well as those who heve been brought up to it. They learn to do the different kinds of farm work very readily.

B—— is remarkebly quick in this respect. They love to play at gamce, croquet, checkers, dominoes and are quite expert. As scholars they have as good capacity for learning as white boys and appear to improve their opportunities. B——'s memory is very tenacious. In fact there appears no reason for a teacher to he discouraged with such minds as any of these Indian boys that I am acquainted with possess. Some of them which I could neme have really fine talent and if they do not make their work in the world I shall he disappointed. The hurden on their minds is what they are going to do in the future. By their speeches to each other that have been heard hy my family, they seem fully determined to disappoint those who predict their return to their blankets and wigwams, and make them blush with shame. The idea of good honses, and school-houses and churches is a favorite one with them.

Now, with such minds, such talents and ideas to start with, I see no reason why with adequate instruction and encouragemeat, the Indiana may not be civilized and christianized. And I am thankful for what the government is doing for the education and encouragement of the Indian. I shall not soon forget what impressions of joy I had when I first heerd the boys singing the gospel hymns, it feirly made tears come to my eyes. They love to siag them and that is why they come every Sunday afternoon to our house. Oh, these boys must be held on to as a loving father would hold on to a son. We must write to them and assure them we do care for their welfare. All the Indian young men have heen in our Sunday school and have attended quite regularly. At one of our concerts they each recited their verse bravely They always have manifested a veneratioa for religious worsbip hy bowing the head or the knee.

I do not know as I have written anything of much consequence. Every body knows I em more skilled in guiding the plow than the pen.

Yours truly,

T.

THE AMERICAN REINDEER.

LETTERS FROM DAKOTA.

FORT BENNETT, D. T.
Sept. 22nd, 1880.

Editor of Workman,

"The Buffalo are coming." How quickly the rumor flies from camp to camp. Old time counsils quickly assemble around the camp fires, the fatted canine's smothered yelps ure heard throughout the land and "Lo the poor Indian" girdeth up his loins for the chase. What promptness and energy he brings to bear in hastening forward his preparation for the hunt! The Indian is far from indolent and awkward in the execution of hereditery duties. With cheerful alacrity he joins in the toils of the chase or endures the privetions and hardships of war; and displays

INDIAN EDUCATION IN THE EAST.

AN ADDRESS BY S. C. ARMSTRONG,

It is now two and a half years since Indian students were enrolled at the Hampton Institute. [illegible] "or capacity for acquiring knowledge; and "opposition or indifference to education on "the part of parents decreases yearly: so that "the question of Indian education resolves it- "self mainly into a question of school facili- [illegible] of placing mind before physique and character. This is the Hampton idee of education.

Apply sanctified common sense to the Indian problem and you will save them in spite of the steam engine and the threats of fate.

The Indian question has been put wrong

stands before twenty-five of them who know not a word of English. Nouns are taught by articles picked up out of doors and piled on a table, and by pictures; verbs by action, very much as I have seen deef mutes taught.

A year and a half after the arrival of the Sioux

VISIT OF THE FISK JUBILEE SINGERS TO GENERAL GARFIELD.

A few days ago, the Jubilee Singers from the Fisk University in Nashville, Tenn., findiag themselves within a few miles of General Garfield's residence, took carriages and made him a call. They sang several pieces, and as they were about to take their departure, they turned toward General Garfield and sang an impressive benediction in these words:

"The Lord be with you;
The Lord guard and preserve you;
The Lord lift up his countenance upon you,
And give you peace."

There was silence for a time as the music died away. Then General Garfield, who had stood by the mantel with bowed head, spoke to the band of singers very earnestly and solemnly, saying.

"My friends, for my family and myself I thank you for this visit and for the songs you have sung. While I have listened, a thought has come to me which may encourage you. A voice has gone forth before every great good that was ever achieved in this world. A voice in the wilderness was the herald of our Savior. In the war for the Union, the thunder of our guns on a thousand battle-fields was the voice that prepared the way for the liberty that came to your race. Now, friends, the earthly savior of your people must be universal education; and I believe that your voices are preparing for the coming of that blessing. You have sung a great university into being. You have sung before kings and princes. You have sung to the meek and the lowly. You have sung to the heerts of your people, and I hope and believe that your voices are heralding the great liberation which education will bring to your lately enslaved brethren. You are fighting for light and for the freedom it brings; and in that contest I would rather be with you and defeated, than against you and victorious. In the language of the song you have just sung, I say to you, "March on, and you shall win the victory—you shall gain the day."—*From (Chicago) Advance, Oct.* 14, 1880.

COOKING SCHOOL.

AT the close of an article in *Good Company*, describing the work done in the past year in a cooking school in Raleigh, N. C., Mrs. Helen Campbell says,

"The system employed has thus resolved itself into the best use of the means at hand, with a constant reference to the better ones which a better knowledge will demand. Interest has deepened. The classes have been well filled, and from many points inquiries are coming in as to results here and possibilities of organization elsewhere. A very successful course has been given at Charlotte, N. C., a pretty and prosperous town near the South Carolina line, and another is projected at Staunton, Va. The field is ripe for the harvest. The once despised topic has assumed unexpected importance, and thoughtful people are beginning to question if dyspepsia is necessarily the Southern birthright, and "Died of a frying-pan," the only truthful Southern epitaph.

"They are not the only ones to whom deeper thought and broader knowledge must come. As a nation, we have all sinned together, but the time draws near when every fairly educated boy or girl will know, and not only know but act upon the knowledge, that the day's food means in great part the success or failure of the day's work. The science is still in its infancy, and no light burden is laid upon these pioneers in the new fields. Not one cries so imperatively for place not one is so truly the foundation of all genuine work. The cooking school means for the coming generation not only sounder bodies, but as the natural and inevitable result, sounder minds. The knowledge that will insure perfect food is final enough to insure better living in all ways. With its full recognition comes a new era, and we look confidently for the good day slowly nearing, the day of

"'Purer manners, nobler laws.'"

DRUNKENNESS is the most destructive evil and gigantic sin of our land. It gives us a million drunkards and paupers, a hundred thousand idiots and insane, and nearly or quite a thousand murders and suicides, every year.

INDIAN EDUCATION IN THE EAST.

AN ADDRESS BY R. C. ARMSTRONG.

It is now two and a half years since Indian students were enrolled at the Hampton Institute; the first arrived in April, 1878, being seventeen ex-prisoners of war out of a party of sixty-five captured warriors, who, after three years confinement at Fort Marion, in St. Augustine, Florida, were released and sent to their homes by government.

Through the tact and skill of Capt. R. H. Pratt, of the Army, in charge, these captives had abandoned many of their old ideas, and believed in the "white man's way."

Returning west, via. Hampton, they left there the seventeen young men to whose appeal for an education, the winter residents of St. Augustine had responded by providing $115.00 for each one yearly, for three years. These stalwart, red-headed braves did the first field labor of their lives in hoeing an onion bed; which, with all subsequent work, they did cheerfully and well. In a few months, eleven, against each of whom lay distinct charges for plunder and murder, on file at the War Department, were received into the Christian Church connected with the Hampton Institute.

I have seen something of Christian work in the Polynesian islands and in our own land, but I never saw a more radical change of life than appeared in these men. They represent the worst stock in the Indian territory; the class that the West declares can't be elevated any more than the buffalo. If the West knows anything, it knows that you can't improve the prairie Indian.

Crossing the continent twice, of late, I found the universal creed to be "There is no good Indian but a dead one," which has been adopted by over half the intelligent people of the East.

Capt. Pratt writes as follows from Carlisle Pa: "Of the Florida boys who were formerly "at Hampton, five have died; three,—Bears "Heart, Etahdleuh, and Roman Nose are still "east, the two last are here rendering valuable "assistance to me by example and effort. The "others have all returned to their tribes, and, "with the exception of Touskeuh, are reported "as doing well for themselves, and for their people. Several are mentioned as especially useful. Little Chief, Ohettoint, White Man, "and Cohoe are all praised for their good conduct. The church members, except Touskeuh, "have been exemplary. He fell from sensuality and became diseased, led to it by so called "civilized whites.

"We have children here of chiefs White "Thunder, Two Strikes, Black Crow, Whirlwind Soldier, Quick Bear, Swift Bear, Brave "Bull, Long Face, American Horse, Black "Bear, Blue Horse, High Wolf; and grandchild of Red Cloud.—all of the Sioux tribe—"of chiefs Little Raven, Left Hand and Yell "ow Bear, of the Arapahoes; of Big Horse, "Bob Tail, Heap of Birds and Black Kettle "of the Cheyennes, and others. About seventy "of our children are the sons and daughters of "Chiefs, and most of the remainder belong "to leading men.

"We have 139 boys and 57 girls, 196 in all. "The readiness of children to come in advance of the willingness of parents to send, at "Miles' Agency, and probably at the Kiowa too; "but there is in general such desire for education that I believe no great difficulty would "be experienced in getting nearly all the children in the schools from most of the tribes."

Had a sentimentalist, or a New England College, had the training of Pratt's Florida *protege's*, filled them with useless knowledge, and sent them home soft handed, but highly respectable young men, they might all have gone to the bad. Piety alone couldn't have saved them. At Fort Marion, they lived simply, learned the rudiments, obeyed orders, and studied the Bible.

Some of them came to him in chains; a few committed suicide or tried to; old soldiers laughed at his ideas; but with equal parts of faith, of common sense and of personal sacrifice, Capt. Pratt, in three years, created the basis of a new departure in Indian progress, and now, at Carlisle Pa., leads the movement with the 196 Indian youths above referred to. The Carlisle School was established by an act of Congress, accompanied by an official report from which I extract as follows.

"Industrial education as a means of civilizing and elevating the Savage, has ceased "to be an experiment. The effort in this "direction recently undertaken and now in "successful progress at the Normal and Agricultural Institute at Hampton Va., furnishes "a striking proof of the natural aptitude and "capacity of the rudest savages of the plains "for mechanical, scientific, industrial and "moral education, when removed from parental and tribal surrounding, and influences.

"Upon this subject in his report of November 1, 1878, the Commissioner of Indians "affairs says:

"Experience has shown that Indian children do not differ from white children of "similar status and surroundings, in aptitude "or capacity for acquiring knowledge; and "opposition or indifference to education on "the part of parents decreases yearly: so that "the question of Indian education resolves itself mainly into a question of school facilities."

Sons of Indian chiefs, at Carlisle, are now making a portion of the shoes, harnesses, wagons, tin-ware and other supplies needed by the department of Indian affairs.

Though it is a government scheme, Capt. Pratt is often deeply embarrassed by legislation, and needs, and can use as profitably as any philanthropist in the land, private contributions. The friends of the Indian should help the Carlisle School.

Delegations from the tribes are often sent to both schools resulting in much enlightment and fresh interest in the question of education.

The speech of Chief White Eagle at Hampton, to the three races before him, was the language of a Christian theist. He was a heathen, but gave them as good advice as any doctor of divinity could have done. Little No Heart, a savage, after visiting there, went back to his people and preached to them the gospel of education like an apostle.

Indians think. Their wise ones know that there is no hope for them but in taking the white man's road. But there is also a stubborn unyielding class. There are progressives and conservatives, as among all thinking people.

The braves will not fight the people who are educating their children. Every Indian child at school is a hostage. Had the son of Dull Knife, the Cheyenne chief who, a few years ago, with three hundred warriors, made one of the most brilliant raids of history through Kansas, been at school as he should have been by treaty stipulation, Dull Knife would never have gone on that expedition. So John D. Miles, agent of the Cheyennes, told me.

Frontier ideas result from the objects of frontier life in pursuit of which men are generally unscrupulous. So far as Indian territory is concerned, might makes right; treaties are nowhere.

I recently met an army officer who told me that in the summers of 1877 and 1878, five hundred thousand dollars had passed through his hands, as Quartermaster, in payment of Oregon settlers, for supplies and services in Indian wars; and that the past summer, they had been trying to get up another war, for the sake of another five hundred thousand.

The frontier-man has corn, hay, horses, mules, carts and his own services to sell. In earlier days, fourfifths of all the money sent into parts of our territorial region was for warfare against Indians. Not that all settlers love war, but a class is so disposed, and is active about it.

The outposts of civilization, on this continent, and throughout the Pacific Ocean, are established by the spirit of gain. Anglo-Saxon pioneers have no mercy on the weaker races who are in their way, or whose vices are their profit or pleasure. Our advanced guard carries to them rum, powder and sensuality in one hand, and the Bible in the other. Progress appears to be against them. The locomotive seems to scream the fate of the Indian.

Our system of treaties, annuities and rations is an acknowledged failure. Distribution is without regard to merit, and encourages idleness among the one hundred and fifty thousand beneficiaries of the government. It is better to destroy them than to emasculate them.

The Indian is the greatest of all sufferers from our civil service. The energetic and wholesome policy of Carl Schurz may end in a few months. Thorough going work cannot be done in any four years; a consistent Indian policy is impossible as things are. We may mean well but we deceive them.

When Sitting Bull said to Gen'l Terry's delegation, "Your country lies," there was no answer to make.

A keen unscrupulous civilization and a simple barbarism have met. The barbarism has ceased to be simple, and is becoming about as keen as the enemy, but is no less barbarous.

A captain of the Missionary Packet "Morning Star," who had spent his life among the Pacific islands, told me that he never feared to land among savages if he were only sure that no white man had been there before him.

The Indians are grown up children; we are a thousand years ahead of them in the line of development. Progress is measured by development. Education is not progress but is a means of it. A brain full of book knowledge whose physical basis is the product of centuries of barbarism, is an absurdity that we do not half realize, from our excessive traditional reverence for school and college training. We forget that knowledge is not power unless it is digested and assimilated. Savages have good memories; they acquire but do not comprehend.

Indians are easily taught, for their minds are quick; their bodies are a greater care than their brains; but morals are the chief concern of their teachers. Hence their education should be first for the heart, than for health, and last for the mind, reversing the custom of placing mind before physique and character. This is the Hampton idea of education.

Apply sanctified common sense to the Indian problem and you will save them in spite of the steam engine and the threats of fate.

The Indian question has been put wrong end first. It points to us not to them.

The possibilities of sound educational methods are not dreamed of. The power of mind over matter is every where seen, but the power of mind over mind, of man over man is little shown in all our proud progress. That three years work of Captain Pratt at Fort Marion, Florida, is the best illustration of it I know of. Yet he never had over two years schooling, and went from his workshop to the war. Work for the ex-captives was so encouraging, the need of educated Indian girls so obvious, that resolving to push our effort further, Mr. Schurz was interviewed, entered heartily into the scheme, and sent Capt. Pratt to Dakota Territory, whence he brought to Hampton in Nov. 1878 forty boys and nine girls, since increased to twenty-two girls and forty-eight boys. Indian girls lead a slavish life, do all the drudgery, and parents have hated to spare them. Boys do nothing till they can fight. "I would send a hundred boys, but not one girl," said a chief to Capt. Pratt. But now one agency alone, Yankton, would fill our school with Sioux girls. Agent Miles says he could enroll Cheyenne children from the Indian Territory for eastern schools as fast as he could write their names. The other day he tore a boy by main force from an overflowing party for Carlisle.

Co-education of the sexes will succeed with Indians as well as with colored people in the six largest institutions for negroes in which for ten years it has been tried with the best results.

Neither race respects woman. The Indian sister dares not speak to her brother who lives in the same tent; a girl is nobody. Young men rule in the family and in council.

Hampton gave the Sioux boys their first lesson in civilization when, on landing, they walked three miles to school and the girls rode in wagons.

The Indian child has had no childhood: we must make up for it. Didactic and dogmatic work has little to do with the formation of character, which is our point. That is done by making school a little world in itself: mingling hard days work, in field or shop with social pleasures; making success depend upon behavior rather than on study marks. School life should be like real life.

To supply clothes as fast they are worn out, and to expect boys to be interested in working without pay, is a mistake, so we pay them for their work and make them buy their clothes.

They are paid in cash, and can, if they choose, waste their money on cake and candy but soon they suffer and learn a lesson. Experience is the best teacher.

Of our Dakota boys three have passed through the ordeal of the "Sun Dance," i. e. suspended from a tree, by a rope fastened to a huge wooden needle which passed through the fleshy portion of the breast, swinging in the air while their comrades danced. To cry out was to be a squaw: to bear it without flinching was to be a brave.

From such scenes to willingly have their glory, their hair, cut off by a negro student barber, and to scrub the floors of their rooms on their hands and knees, was a change easily brought about by tact and kind treatment.

Sergeant Bear's Heart and Corporal Yellow Bird of the Normal School battalion, with their chevrons and stripes, suggest order and obedience rather than the savagery we read of.

To go to bed with boots on and leave off half their under-clothing the next morning, were among the trifling peculiarities which had to be watched at first. A drill in bed-making was found quite necessary for the braves, and is thus described in the *"Southern Workman"* by the teacher Mr. Jas. C. Robbins, a colored graduate, who superintended the operation:

"When they first began to make beds, the sheets were either tucked up under the pillow or laid on the outside. One boy was found to have seven sheets, who did not know the proper use for two. The janitor helped me carry a bedstead into the sitting-room, the boys were called in and seated in a semi-circle, and I began the process of bed-making, the boys grunting and laughing as it proceeded. When the clothes were neatly tucked in, and the pillow shaken and put into its place, I said, 'Now boys, I will show you how to get into bed,' which I did. Then, through the interpreter, I asked who was willing to try it. He hardly put the question when a boy who had objected to having his hair cut when he first came, stepped forward. He began where I did, and followed every movement, so closely had he observed. No sooner did he finish than there was a stunning applause. He was then asked to show us how to go to bed, and when his head touched the pillow and he drew the clothing up over him, up went another shout."

A teacher who knows not a word of Indian has before twenty-five of them who know not a word of English. Nouns are taught by articles picked up out of doors and piled on a table, and by pictures; verbs by action, very much as I have seen deaf mutes taught.

A year and a half after the arrival of the Sioux children we began to look for simple story books for them to read. Knowing the reaction sure to follow gratifying a childish desire for school books, we kept them back, to their discontent, gradually allowing their use in class hours thus increasing their eagerness to know more.

Seasible, vigorous stories or any literature in very plain language, is hard to find and is a difficulty in our work for both races, whose vocabulary must always be limited. Twenty-two months from their homes they, as a rule, understand ordinary conversation, though they are both to speak it except to their teachers, and and never show off their English well.

They study or recite, from half-past eight in the morning till twelve. From one till six p. m., they work. In the evening, there are games, conversation classes, and religious meetings. The girls are taught to sew, make and mend their own clothes, most of them now can make their own, take cooking lessons, and do housework, washing and ironing, as well as our best colored girls. They are particular in washing dishes and setting tables, but are rather slow about it.

The boys are taught farming, for which most generous provision, by way of a three hundred and fifty acre farm, has been made by a generous Boston friend.

Two are learning the printer's trade, four the wheelwright and blacksmith's trade. The fifteen in the Indian shop are at carpentery, shoemaking and sheading, and harness repairing. They make all the tables, and tin ware, and do the small jobs in painting and glazing. Indians have a knack in leather work. I can show you a one horse cart and a plain two story house built, by Indian boys.

Like the girls, they are neat and tidy but slow. A boy will make a perfect mortise but is too long about it.

At first, they soon tire, for their muscles are not trained to steady day's work. After a year, they are equal to ten hours labor. But they will not soon get the Anglo Saxon's gift of endurance or continuousness. They measure larger at the hips, and less relatively at the chest, than the whites. All these races seem weak at the lungs, being most sensitive to change of surroundings. Consumption is the great enemy.

The death rate has been serious but not discouraging. Out of ninety-six, in twenty-two months, seven have died at school and three since returning home. The tribe, gathered as they are in unnatural conditions at the agencies, away from the chase and the fight, without action or buffalo beef, fed on government rations, weaken. Indian students have in almost all cases died of diseases implanted before leaving home; their friends have not been surprised or discouraged.

Chief Wizi, on hearing of the death of his adopted son at Hampton, called his tribe together and said: "If only one of our children return to us with knowledge, we shall be repaid for the loss of all the others."

In health, they, as a rule, hold their own. Bringing them east does not increase the death rate.

But why send Indians east to be educated? The sentiment of Indian agents and teachers is that education, not too long sojourn away from their homes is important, that they may break from their old habits, see what civilization is, but return before they shall have ceased to feel for and care for their people. Too much absence is as bad as too little. It is easy to spoil them. Sending an Indian east for a college education is a blunder, unless there is a place for one with such an education.

While this eastern work at Carlisle, and Hampton is incidental to the general educational effort which must be made at the west, it is, more than anything else, pushing the Indian question to a proper settlement by creating public sentiment. For a Congressman to see an Indian hoeing corn, does more good than piles of documentary evidence. The hundreds of clear headed, hard handed young red-skins who will ere long, be settled among the tribes, will, we think, be strong enough to sustain each other and to teach the rest. They will not return home scared by our great guns and arsenals, but stimulated by contact with the spirit that lies at the bottom of our progress. They must see civilization to comprehend it.

Government pays one hundred and fifty dollars a year, for each Indian student at Hampton. The extra cost, after allowing thirty dollars as the average yearly value of each one's work, is about seventy dollars, which is provided by friends.

The Hampton Institute is a private corporation, not a government affair, as many seem to think. It has very little endowment, and is dependent directly upon annual contributions. Special gifts, to the amount of thirteen thousand dollars, have been expended in buildings for Indian boys, and now we need

fifteen thousand more to give the girls a fair chance. They are ready to come; five for every one we can receive.

Mr. Schurz has pledged himself to send fifty if we can take them, appropriating one hundred and fifty dollars a year apiece. The deep degradation of Indian women calls for an earnest effort in their behalf.

Of our seventy Indians, twenty five are from Episcopal agencies, attend the Episcopal service and are visited by the rector, who is invited to assist in their spiritual care.

Six are Catholic and, at the request of the Priest, are allowed to attend Sunday morning service at the National Soldiers Home near by. The rest are from Congregational or Presbyterian agencies. All attend the regular school service, and receive its impressive and moulding influence. The American Missionary Association of New York has assumed the extra expense of the Fort Berthold Indians, as a part of its work for the red race.

The test of returning to their savage home is yet to come. Over forty will go back in November 1881, to settle in six separate groups. I hope to spend part of next summer in Dakota, to arrange some definite position for each one, lest, by being thrown suddenly among their pauper people, they shall be discouraged and swept away by the strong tide of low living.

They must be at once put to work. This is the most critical point in the whole experiment, and there is no real success till it is passed. To provide against it, is part of the complete chance that we owe the Indian. We expect that some will relapse.

I have been surprised at the strength of the filial and parental tie as illustrated by our Indians. The children write home about once a week. The monthly card showing each one's record in study, labor and conduct is eagerly awaited at the agencies. Not a little good is done by this correspondence and the reports. The father of "Roman Nose" was induced by his son's letters to quit the blanket and buy a farm. Parents send many wholesome messages to the children and kind words to their teachers.

A Sioux boy writing home to his people said in his own language: "When I was at home, I was blind, I saw nothing. Now I feel as if I am walking up and mountain and looking off a little further all the time."

After "Bright Eyes'" visit to Hampton one of the older Indian girls said to a teacher, "Miss Bright Eyes, I wish I like that."

The following illustrates the spirit of letters from parents and relations to their children at school:

A full blood Indian chief writes to his half-brother from Crow Creek.

Aug, 25, '79.

I am going to write you a letter. I never forget you. Try to learn all you can while you are down there. I wish I were young so I could go down and learn too. I want you to learn all you can and come back and teach your brothers. Try to learn and talk English too. Don't think about coming home all the time. If you do you can't learn much. I like to have you write a letter back and tell me how you are.

WIZI—That's I."

A FATHER writes from Fort Pierre, Dakota.

"I want you to learn to be a printer. I want you to learn to talk English. I would like to have you learn to be a carpenter. I would like to go down there and see how you are getting along. If I was down there. If I saw all the boys down there, then I would come back and tell the Indians, and they would be all glad. I hope some of the boys will learn how to be a teacher when they come back that they can teach the boys and girls. This is the only chance you have. Get all the good you can. This is all I have to say."

A BROTHER TO HIS SISTER.

"DAKOTA.

"*My Sister:* I want you to learn all you can, and learn something good and God watch you all the time. I want you to learn something. That's the reason I let you go to Hamptoa.

BULL HEAD."

Of the eight Sioux Indians who have since coming to Hampton, been baptized and made profession of their faith in Christ, we may say what the Rev. Mr. Dennison, our pastor, said of the twelve captive warriors from Florida who were received into the Bethesda Church.

"We are not deceived into thinking that these Indians present a highly civilized type of piety, but, after careful observation, we are forced to believe that, as regards the pith and marrow of Christianity, they are our beloved brethren, for this one thing they do if ever men did it, forgetting the things that are behind they press toward the mark. One point in theology they understand and only one. It is to walk the new road in the help of Jesus, and they show their faith by their works. They are patient in study. They are always found on the side of law and order. Digging in the earth is not the chief joy of an Indian warrior, but Koba writes "I pray every day and hoe onions."

Simple and beautiful expression of faith and hope from such people must not be taken as the fruit of a ripe experience, but rather as children talk. A lovely sentiment one day and an unlovely word or act the next. We have no theory of the Indian upon striking quotations or touching incidents, but upon average daily living.

Respectability here is in the air; it is a habit; you inherit it; it is the fashion and it pays. Among savages, degradation is in the air and is the blood; it is customary and comfortable, almost universal, and virtue is a cross instead of a crown. The civilized man is honest not because he is good but because it pays to be honest; but it took ten generations to find it out.

Not till a race comprehends the practical bearing of integrity, will it practice it. Knowing it is not comprehending it.

Of all the factors in the Indian problem, patience is one of the most important; for, while individual progress may be rapid, that of a race is exceedingly slow.

Put yourselves in the place of these young Indians when they shall go to their homes. The grace of God only can save them. Without careful Christian culture our work will come to naught. Upon the moral and the religious life is our most important duty.

In nearly two years experience, we have found no signs of the revengeful nature ascribed to the Indian. "They are like other people" is a common remark among us, and is the sum of Indian character.

Without good voices or harmony, they sing about as much as colored children, being specially fond of Sankey's "Gospel Hymns" and negro "Spirituals." A parlor organ kindly given them was played from morning till night till it was nearly played to pieces.

They have a deeper religious nature, I think than the blacks: less demonstrative, but more thoughtful. The Indian catches a clearer glimpse of God than other savages. Christianity has no ideals to break: it simply lets the light in.

I say this in the face of border atrocities and inconceivable cruelties. Their code is a good deal like the Mosaic; "An eye for an eye."

The twenty-four Indian youth present this evening have spent the past four months working for their board with the plain intelligent farmers of Berkshire Co. Mass.; the best object lesson in Christian civilization we could give them.

These boys and girls have labored side by side with the simple, solid men and women of the land, acquiring language, habits and ideas better in some ways than at school. They are en route to Hampton but were brought here to see, face in their lives, the sights and people of this good city. It is part of their education.

Of their success with their farmers, the following letters will speak.

Monterey, Mass. Sept. 29th, 1880.

Dear Sir:—Your letter by Uhakeumpa came to hand yesterday. And in reply, I must say that I am inclined to think that we have had the bright side of the Indian character to look at, therefore you will please make due allowance in what I may say concerning them. The one I have had I know the most about as he has been one of our family through the summer. I think however, I have had good opportunity to know all the young men who have lived in Monterey this summer as they have spent a part of almost every Sunday afternoon at our home, and have made frequent calls here on other days of the week.

I can truthfully say I have not witnessed, or heard of, their doing an uncivil act, either individually or collectively, and we have learned to repose great confidence in them.

We have been impressed with the regard they have manifested for one another. There seems to be a bond of sympathy among them. They are all active fellows, always ready to help work. Many times when I have been engaged in work that they could do, they have taken off their coats and gone at it without my saying a word. I could cite several instances did space permit.

They cannot endure hard work all day long as well as those who have been brought up to it. They learn to do the different kinds of work on a farm very readily. They love to play at games, croquet, checkers, dominoes and are quite expert. As scholars they have as good capacity for learning as white boys, and appear to improve their opportunities. In fact there appears to be no reason for a teacher to be discouraged with such minds as any of these Indian boys, that I am acquainted with, possess. Some of them which I could name have really fine talent, and if they do not make their work in the world, I shall be disappointed.

The burden on their minds is what they are going to do in the future. By their speeches to each other, that have been heard by my family, they seem fully determined to disappoint those who predict their return to their blankets and wigwams, and make them blush with shame. The idea of good houses, school houses and churches is a favorite one with them.

Now with such minds, such talents, such ideas to start with, I see no reason why with adequate instruction and encouragement, the Indians may not be civilized and christianized. And I am thankful for what the government is doing for the education, and encouragement of the Indian. I shall not soon forget what impressions of joy I had when I first heard the boys singing the Gospel Hymns, it fairly made tears come to my eyes. They love to sing them and that is why they come every Sunday afternoon to our house. O these boys must be held on to, as a loving father would hold on to a son, we must write to them and assure them we do care for their welfare.

All the Indian young men have been in our Sunday school, and have attended quite regularly. At one of our concerts, they each recited their verse bravely.

They always have manifested a reverence for religious worship by bowing the head or the knee.

I do not know as I have written any thing of much consequence, every body knows I am more skilled in guiding the plow than the pen.

Yours truly,

T.

Mr. Bidwell of Monterey Berkshire Co., writes under date of Sept 24 as follows.

"*Dear Sir:*

* * * We are forced to admit that it would be hard to find six white boys who could make so favorable an impression in every particular, under like circumstances. They have as a rule been regular in their attendance at church and Sunday school, and interested, attentive listeners and learners. They have been willing and cheerful in learning and performing the customs and workings of civilization, and have in them won the determination to take back with them when they return to their homes the customs they have learned to respect here. How far they may be able to elevate and civilize others is the problem.

I must say I am more hopeful from the observation of these boys than before, and I can but feel that this is the best way possible, to educate, civilize and christianize the tribes who have a claim upon our sympathy, whom we owe at least fair dealing and treatment."

But it may be asked "Has Hampton abandoned the negro?"

Never has the tide of negro students set in so promptly and so strongly as since Oct. 1st, of this year. For the first time in twelve years, there are very few stragglers, the rooms and benches are crowded from the start. Indians have separate buildings, and do not affect our negro work which steadily increases.

For the second time in the history of the school, tents have been erected on the campus and occupied by our colored boys.

Our three hundred graduates fall short of the demand for public school teachers who, this year, are better and more promptly paid than ever before. Calls are daily coming from school superintendents for teachers, and there are no more to send.

The educational movement is the South is growing; the work is full of inspiration. We are not as those who fire into the air; we see our shot strike. Our graduates are the men for the work.

The cotton that the negro raised, both in slavery, and in freedom, is at the bottom of the nation's wealth and credit. The ideas that negro school-masters shall plant and spread, will lie at the foundation of a new and higher growth for the South and for all.

The idea of the Confederacy was an aristocracy of wealth and knowledge. With the diffusion of knowledge, the war will be over. This work presses upon the thought and resources of every good citizen.

What is given for these races will come back with usury. Not the least return to us may be the educational methods which inspired by exigencies and unchecked by tradition, shall be worked out to meet the emergencies thrust upon the country by the enfranchisement of the negro, and by the destruction of the buffalo, which has brought the Indian to face the issue of civilization or destruction.

The officer or home-father in charge of our Indian boys is a negro whose tact and teaching could not be surpassed.

There is no race-friction. The mingling is good for both, pushing the Indians by the force of surrounding influences quickly and naturally along and reacting finely upon the negro by the appeal to his better nature.

The point of all I have to say is: *Shall Hampton have fifteen thousand dollars for a building for Indian girls?*

SAID a tipsy husband to his wife, "You need-need n't bl-lame me. 'T was woman thut first tempted man to eat forbidden thinge." "Thut won't do," retorted the very indignant wife; "woman may have first tempted man to *eat* forbidden things, but he took to drink on his own account.'

THE HAMPTON STUDENTS' OWN.

We intend to devote several columns hereafter, perhaps a full page, to contributions from both the colored and Indian students of Hampton. All who can, are invited to send in articles and those published will be in all respects original. We believe that they will not only be a good training for the writers but add to the interest and characteristic quality of the paper, as an expression of Southern work and workmen. We begin this month with a column from each of the two races.

AT the last session of the Petersburg Episcopal Convention, a Report of work among the Indians at the Hampton Normal School was presented by the Rev. J. J. Gravatt. The Convention endorsed this work, pledged itself for at least one scholarship of $70, and now requests each church within the bounds to make special contribution toward this object.

This illustrates the interest felt in the State of Virginia, in the work for Indians at the Hampton Institute.

DANGERS OF KEROSENE.

YEAR after year warnings are published in the newspapers against the practice, in which some house-servants and fewer house-wives indulge, of kindling fires with coal oil. Sometimes the warning is a simple account of a fatal accident, sometimes it is in comments thereon. The warnings, however, do not seem to be heeded, and now comes the story of a woman who used blasting powder with which to kindle a fire, and caused an explosion fatally injuring herself and two children. The use of powder for kindling fires was not unusual in the army during the war, but the fires were in the open air, and the powder was used by men familiar with its properties. They were, indeed, so well acquainted with the danger attending its use, that they never tried the experiment until all other means had failed to quicken a fire, and then with extreme caution. It is scarcely necessary to say that all explosive compounds, and all burning fluids should be kept away from the stove, and that under no circumstances should an attempt be made to add powder or oil to a fire. It is bad enough to saturate wood with oil before lighting it, which is a practice very apt to lead to carelessness and danger, but the attempted pouring of oil on a flame is an act of suicide.

PLAINVILLE, CONN., *Sep.* 7, 1880.

Sir.

Enclosed I send a dollar for your paper the Southern Workman, another year.

A large amount of good sense, cheap enough.

Yours respectfully,

T. H. DARROW.

THIS PAPER may be found on file at Geo. P. Rowell & Co's Newspaper Advertising Bureau (10 Spruce St.), where advertising contracts may be made for it **IN NEW YORK.**

$10 Outfit furnished free, with full instructions for conducting the most profitable business that anyone can engage in. The business is so easy to learn, and our instructions are so simple and plain, that any one can make great profits from the very start. No one can fail who is willing to work. Women are as successful as men. Boys and girls can earn large sums. Many have made at the business over one hundred dollars in a single week. Nothing like it ever known before. All who engage are surprised at the ease and rapidity with which they are able to make money. You can engage in this business during your spare time at great profit. You do not have to invest capital in it. We take all the risk. Those who need steady money, should write to us at once. All furnished free. Address TRUE & Co., Augusta, Maine.

Horsford's Acid Phosphate produces most excellent results in the prostration and nervous derangement consequent upon sunstroke.

HORSFORD'S ACID PHOSPHATE
Makes a Delicious Drink.

DR. H. HENRY, the widely known and eminent family physician of New York, says:

"Horsford's Acid Phosphate possesses claims as a beverage, beyond anything I know of in the form of medicine, and in nervous diseases I know of no preparation to equal it."

Horsford's Acid Phosphate restores enfeebled digestion, imparting vitality and correcting the feeling of lassitude so common in midsummer.

Horsford's Bread Preparation makes Biscuit, Rolls, Cake, etc., that are more wholesome, nutritious and digestible than when made in any other way.

THE GROWTH OF IDEAS AMONG THE NEGROES AND INDIANS.

REV. ADDISON P. FOSTER, JERSEY CITY, N. J.

It is a truism to say that the welfare of our country depends on the ideas which are provided well illustrates it. The same spirit appears in the support of the "Butler School," situated on the grounds of the Institute, and taught by its graduates. The State of Virginia furnishes funds to keep this school open only five months; but the parents of the children, finding employment in a canning establ-

THE LYNCHBURG NORMAL INSTITUTE.

The meeting of the first Normal Institute of colored people in this State, (I believe in this country) was arranged by Dr. Ruffner, State Superintendent of Public Schools, and Gen. Eaton, U. S. Commissioner of education, the necessary means being provided from the Peabody fund. The Institute was held in the Court House, and was opened on the morning of Aug. 2nd, by Dr. Ruffner, who introduced Gen. Eaton, who addressed the audience on the importance of the work of education, and the duty of the colored people to improve their opportunities. Prof. Hoge, of Hampden Sidney College, followed in an address on the duty of the colored people to the white people. Prof. Southall, of the Virginia Female Institute, spoke on the duty of the white people to the colored people. Prof. Smith, of the Virginia Normal School, spoke on the duty of the colored people to themselves

THE GROWTH OF IDEAS AMONG THE NEGROES AND INDIANS.

REV. ADDISON P. FOSTER, JERSEY CITY, N. J.

It is a truism to say that the welfare of our country depends on the ideas which are prevalent. No inquiry, then, can be more helpful in determining our condition as a nation then that which reletes to the progress of ideas among those classes which give us most anxiety. The Freedmen and the Indians are not the worst classes among us, but they have been the most ignorant, and every petriot is desirous of knowing their present mental condition. A recent visit to the Normal Institute at Hampton, Va., on the occasion of its graduating exercises, gave your correspondent, as he listened to the addresses of the students and conversed with different colored people, an opportunity to collect facts which, though not decisive, are at leest suggestive on this point. Undoubtedly, these ideas came largely through the influence of Hampton Institute; but it must he remembered that similar institutions nf the American Missionery Association and other boards are scattered throughout the South, and that, through their educated students, these ideas are diffused for end wide among the colored people.

As to *work*, the colored man long since learned the Divine law, that if he would not work, neither should he eet. One could not sit for an hour on the wherf at Norfolk, as we did letely, and watch the colored men shout the sloops and lighters and on the docks, without being impressed by the fact that they had learned to work.

The same lesson is just now being diligently conned by the Indiane. Carl Schurz, in hie speech at Hampton, declared that the Indiene were discoverirg that they must work or starve, that hunting would on longer support them, and that the land must he cultivated for food. A similar truth was uttered hy "Bear's Heart," an Indien youth, who made an interesting address in broken English on the same occasion. Said he: "Before I come here, I play; my mother and sisters work. When I go back, my mother and sisters do housework; I dig the ground"—a purpose which was loudly applauded. An emusing story is told of a certaiu great Generel who ie supposed to sympathize with the harharous sentiment, "The only good Indien is a deed Indian." Driving out from Fortress Monroe to examine the progress of the Indians at Hempton, he was investghing against them, and declaring vehemently that they could not be teught to work, when he cast his eyes on a field belonging to the Institution, and there were ten Indian boys vigorously hoeing corn.

As to *property*, the desire ie coming to be very strong among both Indian and colored for the possession of land. It is well known that many Indians on Western reservations are seeking an ownersbip of land in severalty. A eimilar desire has long stimulated the colored man. Wo had the honor of talking with a man of unmixed negro bhood, who owns in fee simple, about twenty miles from Norfolk, a good farm of 171 acres. He and a friend purchased together an estate of 342 acres of woodland, paying $1,300 for it. He took one-half, paid in cash $200, which he had saved up during the war, and the remainder in three years. He has since fairly stocked his farm, built him a little house, comfortably fed his family off his farm, and secured about a hundred dollars a year in cash. When we met him, he was on the way to Hampton to see his son graduate with valedictory honors. Geo. Sykes, of Lake Drummond, Va., ie a man whose name deserves to go on record. Mr. Sykes affirms that eight years ago he was the first colored man in his township who owned land. Now twenty-five own from five to thirty acres each, and have their deeds without encumbrance, while twenty-five others have bought land and are paying for it.

As to *self-help*, we heard the most encouraging words from speakers on graduation day. "We must stand on our own feet," said one speaker, "and must not trust alone to missionary societies or State or individual aid." "No talk," he added, "will make me equal to other men, but I must equal them, if at all, hy my own exertions." A striking instance of self-help is more conclusive testimony. We conversed with a certain young Hampton graduate who gave us a remarkable history. He was an orphan. After eaving up $125 by farm work, he went to Hampton for study, receiving no aid, and working summers. At the end of two years, he found he had not more than forty dollars left, so he went to teaching. But he was paid only in orders on the State Treasury, which he could not get cashed except at a discount of generally twenty per cent. With business wisdom, he secured a living by farm-work in summer, saved up his orders on the Treasury, till at the end of three years the State cashed them in full, and then he went back and graduated. Not even Dr. Goodell, of missionary fame, carrying his trunk on his back to Andover for the saka of an education, showed more heroism than this colored boy.

The colored people'e desirs for *education* has long been known, and the incidant just related well illustrates it. The same spirit appears in the support of the "Butler School," situated on the grounds of the Institute, and taught by its graduates. The State of Virginia furnishes funds to keep this school open only five months; but the parents of the children, finding employment in a canning establishment on the Institution's property, gladly pay ten cents a week for each child from their slender wages, and so keep the school open the rest of the year.

As to *responsibilities*, the colored students recognize their duties as leaders of their people. Some of them who would gladly be teschers have found that orders on the State Treasury, subject to ten or twenty per cent. discount for cash, are not very remunerative, and are looking in other directions for employment. Undoubtedly, as skillful farmers and successful merchants, no less than as teachers, they can elevate their people. But at Hampton, a stalwart black man, in a post-graduate address, gave the students a ringing exhortation not to desert, because of its hardships, the vocation of a teacher, "which," said he, turning to President Hayes, who sat before him, "is a nobler position than even that of President of the United States." The responsibilities of the negro for village improvements in the South and for the evangelization of Africa were points dwelt upon by other speakers.

We listened with peculiar interest to references made in the graduating addresses to the relation of the colored man *to other races*. It was pleasing to see the kind and forgiving spirit manifested. No bitterness was shown either publicly or privately because colored teachers had failed to secure their pay. An interesting essay on "The Advantage of Disadvantages" referred to their ill-treatment in the past, with no word of reproach. One speaker advanced the sentiment that the colored man need not feel especially troubled at his past deprivation of political privileges; that it was better for him not to have much influence in government until he had become fitted to exercise that influence wisely. Other like utterances were made, full of patience, modesty, loyalty, hopefulness and a worthy ambition.

As to *religion*, everything is most encouraging. We attended a revival meeting in a neighboring church, which was conducted with great decorum and genuine feeling, entirely different from the wild harly-barly of war times. The students of the Institute are carefully trained in religious truths, and it is seldom that a graduate goes out who is not a sincere Christian. The spirit of the anniversary exercises was that of a deep, but unostentatious piety. The same influence is exerted among the Indians. We were told a touching story of "Walking cloud," an Indian boy whom nothing could move from his stobility and his unwillingness to put away the badges of his barbarism—his blanket and long hair—till the chaplain of the Institution showed him a picture of Christ on the cross and explained its meaniug. This boy, soon afterward taken sick and dying, gave expression in the peculiar metaphoric speech of his race to his desire to live a Christian life.

We are abundantly satisfied that these noble institutions through the South, of which Hampton is one of the best-known and most efficient, are surely, and not so very slowly, re-shaping the races which are under their influence. We think there was abundant reason for Governor Long, of Massachusetts, in his address at Hampton, to use these words: "Horace Greeley was wont to say that the way to resume is to resume, and so we would say, the way to solve the race problem in this country is to solve it; and this is what the Hampton Institute is doing." —*American Missionary.*

THE bill pending at the last session of Congress to establish a national educationel fund was reported by the committee on educatiou and labor. It provided that the net proceeds of the sale of public lands and the net proceeds of potents shall be forever consecrated and set apart for the education of the people, for the first ten years to be apportioned according to the illiteracy of the population of the several States and Territories. The proceeds were to be invested in United States bonds, the interest only to be paid to the States. The addition of the net proceeds from the patent office was made, because the amount realized from the sale of public lands has been reduced in recent years to a small figure.

THE American Missionary Association, which has now completed eighteen years of work in the South, has during that time expended $4,800,000, $3,000,000, of which were employed in the education of the colored race. During the same period, it sent to the South some five thousand three hundred missionaries and teachers. It has nineteen educational institutions in its jurisdiction, and sixty-five churches have grown up under its auspices. About fifteen thousand pupils were taught by graduates of its institutions during the past year.

THE LYNCHBURG NORMAL INSTITUTE.

The meeting of the first Normal Institute of colored people in this State, (I believe in this country) was arranged by Dr. Raffner, State Superintendent of Public Schools, and Gen. Eaton, U. S. Commissioner of education; the necessary means being provided from the Peabody fund.

The six weeks' session was opened on the 15th of July in the African Methodist Church; the address of welcome, an able and eloquent effort, being made by Major Kirkpatrick, a prominent lawyer and politician of this district, who, from his early life, has been noted for his kindly interest in the colored people, and disinterested zeal for their religious welfare.

The institute excited much interest in the community at large, the meetings being attended by numbers of citizens of both races, especially by members of the press, teachers of the public schools, and all interested in education. A number of entertaining lectures were given by various persons of note connected with the Institute; a very instructive one, of which I hope at some future time to give the readers of the WORKMAN an abstract, by Gen. Eaton; several, which were deemed of special interest, by Dr. Mayo of Boston; a very learned and able discourse by Mr. C. M. Blackford, one of our leading lawyers, on the "Power of Christianity;" one by Prof. Wyatt of the city high-school explaining the use of a "School Register," invented by himself and deemed of great value by those who have used it; and others by various friends of the colored people. Of Dr. Raffner's lecture, one of the daily papers remarked "The Doctor gave a very interesting historical sketch of the Negro race, from the earliest times to the present day, showing the various stages through which they have passed and the part they have played in the history of mankind. The causes of their decline from the state in which Homer and Herodotus saw them were briefly set forth, and the means of regenerating and elevating them were discussed with great ability by the eminent speaker. Dr. Raffner's address was pronounced a most excellent one by all who heard it, and the hearty applause it elicited from the colored people showed that his kindly words of sympathy and encouragement had struck a responsive chord in their hearts."

Besides their regular instractions to the Institute, Mr. H. P. Montgomery, principal of the school, and his brother, Prof. W. S. Montgomery, both delivered lectures in the colored churches of the city, to large audiences, including members of the Institute. The Principal spoke in regard to the general welfare of his people. I enclose a notice of his address taken from the Lynchburg *Virginian*.

Prof. Montgomery's subject was "Moral Training" and I subjoin the comments of the city papers on it.

"PROFESSOR W. S. MONTGOMERY, delivered a lecture last night in the Court street Baptist church, upon the subject of Moral Training. The lecture was well conceived and well delivered, and reflects great credit upon the Professor who is in all respects a cultured gentleman.

"A large audience was in attendance, who seemed much impressed by the wise advice which the speaker gave. When education and culture shall give to the colored people more such leaders as Messrs. Montgomery, we may look for the rapid development and elevation of the race."

"WISE WORDS FROM A COLORED MAN.—Professor H. P. Montgomery, principal of the Lynchburg Normal Institute, delivered a lecture, Wednesday night, at the Jackson Street M. E. Church, which we wish every member of his race in the South could have heard. Of the many eminently sensible utterances with which his lecture abounded we have space only for the following:

"'Many of you, I understand,' said the speaker, 'have been clamoring for social equality. I am glad for the sake of the race, that you have not got it. The colored race, in the very nature of things, cannot be equal to the white race. It has only been fifteen years since we have emerged from the depths of ignorance and superstition, with many of the vices, the ontgrowth of slavery, clinging to us; and were we to be placed by the whites upon the same social plane, it would take from us the great stimulant which we now have to develop our intellectual and moral natures. 'It is better to be than to seem to be,' and to be made the social equals of the white race would be to elevate our vices, and not ourselves. Let us strive to educate ourselves intellectually and morally, to the highest possible point, and we will find it unnecessary to claim equality. The world is just, and will place us in that position which we deserve to fill.'"

Professor Montgomery also urged the importance of thrift. Speaking of the numerous excursions which have been gotten up by the colored people, he said: "If a church gets in debt it hires a railroad train, the members of the church and its friends buy tickets to the amount say of $500, four hundred dollars of this amount is paid to the railroad company, the remainder the church receives, and the trustees congratulate themselves upon their financial ability. They have raised the hundred dollars, it is true, but at what fearful cost; they have raised $100, but they have paid 400 to raise it, thus making the rich, richer, and the poor, poorer."

As will be seen from the above, the lecturer was eminently practical. His illustrations were exceedingly apt and kept the audience interested and entertained to its close. Professor M. it is evident is in full sympathy with his race. But he is a wise man; he knows the real needs, and in doing his utmost to make his people know them and be deserves and receives the confidence of every true philauthopist."

The Institute was under the management of Mr. H. P. Montgomery, principal of the colored grammar school in Washington, assisted by his wife Mrs. E. F. Montgomery, who was a teacher before her marriage, and still gives instruction in special branches in her husband's school, and his brother Prof. W. S. Montgomery of Alcorn University, Miss. Mr. Montgomery and his aids were chosen under the recommendation of Gen. Eaton, and the selection proved every way fortunate; the intelligent Messrs. Montgomery, with the amiable wife of the elder having won golden opinions during their sojourn among us. The Lynchburg papers alluded repeatedly to the Principal and his brother as "cultivated gentlemen," a tribute to which all who made their acquaintance considered them justly entitled. I called on Mrs. Montgomery at her lodgings and met her frequently at the Institute, and found her an interesting lady, kind, sensible and good, and deeply interested in the advancement of the African race, with which she identifies herself, although there is very little in her appearance to indicate her connection with it. I asked many questions of their history and experience, and Mrs. Montgomery, who is a native of Washington city, gave me a very entertaining account of her life there, and also of her experience as a teacher in Charleston S. C. at the close of the war. The Messrs. Montgomery were both taken to New England from Louisiana in their infancy and adopted into worthy families, to whose careful training they do full credit. The elder brother graduated at a Normal School in Vermont, afterwards taught one of the district schools of that State, and the younger graduated at Dartmouth College, which has sent out Webster, Choate, Story and other famous men. He is an accomplished and interesting gentlemen.

The Musical department of the Institute was in charge of Prof. Grant of Washington, who made a very agreeable impression as an able and amiable instructor, and became very popular during his stay in the city.

The members of the Institute were received with the utmost kindness and hospitality into the colored families of the town, some of them, who had friends here, being entertained as guests, and the strangers being taken to board at a price barely covering expenses, indeed not going so in cases when help had to be employed, and it is greatly to the credit of our colored citizens, that people, very few of whom are possessed of sufficient means to release them from the cares of daily toil, should have been willing to undertake such an additional burden at the hottest season of the year, for the general welfare of their race, without the hope of individual profit. The teachers expressed themselves as delighted with the manner of their entertainment, and surprised at the ease and abundance of their lodging-houses. I called at several of the houses where the teachers were staying, and was cordially invited by the family into a parlor furnished always with comfort, and sometimes with taste and elegance, and was in every case assured by the landlady that they did not regard the trouble and expense, they were undertaking, so much were they concerned in the success of the enterprise.

The Institute consisted of about two hundred and twenty members, presenting great contrasts in appearance and worldly condition. They were of every shade from pure white to jet black; some handsome, refined and intelligent looking, evidently the "upper crust" of a society which is fast dividing into classes, as with other races accustomed to comfortable if not luxurious living, while others were of the plain, scantily hard-working class belonging to the type which the slave-holder called "corn-field hands."

There were one or two grey-beaded men, and one or two boys and girls so youthful in appearance that one could hardly suppose them invested with the dignity requisite for the pedagogue.

The Hampton students did themselves and their school great credit, and were pronounced by far the best material of the Institute, though there were very good specimens from the Richmond Institute, Howard University, and a few from the public schools of the State. Thoroughness and clearness were the distinguishing points of those who had the advantage of Hampton teaching, and it was easy to see that the Hampton pupils meant to make their mark in their generation.

The plan of the Institute was to give five days of the week to study of the usual English branches, calisthenics, music, drawing, etc.; the English studies being conducted by a

...than ours." | ...by Miss Rose D. Klackle's fine musical powers. | ...ent of priestcraft: and it requires little fore-

member of the Institute, under the supervision of Mr. or Mrs. Montgomery, and the exercises being agreeably varied by singing, directed by Prof. Grant, frequently assisted by Miss Rosa Kinckle of this city. The Saturday was devoted to the discussion of subjects designated by the Principal some days before, with the names of those who would read essays. Lectures from visitors usually followed the debates.

The first of these discussions which I had the pleasure of hearing was on the question, "What is the best method of developing original investigation with children?" The female teachers having been appointed to debate it. As I entered the Hall Miss Alice Kinckle a graduate of Howard University and teacher in one of the Lynchburg schools, took her stand on the platform, and in a graceful and interesting manner read an essay, which would have been creditable in any young lady any where. Her reading was followed by sensible and well written lectures from Misses Reddick and Perry, both Hampton graduates, and after they had concluded Miss Fisher, a remarkably handsome quadroon from Washington city, delivered a bright little address. Several others followed, the essays being limited to five minutes each, and were all pointed, sensible and entertaining—delivered in excellent style.

After the speakers selected for the occasion had ended their remarks, Mr. Moutgomery requested any of the male teachers who had any thing to say on the subject to address the Institute. Several young men responded to this appeal, though their speeches not being prepared for the occasion made a less favorable impression than those of the young ladies. I must except from this statement and address made by Mr. G. E. Stephens, a Hampton graduate, now teaching in Winchester, Va. Mr. Stephens is a thick set, fine looking young black man, with beautiful teeth, a very agreeable voice and excellent delivery—decidedly what would have been called in ante-bellum days a "likely fellow." Mr. Stephens dressed and talked like a gentleman, and I heard no speaker with more pleasure during the sessions of the Institute than this veritable son of Ham, who, on more than one occasion, without special preparation spoke in fluent and forcible language on various subjects in a manner which gave promise of great usefulness in life, and told of a fine mind well trained in practical knowledge. After briefly noticing the best methods of developing originality with children Mr. Stephens diverged from the track of the speakers who had proceeded him and dwelt with much earnestness on the great value of originality in mind and character in its influence in life, citing as illustrative examples Christopher Columbus, Martin Luther, and Sir Isaac Newton.

Another of the Saturday debates was in regard to securing the co-operation of parents with teachers; the male teachers being selected to discuss it. The first speaker was an elderly, plain looking black man, dressed in homespun, whose chances for education had evidently not been of the best. He made a very sensible speech, marred by an occasional inaccuracy in grammar or pronunciation, dwelling on various points of school management, and especially condemning partiality, which he called "posheality," reiterating the word sundry times, and being each time greeted with a burst of derisive laughter from his better taught co-workers. As he brought out "posshenlity" again and again with much emphasis, and the relentless mirth continued, he looked around him apparently at a loss to know whether he had made a good point or his companions had a joke on him, and at last took his seat evidently dubious still at tha impression he had made. He was followed by a teacher who made some forcible remarks in regard to the teachers visiting the parents of all the children alike—"not only those who entertained him handsomely, gave him fine dinners and offered him sofas and cushioned chairs to sit on, but also those who had only stools and benches for seats and only coarse fare to ent." After this arose a long-winded, sentimental youth, who dwelt at great length on the importance of securing the influence of the mothers. The speaker grew verbose, and those who believe that Negroes have no humor, might have had their theories shaken, when this orator having taken his seat, after bestowing a lack a daisical smile about him, a tall young black a moor seemed to dart into the air, as he asked abruptly, "Could not the gentlamn have condensed all his remarks into that wise old saying, 'Look after hen and the chickens will look after themselves?'" dropping instantly out of sight, to be promptly followed by another dusky brother who said in a mock sentimental tone "Parhaps the gentlemnn had meant to allude to that tendar poem, 'Let me kiss him for his mother,'" likewise disappearing hastily amidst uproarious laughter. When Mr. Montgomery's inexorable gavel had restored order, Mr. Stephens made some impressive remarks on the power of the teachers of the colored people to influence their race. There was something irresistably pathetic in the young man's voice as he spoke of the great need of moral agencies among his people; "There is in this land a more favored race than ours," said he, earnestly, "a race which for many generations has felt all the best influences of freedom, religion, and educatiou, while tha mass of our people are still benighted in ignorance and degradation;" then followed a flight of knowledge had been given to carry that light to others. It was truly gratifying to those who hope for tha welfara of the Negro-American in our country to hear such noble santiments so well expressed by a full blood Negro. Prof. W. S. Moutgomery was next called upon for an address but declined in gentle, graceful terms, saying he could add nothing to what had already been said by members of the Institute—that it was evident they understood the influence which should extend from the school-room to the hearthstone and he hoped they would live up to their convictions.

Mr. Stephens furnished notes of the meetings for one of the daily papers and the editor thanked him in very complimentary terms for so doing. I enclose account of the exercises of the last two or three day which I did not hava the plessureof ntteuding.

CLOSING EXERCISES OF THE NORMAL INSTITUTE.

LYNCHBURG, Aug. 26th, 1880.

To the Editor of the Virginian :

Sir: Please allow me space in your paper to describe the exercises of the last two days of the Institute. The session yesterday was spent in a geueral way. The school listened to an interesting essay from on of its members, and a very practical speech upon the subject of teaching by Mr. J. E. Yoder, of the city public schools. Much of the time during the morning session was spent in the rendition of music under the direction of Prof Grant, who has taught so successfully that very difficult branch. At 4 o'clock the teachers assembled to listen to Professor M. A. Newell, principal of the Maryland State Normal School. He spoke upon the organization of country schools, and enforced the importance of grading them. He pointed out very clearly the difficulties attendant upon a too frequent change of teachers. He illustrated the objection thereto by describing the effect which a change of workmeo would have upon the foundation of a building, in continuing to take up and put down the same.

This morning the school opened with its regular exercises. Mr. Hawkins delivered an interesting address to the teachers. He set forth with considerable power the great worth of truth, justice, patience, and other virtues so necessary for every successful teacher. Prof Newell continued his directions relative to the grading of country schools. He heard and answered objections to his views quite satisfactorily. He then epoke more directly upon the subject of education, netting forth what real education is. He eummed up his remarks with this definition of it: "That which causes the mind or haud to be actively employed in useful work."

Prof. Newell offered resolutions of respect to the memory of Dr. Barnes Sears for his great public services as manager of the Peabody fund. They were adopted by a rising vote.

Prof. McKeen, whose interest in the Institute has not paled since its incipiency, made a short but highly complimentary speech to instructors and teachers. He paid the instructors a fine compliment and predicted great good from the gathering of teachers.

Major Kirkpatrick, of this city, who delivered the welcome address to the teachers, was introduced by the principal to deliver the parting address. He esteemed it a high privilege to welcome us, and equally as high to utter the parting address. He based his remarks upon truth, honesty and chastity as cardinal virtues; and industry, economy and politeness as minor virtues. He reasoned logically and forcibly upon these as being the great foundation upon which he urged us to lay at the very bottom of our work if we wished the superstructure to stand. He urged all to become Christians and hoped to meet all at last in the better world.

Hon. C. T. Smith, State Senator from Nelson, was present by invitation from Mr. Glass, Superintendant of City Schools, and made a very interesting and happy address. He was frequently applauded during its dalivery and received a vote of thanks at its close.

The Principal delivered a short parting speech expressing his deep interest in each one who had attended the school. The committee reported the resolutions of thanks to all concerned in making the school a success, which were unanimously received.

The following resolutions were afterwards offered by Mr. Hayes, of Richmond, and seconded by Mr. Norvell, of that city: Recognizing the valuable services rendered by our able instructors, their earnest efforts to benefit and train the teachers in the most approved methods of education; their sincerity in discharging this all-responsible undertaking; the efficiency evinced by them in imparting useful and practical instruction, so that the teachers can return to their homes better prepared to educate the youog mind; Therefore.

Be it Resolved, 1st, That we tender to our instructors our deepest and unfelgned thanks.

2d, That we pray Divine Providence will permit them to see some of the fruits of their labors.

3rd, That they may he favored with a safe return to their homes and friends.

They were accepted by a rising vote. The audience was highly entertained several times by Miss Rosa D. Kinckle's fine musical powers. The pleasant six weeks' session now closed by all singing, after the lead of Prof. Grant, "Blest be tha tie that binds us," &c.

One of tha teachers who impressed me as especially promising was a tall young black man from Henry county, of very quiet, modest mnnners, who carefully kept tha minutes of the meeting during the whola term. I found from conversation with him that his only chances for learning were in attending the Danville public schools for fifteen months, that ha is now teaching in his own county, has 120 pupils on his list; until recently has had a wretched building, hardly fit for a stable, for his school-room, but has lately been given a better house.

One afternoon I went to tha Institute while the school was engaged in reading one of those tough pieces in the sixth rendar, the teacher for the day being Mr. Norvell of Richmond, directed by Mr. H. P. Montgomery. The lesson was on the Pilgrim Fathers, and the questions that followed the reading elicited tha surprising fact that some of the teachers otherwise apparently intelligent and well informed had never heard of the Pilgrim's aforesaid, and were quite ignorant of the esuses that led to their landing on "the stern and rock-bound coast" of New England and indeed of anything connected with that enterprising portion of tha Union. That a teacher in a public school should be thus uninformed of what every American child is supposed to know seemed very singular, and I was at a loss to understand it until I saw a program of studies recommended to teachers of country schools exteuding through nina terms, in which no historical work was included, except a history of Virginia for the ninth term.

Thus a pupil whose chances for education are limited to the district schools of the State would remain forever ignorant of the history of any part of our country except that of his own State. Such facts are a strong argument for a national system of education which shall cultivate in the minds of all American children knowledge and love of our whole country.

At ona of my visits to the Institute I found I had mistaken the hour, and only one or two persons were in the Hall, among them Prof. W. S. Montgomery, who was drawing diagrams on the blackboard to illustrate his next lesson. I sat some time talking with the Professor, who gave me an entertaining account of affairs in Mississippi. He says the Negroes are hulldozed entirely out of voting; that it is quite useless for them to attempt such a thing unless they desira to vote tha Democratic ticket, which they are graciously allowed to do. He does not seem to regret this state of affairs much as he deems the majority of the Africans much too ignorant to vote, and says the government should have provided education first and suffrage afterwards. He says the schools thay have now, are hardly worthy of the name; that Northern people cannot conceive the ignorance, degradation and excessive poverty of most of the Negroes. He thinks however that the worst is over, the schools, poor as they are, begin to have soma influence, soma of the Negroes are beginning to own a little property, and there are many signs of progress with both races. He knows Mr. Montgomery of Mississippi, a jet black Negro, who owns Jefferson Davis's plantation, and is now a wealthy and prosperous man, having little general eduentinn, but with abundance of common sense and very good business knowledge. He employs many hands, all Negroes, and manages them better than anybody in the district. Ha has a handsoma residenca and fina library, which his sister, a highly educated woman, takes charge of, with liberty to enlarge it at discretion.

In talking with Mr. Montgomery of the interests of his race, ha said regretfnlly, that ona of the great troubles of the colored people in this generation are their ignorant preachers, men, often with natural gifts as leaders, who had come to the front at the emnncipation and having assumed leadership among their people, were now loth to withdraw. Much of the misery of them their day is over and their usefulness is ended. I found this feeling prevalent among the teachers, who often find their efforts crnmped by the opposition of the preachers to all progressive ideas. One of the young teachers from Albemarle said he had met with much difficulty in this way when trying to introduce Calisthenic exercises into his school. The pastor of a neighboring church had visited the school house and observed the teacher's method with sullen disapproval, and the following Sunday gave notice from his pulpit that all who permitted their children to "practice them tricks" should be promptly expelled from the church. Expulsion from the church has had its terrors for the Negroes hitherto and has not been without its wholesome influence in the past, just as papal excommunication was once a vast power in Christendom, but his African Reverence is destined ere long to find, as the false prophets of other races, who have abused their sacred office, have done before them, that the human mind enlightened by knowledge, throws off the shackles of superstition and grows independent of priestcraft: and it requires little foresight to predict a great change among the Negroes in church matters as the educated element gains and realizes strength among them.

I asked Mr. Montgomery if he had found decided difference in the treatment of colored men North and South, and he said that for himself, he had suffered nothing from color prejudice in the North, still he thought, all things considered, the Negroes' best chances were in the South; what he deamed hard in the South was that the Southern white man made no distinction of class among the Negroes, but treated the educated man, with refined manners, no better than he did the uneouth and ignorant of his race—excluding him from the church, the public assembly—and the traveling conveyance.

The Institute was closed as it was opened by Major Kirkpatrick.

Upon the whole the meeting was full of encouragement for those who look for progress among our colored citizens. Intelligence, cultivation, and a bright spirit of cheerful industry were shown by many of the teachers, all of whom will I am sura derive lasting benefit from attending the Lynchburg Normal Institute.

ORRA LANGHORNE.

We add to the above interesting report, the following extracts from an article written for a Boston paper by Dr. Muyo, whose lecture at the Lynchburg Institute was highly appreciated by his audience.

The past ten years have witnessed a quiet revolution in Virginia, which is rapidly changing it from the Old to the New Dominion. The cause of the people's common schools has been fought out in every community. While we at the North have been looking at the old State through the lurid lens of the political telescope, its public school men, with hardly a word of recognition from the Northern peers, have done a work which, when fully understood, will entitle them to the gratitude of the American people. At the head of this noble holy of men and women is Dr. W. H. Ruffner, State Superintendent of Instruction, who more than any other man in the South stands in the place of Horace Mann in the education of the North. We have no space for the interesting details of this silent revolution. Enough to say that, to-day, the city of Richmond appropriates sixty thousand dollars yearly, and educates more than five thousand children in her good public schools, and is working in this line with a vigor and intelligence worthy of all admiration. The cities of Petersburg, Lynchburg, Norfolk, Staunton, —indeed, all the leading towns of the State, —are following the lead of Richmond. The isolated population of large country districts is a serious drawback to effective school-keeping; yet the efforts of teachers and people, under very embarrassing circumstances, to reach the children, would shame the apathy of many an old township in the heart of New England. A system of Teachers' County Institutes now covers the State; and it is one advantage of a new departure that the best methods of instruction can be at once introduced into all the schools. Amid all the political and financial exasperations of the last ten years, the common school in Virginia has steadily made its way, till no politician or party dares get across its track; and a good deal in the recent revolution in State politics turns upon tha invincible determination of three fourths of its people to educate their children in the light of modern times.

I have just come from a visit of two weeks to the University of Virginia and the city of Lynchburg, upon tha invitation of Dr. Ruffner, to assist in the first State Institute of white and colored teachers. By the aid of the Penhody Fund, the doctor has been able to summon five hundred white teachers to the university for a six weeks' summar school of instruction.

At Lynchburg, we found two hundred and fifty colored teachers at tha same work. They were a remarkable body of young people, largely composed of intelligent young men, working with a vigor and devotion of which any race might be proud. Their summar school is also the chief topic of interest for the best people in that thriving city. Its exercises are attended by many of the foremost citizens; and the writer of this article, at the close of his lectures before it, was invited to address the people on the general subject of popular education.

The common school is to-day, the most vital end of Southern life, especially in Virginia and Georgia, and is rapidly coming to the front in every Southern State. The President of the United States, in his late speech at Columbus, struck the key-note of American statesmanship in his words concerning education in the South. There are many ways in which the State of Hancock and Adams can give aid and comfort to the State of Jefferson and Washington in this great enterprise. The field is white for harvest. Let us not be found on the wrong side of the fence, looking on, but going not to the work.

[From Our Dumb Animals.]

THE OLD COLONEL.

That is what *they* called him, and he went by that name in the neighborhood. He was an old horse. My first knowladga of the Old Colonel was in tha fall, two or three years ago. I had been spending the summer among tha Green Mountains of Vermont, and had received--being an invalid--so much benefit from the fresh mountain air and the purespring water, for which that State is so justly celebrated, that I had lengthened my visit into autumn, and had concluded to try some part of the winter there too, away from the piercing east winds of Boston.

The Old Colonel had been, as I had learned, in his young days, a good-looking, high-spirited horse, and had tha credit of being a remarkably intelligent animal. There were still traces of these characteristics in him. Tha man who owned him was the father of a large family of boys, and they delighted to tell of the "fine points" in the old horse, and the great feats he had performed in his younger days. Each of the boys as they grew up had, from time to time, a hand in driving him. At the time I first noticed the Old Colonel, two or three of the boys were at home, and would exhibit his speed on the roads, although his appearance indicated poor feed and failing strength; but tha whip was applied to take the place of food and develop the speed and strength of the poor creature.

When used as a draught horse, I often noticed tha overloads which they put on him, and the cruel manner in which they beat him to force him to move the load; but not always was I a silent spectator. For expostulations I received what might have been expected from such a source. Curses and cruelty often run together.

I noticed, as tima passed on, that tha Old Colonel grew thinner and thinner, and could scarcely get about. When not at work, he was turned out to stray in the highway to pick up his living. He came along tha road frequently, and into the yard by the house where I boarded, and I had, too often for my pleasure, opportunities to see him. As autumn advanced and the cold increased, tha green grass was turned brown by the frosts where it was not all eaten off, and the poor beast showed his want of food by the tightness of his skin, which was about all that was left to cover his bones and keep them from falling to pieces. Day after day I saw him dragging his feeble limbs along by the wayside, picking up what he could get to keep him from starvation. At length Thanksgiving came. What had that poor, starved, dying creature to be thankful for? Doubt not. There is a God in heaven!

On the night before Thanksgiving day there came a snow-storm, and tha snow fell to the depth of three or four inches. The morning following the Old Colonel came wallowing in the snow, along the road by my quarters, and the gate to the field, near by, being open, he walked in and pawed the snow from off the ground to get a bite of the stubble, his Thanksgiving dinner! It was the last time that I saw him. A short time afterwards I learned that a kind neighbor had persuaded his owner to allow him to be killed, and so be relieved from his sufferings. They led the poor, abused, starved Old Colonel to the woods. A kind blow laid him in the soft snow — warmer than the hearts of that father and those sons — to rest and to sleep! Some may say, never to wake; but I think there is an account to be settled. The law of retribution will be executed by a just God, the Creator of all! LEWIS JOSSELYN.

$5 Outfit sent free to those who wish to engage in the most pleasant and profitable business known. Everything new. Capital not required. We will furnish you everything. $10 a day and upwards is easily made without staying away from home over night. No risk whatever. Many new workers wanted at once. Many, Many are making fortunes at the business. Ladies make as much as men, and young boys and girls make great pay. No one who is willing to work fails to make more money every day than can be made in a week at any ordinary employment. Those who engage at once will find a short road to fortune.

Hard Crabs
FROM HAMPTON ROADS.
Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,
Normal School Grounds,
Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cases containing two dozen cans, each one filled with two pounds of crab meat. On every can will be found full directions how to prepare Crab Salad, and Devilled Crabs,--two dishes concerning which it is superfluous to say anything to those who have eaten them; but to those who have this pleasure yet in store, the recipes will be an introduction to a new and all-surprising delight of the palate. The treatment of the crab is, beyond peradventure, the most delicate and delicious of all sea-food, far exceeding in fineness of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far greater morsels in these cans, than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the waters, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For pic-nics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs! In spite of the amount of labor and material used, I have determined to offer them at the low rate of $6 00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D., at the rate of $1.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to

THE SIGNAL. "FISH IN SIGHT!"

THE SIGNAL. "FISH IN SIGHT!"

The great sea-fisheries of the United States have been, from the earliest history of the country, one of the chief sources of its wealth. In 1624, the Pilgrims sent a ship load of fish to England. In 1680, the profits of the Cape Cod fisheries were appropriated to found a free school. The importance of the business had become so great and evident at the time of the revolution, that one of the first means by which the British Government endeavored to reduce the colonies to submission, was an act depriving them of the right to fish on the Banks of Newfoundland. In 1873, the products of our national fisheries amounted to over eleven and a half million of dollars. The immense cod and mackerel fisheries form the most important part of the business, but there are other fisheries of great value. Herring are taken in the rivers and bays from North Carolina northward; halibut in the cold waters of the Banks and Greenland; menhaden along the coast from New Jersey to Maine. The oyster's favorite home is in the Chesapeake and Delaware bays; turtle abound among the Florida Keys. The menhaden is a fish of the herring family, but is caught not so much for food as for use as a fertilizer, one menhaden of ordinary size being counted equal to a shovelful of barn yard manure. They are sold on Cape Cod at one dollar a thousand, and 2,500 are considered sufficient for an acre of land. Any one with sensitive olfactories, who is obliged to live in the neighborhood of an acre so fertilized, will probably consider the number more than sufficient, and passing a successful fishing boat to windward, will marvel at the fortunate provision of nature which for every necessary occupation men willing to undertake it. The abundant oil of the menhaden is a very important part of its value, said to have been first brought to notice by a woman, a fisherman's wife. Observing the quantity of oil which rose to the surface of the water as she was boiling some of the fish, she collected it, and carried a bottleful to town, to see if she could sell it to a machinist. It is now used principally in leather dressing, and also, to some extent, by rope makers and painters.

The wholesale capture of the menhaden will in time, no doubt, make them scarce, but at present a hundred barrels are sometimes taken at one haul. They swim in shoals near the surface, in countless numbers, and from May to November the pursuit is carried on. Lookouts are stationed along the coast, and when they catch sight of a shoal pursued by a hovering flock of sea gulls, they signal to their fishing boats to hasten in and surround the prize. In 1873, the product of the menhaden fishery amounted to over a million and a half dollars.

INTERESTING AND SUGGESTIVE.

All classes of our readers will be interested in the graphic sketch below, from our regular correspondent, Mrs. Orra Langhorne, sister of Hon. Wm. H. Ruffner, Supt. of Public Instruction in Virginia, whose contributions to the SOUTHERN WORKMAN, Springfield Republican, Independent, and other journals, have special value as from a representative of the progressive class of Southern women of both social position and intellect, a class upon whose increase depends, to a great extent, the true union of North and South.

The charmingly told story of the old freedman's visit to the land of his fathers, while it relates some rough experiences, is not without hopeful suggestiveness to emigrants not hampered at the outset with his special disadvantages. This sketch will be followed in our next number by a companion picture of "An African in Virginia."

A VIRGINIAN IN AFRICA.

BY ORRA LANGHORNE.

One of the interesting people in Lynchburg, is a colored man named Elias, who went to Africa, after the emancipation of the Negroes in this country, and, being much disgusted with the land of his forefathers, returned to Virginia, as soon as he could do so, and is now quite content to end his days here. I had long wanted to hear his adventures, and had frequently sent him messages, so I was much pleased when he knocked at our door one Sunday afternoon this summer, and said he was the man who had been to Africa, and he understood that I wanted to see him. Uncle Lias is a tall, fine-looking, black Negro, about middle age, with an active figure, and well shaped head, on which he wears the hair cropped close to the skin. He has a pleasant, cheerful way of talking and a merry laugh, which is quite contagious. I told him he must begin at the very beginning, and tell me all about his travels, which he did in a very amiable, lively way, answering a thousand questions pleasantly, and seeming quite proud of having seen so much of the world. I will repeat what I can remember of his story, but wish the readers of the WORKMAN could hear it from his own lips, which would be far more interesting.

Uncle Lias says he had been hearing about Africa all his life, and, when he was a slave, he often thought of the wild, free country he heard the old colored people talk about, and wished he could go there. Then missionaries would come along once in a while, and give great accounts of what they had seen in their travels, and this would make him still more anxious to behold foreign lands for himself. He was not unhappy as a slave; his master was kind to him, and he had married, In early life, an excellent woman, who was a very good wife; still he often thought and dreamed of that tropical shore where such wonders were to be found on every hand, and he longed to go there.

At last, to his great surprise, he found himself and his family free, and, soon after the close of the war, an agent of the Colonization society came here, and held meetings and created a great stir among the colored people, and quite a large party was organized for emigration to Africa.

Uncle Lias's heart bounded with delight at the thought that he could at last realize his long cherished hopes, but he had great difficulty in persuading his wife to go with him, and she went with great reluctance. His old master strongly advised them not to go, as he thought the climate and the savage people would be very trying to people accustomed to a Christian country and temperate zone, but at last, finding Uncle Lias's mind was made up, the good old gentleman rendered him every assistance in his power, and, for a parting present, gave him a package containing $25.00 worth of pins, needles, buttons, beads, etc., which he thought would be useful to the emigrants in dealing with the natives of Liberia.

They had a prosperous voyage of some fifty days, and when at length they came in sight of the shore of Africa, Uncle Lias says no words can describe the joy of his heart. He declares that the most delightful odors were wafted to them, far out on the sea, and the landscape was more beautiful than tongue can tell. For a time, he was in ecstacies at the luxuriant foliage, the exquisite flowers, shrubs and plants of a thousand varieties, all sending forth intoxicating perfumes, the noble forests, the delicious fruits of new and wonderful kinds, the bright plumed birds, and the strange looking animals. But all this charming variety was soon forgotten in the overpowering weakness which came upon him from the enervating climate, and the terrible homesickness which possessed him when he began to take in the thought that he was thousands of miles from the land of his birth and the friends of his youth, himself and his family poor, sick and friendless in a heathen land. When they reached Monrovia, the agents of the Government, which is extremely anxious for the civilized Negroes from America to settle there, gave the emigrants comfortable quarters in a hospital, where they were told they must stay for six months, to go through the acclimating process. This they were obliged to do, as they all suffered from the terrible African fever, which soon attacked them, and many of the poor homesick people died. When least violent the fever is intermittent, and Uncle Lias says, that, in the intervals of his sickness, he would crawl out into the town a little, and look with great interest at the strange scenes around him. He saw no white people at all, except sailors, whose ships, from all parts of the world, were constantly coming and going at the harbor.

It took him a long time to become accustomed to seeing judges, lawyers, doctors, teachers, merchants, etc., of the Negro race, but they were all there, performing their various duties much after the fashion of white men in this country, the laws of Liberia being modelled pretty much upon ours. When visited by a physician, it was a pleasant surprise to a Lynchburger, who had known numerous Langhorne's at home, to be introduced to Dr. Langhorne, of Monrovia, an intelligent mulatto, educated in Philadelphia.

Most of the prominent citizens of the place were natives of America, chiefly from the Southern states, though a few had come from the West Indies—some of them are very rich, and live in considerable style, having many of the comforts of civilized life, with the luxuries of the tropics.

There were no domestic animals to be seen, except dogs and goats, and no vehicles, but plenty of hand-cars; that is, chairs borne by the natives, with long poles resting on brawny shoulders so accustomed to the work that the bearers trot along briskly with their burdens. There is much intercourse between the natives of the country and the citizens of the town. The desire for imported or manufactured goods brings the natives into the city, and the necessity for burden bearers and the produce of the country, keeps up a brisk traffic between them and the savages. Uncle Lias says a Negro-American cannot labor in Africa at all, but at once becomes a "boss," hiring from the chiefs of the tribes as many natives as he requires, and paying the wages always to his majesty, a hereditary ruler, with absolute power over his subjects, who must be content with what he sees fit to give them, after receiving the reward of their labor. The rule of these chiefs is often very rigorous, and they inflict very cruel punishments on such of their subjects as incur the royal displeasure. Uncle Lias said he had seen men with stakes run through their tongues, fastened to a tree, and left thus for days, and mutilations of the body for slight offences, are very common.

The natives seem to appreciate the value of education to some extent, and a man who can speak English well enough to act as interpreter, and understands trading with foreigners, ranks very highly among them. The citizens of Monrovia find this very inconvenient in some respects, as it prevents their keeping native servants, after they have learned English. It is very common for a well to do Negro American to take a little savage boy into his family, and they make very good servants when trained, but the chief of his tribe never loses sight of such an urchin, and about the time the boy becomes really useful to his employer and begins to talk English pretty well, some of the tribe from which he came will appear in the town, and, no matter how carefully the child may be watched, or how willing he may seem to remain with the family which had adopted him, when summoned by the chief, he invariably disappears, and when next heard from, is acting as interpreter for his people. This is, of course, discouraging and annoying to those who try to instruct the natives, but on the other hand, is a means of spreading civilization among the tribes. One of the city ordinances of Monrovia, forbids the natives, upon severe penalties, to appear naked in the streets of the town. This order is printed regularly in the principal newspaper, and if duly enforced, it is to be hoped will in time bave a beneficial effect upon the savages.

After our Virginian in Africa began to grow somewhat accustomed to the climate, he, with some of the other emigrants, went into the country about forty miles, to locate the five acres given to all settlers by the government, with permission to purchase as much more as they desire at a very low price. He now found himself in reality in a savage country. The farm he selected lay about three miles from a small village, made up of American Negro settlers, where there were a Christian church, and some evidences of civilization, but the jungle began at the outskirts of the hamlet, and was full of wild beasts and reptiles, which sometimes penetrated to the gardens of the villagers, and carried off their goats and fowls, and the surrounding country was full of wandering tribes of savages. The grass, almost as coarse and strong as reeds, grew as high as a man's waist, and roads were cut through it and kept open as the settler required. Uncle Lias says that, on his first trip to his new home, he heard a strange crackling in the dry grass along the path the guide was leading him, and once in awhile would catch glimpses of a large animal bounding through the jungle, apparently keeping pace with their party." In answer to his anxious inquiries, the guide told him "there was nothing to fear, it was only a leopard, and though there were plenty of them about, they never attacked a man, unless he were alone, and the beast was extremely hungry"! Uncle Lias thinks building houses and fences in Africa is charmingly simple work, as one only needs to cut as many bamboos as he wishes, and to procure the necessary sun out of rope grass which grows everywhere, and the bamboos being stuck in the ground are tied together in any manner desired, and a neat and durable fence and cottage are thus specially erected. Having, with the aid of a number of natives hired from a neighboring chief, arranged his establishment to his mind, our emigrant now returned to Monrovia with bearers, to bring out his family and furniture, and they were soon settled in their tropical home, which under the tidy hands of his wife, quickly assumed a comfortable appearance. As soon as their arrangements for housekeeping were complete, the emigrant planter began to put out a crop. He was never able to work a day while in Africa, but when strong enough, overlooked the native laborers, and found them docile and industrious. He planted coffee and tobacco chiefly, and having been a factory hand all his life, and understanding tobacco culture well, he raised and cured a small crop of the weed after the Virginia manner, and when he carried a sample of it to Monrovia for sale, he found the merchant's eager to purchase what they pronounced equal to the finest Havana tobacco. He sold his little crop for a dollar a pound, and the dealer agreed to buy all he could furnish at that price. This was, of course, very cheering, and the Virginian in Africa saw a fine prospect for fortune rise before him. His coffee also turned out well, but his health did not improve, and his wife grew constantly weaker, and more despairing. She never became accustomed at all to the natives, but feared and detested them, and mourned greatly over being unable to attend church in the adjacent village. Uncle Lias says he did attend service one clear starry night alone, and enjoyed it very much indeed. He had not gone far on his homeward way, however, before he found that a leopard was creeping along in the jungle near him, and although well armed against the attacks of such enemies, he walked trembling on his way, and was half dead with fright, when he reached the welcome shelter of his humble hut, and heard the same beast of prey growl with rage as he barred the door. Uncle Lias is very piously inclined, but after this he deemed himself excusable in staying away from church, as he was likely to be escorted home by a leopard.

There was so much that was novel and interesting around the emigrants, the soil was so fertile, the atmosphere so delicious, that when the fever at intervals relaxed its hold on him and he could attend to his business, and occasionally take little trips with other emigrants and some of the native hunters, into the country near them, our Negro-American could for a while forget his home sickness, and look forward with hope to acquiring fortune and position in a land which offers great inducements to those who can stand its tropical climate.

There were many varieties of delightful fruits growing wild about the country, with all sorts of nice nuts, and many vegetables unknown here. The chief food of the natives is a root called cassava, somewhat like sweet potato, and capable of use in many forms agreeable to the taste.

The trouble about raising it is that monkeys, which are very numerous, are quite as fond of it as the natives, and being very good judges of the proper time to gather the cassava, if the gardens are not closely watched a troop of monkeys will quietly appear in the patch some night, and each hairy visitor will wind his strong little tail around a cassava bush, and deftly pull up the root with which he will promptly depart. The natives retaliate by eating the monkeys when they can get them, and the most delicate prepared, makes very good eating. They also eat snakes, of which there are many varieties, from harmless little serpents, seen gliding about everywhere, to huge boa constrictors which furnish a banquet for a large party, and are esteemed a great delicacy in a land where meat is scarce. The great occupation of the natives is hunting, and they score or shoot many beautiful species of deer, antelope, wild goats &c. very timid at sight of man, but very good to eat.

Uncle Lias says words fail him to describe the insect and reptile life which abounds everywhere, in, under and above the earth, and is the torment of the country. The native doctors understand the virtues of medicinal plants and use them with surprising efficacy in case of bites from poisonous creatures, even the most deadly snakes, always accompanying their remedies with numerous incantations, and the use of curious charms. With diseases, however, they are less successful, at any rate with foreigners, and after lying for a while at death's door, when under treatment by a savage medicine-man, who dosed him and mopsiphatized in a heathenish manner over him, Uncle Lias ill-missed his African physician in disgust, and sent to Monrovia for an educated doctor.

The observations of our traveller upon his savage kinsfolk were acute and interesting, and he had evidently made good use of his opportunities for contrasting the natives of Africa with their cultivated relations on this side of the Atlantic. There was a cannibal tribe in his district, whom he describes as a brown skinned people with long silky hair. He felt great curiosity in regard to them, and once went with a party of hunters, into the cannibal country. He says they preserve the bones of their victims in their huts, and he saw many human bones hung up on walls, which were kept to be used in some mysterious manner at certain orgies, or possibly religious ceremonies, observed by these epicures. Salt has not yet been discovered in Africa, what they have there being imported, and it is much sought after by the natives, who are eager to trade their ivory, gold and other valuables for it, and use it with great care when procured.

Uncle Lias can hardly speak of the cannibals now, without a shudder, and as he had learned enough of the African language to begin to understand what was said by the natives, we can imagine his feelings on hearing a stalwart cannibal who had regarded him hungrily for some time, remark to a companion, "Mellem meu eat good, he get salt in his skin."

Our Virginian says, when this speech reached his ears, he promptly decided to go home and pay no more visits of observation to the cannibal towns, lest his appearance should prove too tempting to his entertainers; and he accordingly made all speed to get out of their dominions. Uncle Lias says the native Africans have many primitive arts among them, which they conduct in a slow, laborious way, of course altogether without machinery, or even satisfactory tools, but nevertheless, they can are anglish a good deal after their own fashion. Iron, gold and other metals are found in the country, and they make rude agricultural and warlike implements, cooking utensils, and also ornaments of many kinds of which they are extremely fond.

They have no use for money, all their business being done by bartering native products for imported goods. If given a piece of money, or metal in any form, they will receive it with pleasure, and, sooner or later, it will appear again in the shape of a bracelet, anklet or some such article of apparel; often very ingeniously wrought by the native artist. They are always anxious to get possession of arms and ammunition, but seldom have among them anything of later invention than an old flint lock musket, which some enterprising dealer has sold them at an exorbitant price.

As for clothing, it well known that the people of tropical countries care far nothing beyond a waist-cloth, with ornaments for the head, neck and limbs. Uncle Lias says a friendly chief sometimes paid him long visits, who dispensed with the customary clothing about his waist, but on such occasions, was always particular to array himself in all the contents of his jewel case, which consisted of a really handsome silver belt, clasps for the arms and legs, with sundry beads, buckles and jingling pendants on the head and neck; evidently believing himself splendidly attired. This stylish visitor would often spend a sociable day with the emigrant's family, to the great disgust of his hostess, and would enquire with much interest about the manners and customs of America. Most of the natives however, less fortunate in the way of jewelry, wear the loin cloth and are eager to get calico, cottons &c., for such uses. They weave a very strong and durable cloth themselves, a few inches wide, which is pretty and neat looking, and when sewed together in strips, as the natives do it, stitching with needles and thread of their own make in dextrous fashion, this cloth makes an excellent bed-cover or wrapping.

Sometimes a dandy chief will have a garment made of several of these strips of various colors and many yards long, which he will wind about him in a peculiar and very graceful manner, somewhat as the Highlander does his plaid, and a stalwart savage thus equipped presents a very handsome appearance, and is extremely proud of his outfit. While most of the natives are rather indifferent as to clothing, they are very particular about tattooing their bodies, and each family, or each tribe, has its own work, and thus preserves its identity generation after generation.

A few months after our emigrant's family settled in their African home, one of the two children died, and the poor homesick mother languished more and more, until about the end of the year, when she told her husband that she felt the approach of death, and took a very tender leave of him and her little son,

Southern Workman,

ISSUED MONTHLY.

S. C. ARMSTRONG, H. W. LUDLOW, } *Editors.*

MRS. M. F. ARMSTRONG, MR. W. N. ARMSTRONG, MR. T. T. BRYCE, MR. B. T WASHINGTON. } *Regular Contributors.*

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application.

To secure safety, it is important that money should be sent by checks, Post office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

For further information, address

J. F. B. MARSHALL, *Business Manager, Hampton, Va.*

Entered as Second-class Matter in the Post office at Hampton, Va.

The Southern Workman, devoted to the interests of Negro and Indian civilization, is edited and managed by the officers of the Hampton Institute, and printed on the School Press by colored youth trained in the office. Subscriptions are a help to the School. It is sent on trial for four months for twenty-five cents. Job work, from all parts of the country is solicited, and will be done cheaply and well. Estimates will be sent on application.

In November last, the Annual Report of the Hampton Normal and Agricultural Institute was published, and sent to all contributors whose names appeared in its lists.

It contains the Reports of the Principal and Treasurer, and the substance of those of the heads of industrial and other departments, up to the close of the last school and fiscal year, June 30, 1880. Those who support this school thus have a record of the annual business meeting of Trustees, an outline of its entire history, an account of the years doings, plans for the future, the name of each giver with amount given, and a detailed statement of the expenditures covering thirty five printed pages, which shows salaries of teachers, profits and losses of each industrial department, earnings of students and expenses of every kind, together with a list of investments and a schedule of the entire property held by the Trustees.

A careful reading of it is hoped for, and criticism and inquiry is invited.

It is felt that nothing less than such a statement will meet the requirement of honest stewardship of the funds entrusted to us.

EXPENSES FOR 1879–80.

Salaries of Principal and 2 Clerks.	$2,687 28
" " Treasurer and 3 "	2,997 07
" " Teachers and Heads of Depts.	15,239 91
Traveling Expenses of Officers, Curators, and Trustees	1,423 33
Expense, Stationery, Insurance etc.,	5,101 27
Improvements, (not incl'd Academic Hall and Saw Mill)	3,203 83
Repairs	2,201 84
Machinery, Implements, Furniture &c.	2,2 5 88
	$38,691 04
Beneficiary aid for Colored and Indian Students	4,461 08
	$43,552 12

Keeping an exact account with each one of three hundred and thirty laboring students, and ten industrial departments, besides a run of general business, connected with the care of a large property and the production and consumption of nearly four hundred people, is a work of infinite detail.

The Executive department has state and national relations, secures positions as teachers for a little army of graduates, collects funds, and has the general management.

There are thirty officers and teachers, of whom nine are gentlemen, and the rest are ladies. Our problem is how to maintain this large force of three hundred and thirty hoarding students and thirty officers and teachers, with their families, for eight and a half months, and half this number the rest of the year, for, owing to the industrial system, the school is never closed and needs over a hundred workmen all summer. Indians and others must be kept the year round, because their homes are too remote to go to.

The total annual expenses amounts to over $40,000, of which the State pays $10,000, and friends the rest, chiefly in annual scholarships of $70, and in gifts of from $10, to $200. Occasionally a larger sum is sent. Government payment on Indian account, is not included in the above estimate as it barely reimburses cost of board and clothing, and pays no part of the cost of their education.

This is about the cost of a luxurious family in metropolitan life. The result of it all is over 300 teachers already in the field supplying a pressing and tremendous need, and classes of from 40 to 50 graduating every year, besides many unable, for various reasons, to graduate, who do excellent primary school work.

The Hampton Institute rests directly on the general public for the support of an undenominational Christian work for those committed to its care, whom it trains in respect to hand, head and heart, fitting them not only for the field but also for any higher attainment they may seek.

To keep it before the public has required great efforts, and till this year a salaried agent. Hereafter there is to be not a dollar's salary, commission, or any compensation whatever to secure funds for this Institution, except to an agent of this paper who receives a small salary. The Rev. T. K. Fessenden, Trustee and former Financial Secretary, will continue his efforts as his strength shall allow, with travelling expenses paid, which, with those of the Principal, are now the only cost of collections.

Their labors are not light, yet the school has a basis of public confidence that assures its support during good behavior

This little paper, now nearly self-supporting, is an important ally. Those who aid in its circulation are most useful helpers.

We are not justified in asking for a renewal of contributions, till a detailed account of all receipts and expenditures of the previous year has been rendered to givers.

Exacting this of all charities would have a must wholesome effect, checking the unworthy and building up the deserving. I am often asked as to colored solicitors for Southern schools, but know very little of them. The true way is to ask for their accounts. If they don't know them, nobody does. Honest work would then be encouraged.

It is pleasant to hear one say "You are doing a good work; here is money," but better to hear "I know where my money goes; here is more" The one merely helps, the other both helps and puts one on his guard. None of us are too good for an investigation.

Any presumption of correctness is intolerable. Those of us engaged in moral and educational work are assumed by business men to mean well, but to know little of sound business methods. They help us kindly, but would do vastly more if they felt surer, not of our motives, but of our financial skill. The poor and the needy suffer from our want of it. Sins of omission rather than of commission are the trouble. We are not half modest enough in respect to our business ability.

Hampton never did a wiser thing than in publishing its list of securities, (some of them not paying,) in the hard times. We still do it. The only truth is the whole truth.

A New York business man who recently contemplated adding an important branch to the industrial department of the Hampton Institute, had his lawyer inquire into the title of the property, the charter, and into everything that possibly might affect, in any contingency, the generous provision he intended to make. He secured a abstract of title running many years back, satisfied himself fully and then gave fifteen thousand dollars. He knows the bottom facts of the school.

We Trustees might all have been willing to have given our bodies to be burned for this cause, but the inquiry was no less in point for all that.

It must not be assumed that Trustees or Directors, because good men, have searched out everything. Men with the time and ability to do such work are exceedingly hard to find.

First class trusteeship is rare, and most precious to those who have the benefit of it. Such duty is usually, from press of other duties, too easily taken, and the needed thing is not done.

The way to get money is to get confidence, the way to get confidence is to earn it by full disclosures, to all entitled to know, of all facts relating to the work for which appeal is made, so that all use of money, and the cost and method of getting it are understood.

Untold wealth is kept back from the needy and deserving, because those who stand between them and the benevolent assume, rather than prove, their claims on the latter.

S. C. A.

We are usually exasperated at every new book that presses itself upon our attention, for, while claiming "to supply a want long felt, "it is apt to be the most dry and disagreeable form in which knowledge is presented to the youthful mind.

"Swinton's Supplementary Readers," which recently came to our table, seem to be an exception, for they have point and freshness, and seem just the thing for our various grades of Indian and Negro classes.

Mr. William N. Armstrong, who for the past year has contributed to the editorial columns of the "SOUTHERN WORKMAN," has accepted the appointment of Attorney General at the Hawaiian Islands, and is on his way to that country to aid in working out the "Hawaiian problem," which is one of the peculiar things of modern civilization.

An enlightened minority must somehow manage an incompetent majority; for all are voters, and the aborigines outnumber the foreigners many times. This is made worse by a vicious foreign element that works on the prejudices of the natives, who, by themselves, could be controlled by wise influence.

The good white man seems to be the blessing of the weaker races, the bad one their curse.

Nowhere in the world have race relations been so illustrated as on these Islands. To find a dozen different nationalities and languages on one sugar plantation is not uncommon.

The present Hawaiian Ministry is the result of a reaction from the work of an adventurer well known in America, who got into power by playing on the weak points of his Hawaiian Majesty. He is now dismissed, and good men have been invited to become the King's advisers.

Mr. Armstrong was in former years a schoolmate of King Kalakaua.

American planters at the Sandwich Islands, kind, just, good men, are ready to pay sixteen and eighteen dollars a month to good laborers on their sugar plantations. Three thousand are needed at once. Board and houses are plain but adequate; though the latter need improvement.

The workman is fairly treated in the courts, can vote without interference and is sure of his pay.

The demand for labor is very great; the climate is delightful. An effort to get there would meet with every encouragement. The Hawaiian planters have for months been longing for the surplus labor of Kansas. It would cost less than $100 apiece to get from Kansas to the islands, and advances for this purpose would be made by the planters.

EDITORIAL CORRESPONDENCE.

THE CHINESE QUESTION.

SAN FRANCISCO, *Sept.*, 1880.

Every thinking American who visits California, should study up the Chinese question, for his own enlightenment, and that of those whom he can influence. The race problem has been put upon this country as upon no other; every contribution of fact or thought upon it, is important; the neglect of one whole duty in this matter will be at our peril.

I have conversed with a prominent editor and orator of this wonderful city, who is an able exponent of anti-Chinese policy.

He said in effect: "The brotherhood of man "don't count in this question. I believe in "America for Americans; the family idea.

"This is our farm, those whom we don't "want must keep off. Any sentimental brotherhood doctrines leads direct to pro-Chinese "policy, and one may as well throw it over-"board at the start."

I asked for specifications against the Chinese. Whom do they injure?

The reply was; "Washermen; Chinese do "all the washing; no chance for anybody "else.

"Cigar makers; Germans led in the business "till a few Chinaman, who worked cheap, "learned it, and drove them out of it.

"The slipper trade; Chinese bought old "sole leather and pieces of carpet, and made "cheaper slippers than anybody else.

"Shoemakers; a few Chinamen were employed by Yankees, learned the trade and "discharged the Yankees.

"They were employed on sewing machines "first in making overalls, finally in the finest "linen work, ladies elegant underwear etc., "taking the business to themselves.

"They are superior mechanics, more industrious and economical than Americans.

"We are fighting the Chinese because of "their virtues.

"They are their own bankers, they import "directly from China, as follows:

"Food, rice, tea, dessicated vegetables and "dried fish.

"Clothing; all is imported except their "boots, pants, and hats; boots and pants being made out of American goods; the latter "on sewing machines.

"They consume considerable of our home "productions, pork, poultry, brandy, but "largely use a cheap liquor from home.

"They are supposed to pay a poll tax of "three dollars apiece which you get when "you can catch them.

"They mostly lease, owning little real es-"tate; pay their large licenses promptly; are "law abiding and easily governed.

"There is no industry that the Chinaman "don't conquer when he attacks it, but so far "they hav'nt been able to drive Italians from "deep sea fishing, yet are steadily pushing "them out of the garden vegetable business, "tho' an Italian can live on a turnip per day.

"Chinese glean abandoned mines. Ameri-"cans must have big returns. They are con-"tent with little, and plod for their daily "bread which is quite un-American. They "dont go into deep mining.

"Few females come over, usually low ones "at that. In the cities, vicious Chinese wo-"men tap on the boys' windows who are solici-"ted to cheap indulgence. Much loathsome di-"sease results. Miners and sailors are their "principal victims.

"They build railroads, but ten thousand "New England men with families would be "better. They are good blasters. Work over, "they bet, eat and sleep well.

"They have reclaimed overflown and "swampy lands that nobody else would touch, "notably in the valley of the Sacramento river. "They build better dykes than the whites.

"They are of great service to the fruit "raisers of California who could hardly do "without them; are rapid berry pickers.

"They have, in many ways, added to the "wealth of the country. They have brought "into use vegetables heretofore discarded

"They are the Jews of Asia. They are a "SUPERIOR RACE."

By way of further illustration, he said in effect. "My friend A built a new shop "for turning broomhandles and hired six me-"chanics at $4,50 per day. B, a German, "came in and drove him out of the business "by cheaper labor at one dollar a day.

"C, a Chinese, came in, took an old barn, "slept in a loft, cooked in a brass pot, kept "horse and wagon under the same roof, and "living on next to nothing, drove the German "out.

"The "Brotherhood of Man" theory don't "work well for the Americans in California. "See!

"A lived in a decent house with his wife, "sent his children to school and bud a pew in "church.

"B discounted all this and beat A.

"C, discounted B, lived like a dog and starved him out.

"This spirit will yet secure to Chinamen "the commerce of the Pacific ocean. They "have been hoarding the world's silver three "hundred years.

"The issue is between civilization and bar-"barism, Christ and Confucius; Asiatic dark-"ness and European light."

My friend quoted from a recent speech of Gen. Garfield who said in substance as follows; "The Chinese monster is turning over "in its bed. Russia sends a hundred thou-"sand men from the North against him, but "they fall back. The navy yards of the "world are making ships for the Chinese na-"vy. She has arms of precision the use of "which is taught by German drill sergeants. "She has embassies all over the world; at "Paris, Madrid, Berlin and Washington. "She is crawling over the islands of Oceanica. "She crowds in everywhere to pick up stray "dollars; sends cigar makers to Havana; em-"igrants into the Southern States of America, "and boys to be educated in Europe and "New England."

"What does this new departure mean?

"A thousand years ago, China was under a "military power; later, under scholars selected "by competitive examinations. There "may be a change back to the rule of sol "diers with forty millions of men under their "orders."

My informant frankly stated that recently a leading Capitalist had said, "In twenty years, you will be so ashamed of your anti-Chinese views that you will disown what you now say"

I next conversed with a large minded clergyman, who has stood up courageously for justice to the Asiatic, who talked about as follows: "Machines work cheaper than China "men; why not then outlaw machinery? Is "it rational or possible to regulate the move- "ments of men? The Chinese say "We come "under a treaty forced upon us, we did not "seek this privilege."

"The logic of facts is on the side of the Chinese.

"The cheap productions of the East in "clothing and other ready made articles, pre- "vent manufacturing here at present prices "of labor. The sewing girls of New York "and not the Chinaman from Hong Kong, "suppress factories here.

"I give my two Irish girls each twenty-five "dollars per month. They would get in the "East, twelve or fifteen dollars per month. "There is a like difference in other occupa- "tions. The Chinaman here is a social and "political pariah; what the Negro is in the "East.

"The Democrats went anti-Chinese in 1868, "securing the Irish vote and electing their "government. The Republicans felt compelled "to adopt the same policy. Both are now "anti-Chinese. The Pacific Coast should "cultivate China, get into her, sell her wheat "and other produce.

"China is becoming a diplomatic and com- "mercial power. She will withdraw her old "rules against going into the business of the "world, and enter the carrying trade as a re- "mendous competitor."

In 1876 seven California state senators made a formal investigation of the Chinese question which was published.

There is rather an anti-Chinese flavor in their questions; and favorable testimony which may be picked out of one hundred and seventy pages of questions and answers, has some value.

It appears that the Chinese, as a rule, leave their wives, who are virtually slaves, at home; that involuntary emigration, or the "coolie trade," is discouraged by the Chinese government, which is too weak to remedy it, but does all it can to secure pledges for the return of exported Celestials, who are taken away under treaty provisions forced upon it by cannon planted around Peking; that the "coolies," a low thieving class, and a bad, floating, host population from seaport towns, are the bulk of emigrants from China; that the Chinamen who come to this country come *voluntarily* on the British part of Hong Kong, which is as much a part of Great Britain as the Isle of Wight; whence they would come in streams, going there from Canton and elsewhere, even if we stopped treaty relations with the Empire.

About fourteen thousand come over yearly, and ten thousand return alive, and many dead, paying their passage (forty dollars) or it growing and paying up with enormous interest, later in California.

The celebrated Six Companies of San Francisco, with their Chinese Agents, manage this business. Without a pass from there, no Chinaman can get steamship passage to San Francisco. These six companies receive each Chinaman, enroll him according to locality at home, make advances, negotiate his labor contract, help him in trouble, using sometimes high pressure to keep him to his agreement; and, on the whole, appear to be a good thing for "John," as he is everywhere called. Just now the Chinese are going back in unusually great numbers, from the scarcity of labor and other causes. "An absolute necessity," said an intelligent witness.

The Rev. Dr. Speer a very high authority, calls the Six Companies "institutions which have no parallel for utility and philanthropy among the immigrants from any other native or people to our wide shores."

Chinese immigration, except that of women, to San Francisco is *voluntary*: it is no part of the atrocious coolie trade which centres at Macao. No contract Chinese labor goes from Hong Kong.

There were in 1876, about thirty thousand Chinese in San Francisco, and not far from one hundred and thirty thousand in the state, making one-sixth of the state population. Not over three thousand of them are women. About fifteen hundred are regular criminals.

After twenty-four years of immigration, the present total cannot exceed one hundred and fifty thousand in all these United States.

CONDITION.

They disregard fire and health ordinances; fifteen or twenty living in a small filthy room, doing their cooking there, subsisting on ten or fifteen cents a day, doing the same work as a white man with a family which he is trying to educate, and which cannot live on less than two dollars and a half per day.

This is the gist of the whole question.

Is this fair to the white man? Shall any thing be done about it?

While the Chinaman is quick to learn, he does not do over half a good day's work of a white man, but works and lives three times as cheaply.

"They learn by looking on; then go into "business by themselves. For business men "to employ Chinese, is simply putting nails "in their own coffins. Every Chinaman employ- "ed will be a competitor, who will be ruin "to the whites."

Chinese laborers are seldom trusted, are expected to cheat when they get a chance. Security against their stealing is usually required. Lawyers don't trust their oaths; they can be hired to swear either way; perjury is very common, but they stick to contracts better than white laborers; they'll do anything for self interest. There are plenty of whites who are just as bad.

San Francisco has upwards of a thousand Chinese prostitutes, and scores of low houses, some three hundred lottery offices and a hundred gambling halls. The latter get along smoothly by playing the police five dollars a week apiece. The gamblers collect large sums, as much as eight thousand dollars at a time, to fight the law. They intimidate Chinese witnesses, and kill if necessary. There have been seen not a few placards offering six or eight hundred dollars reward for the death of some specified man, usually an informant; many have felt the murderous bullet or cold steel. None are more cruel to the Chinese than the Chinese.

The State Commission ascertained that over a thousand Chinese women have been imported, costing in China from one to three hundred dollars, and selling for from six to nine hundred dollars in California. When sick or old, they are turned on the streets to die.

They are well treated if profitable, abused if unsuccessful; they are forced to solicit patronage; in any are owned by Americans.

These women hate their life and would gladly escape. If they seek refuge, they are arrested on bogus charges for larceny etc., and brought to the machinery of American courts in order to protect this infamous business; a Chinaman aids their escape at the risk of his life.

Vile diseases are multiplied by this class and the seeds of wide spread ruin are scattered. It is said that no more of this kind are now coming.

There are, however, as many places for liquor selling in California as there are Chinese prostitutes, and through the former is the high road to the latter.

Is there any remedy for these evils? The following are proposed.

Negotiation with the Chinese government to prevent the lowest class coming over in such numbers. That is yet untried, perhaps impracticable: the Empire undoubtedly is disposed to do all it can, but the central government is weak.

Stringent police regulations. Many good men declare this to be sufficient. The objection is the great cost of an adequate police force. But the pinch comes who watch their low dens make money in bribes. The leading Chinese merchants of San Francisco said in a petition to General Grant.

"If officers would refuse bribes, the unprincipled Chinamen could no longer purchase "immunity from the punishment of their "crimes."

The profits of Chinese infamy go largely into white men's pockets.

Chinese money, *versus* the police force, gives a poor prospect for thorough work in the filthy Asiatic portions of the city. The state has made wholesome regulations as to cleanliness and space in the lodging houses.

Chinamen could be made to live in suitable rooms; well-enforced laws would break up the dirty crowded dens which disgrace the town and make possible the low cheap living that exasperates civilized tradesmen. Better living will cost them more and reduce the vast disparity of daily expenses.

San Francisco claims to be "the best governed "city in the world," but a few filthy blocks, by their ill gotten gains, defy her power.

The Chinese assist each other by perjury and in every possible way, and a campaign of purification would be a hard one; but it could be successful.

California lets the mischief work, fails to do her whole duty, and cries out like the "Chinese must go."

Yet, by all admissions, the evils are chiefly prospective. It is clear, even from the testimony of intelligent anti Chinese, that the present number is needed to maintain the industries of the state, and it is quite as generally agreed that a large increase would be a serious injury to the State.

The Chinese Question, as one of cheap labor, is, practically, "Shall the Chinamen be driven away in order to continue the monopoly of unskilled labor to the Irishman?" The battle is not, as political orators put it, "between Christ and Confucius, civilization and barbarism," but between the Asiatic and the Irishman. The vote of the latter is the inspiration of the Anti-Chinese policy of the Coast.

Look at the kind and character of the witnesses brought out on either side.

Read the speeches, pro and con; the following from the Report of the State Commissioners, for instance: "I've been wurrickin' amongst these Heathens as foremin and head boss over some fifty'em, and you bet your life, I knocked 'em down whinever they took any airs on themselves with me. I am a white man as is a white man, Mr. Prisidint. I claims as how while a man is a white man, he should nither *be* a white man or have the counthry."

There are questions on which a man has no right to be heard unless he has a character.

Compare the elevated, dignified tone, as well as the business soundness of the Chinese merchants' petition, with that of their assailants. Which side is most Christ like? On which side is the barbarism? American hoodlums and street Arabs, or the wagon loads of Chinese who are welcomed to our shores by showers of stones and run a gauntlet of cruelty, till, with bloody bodies, and broken heads, they find refuge with their own people.

WHAT DOES THIS COUNTRY DO FOR THE CHINESE?

It enriches them with millions of money most of which they send out of the country. It gives them cheap, good and bad, on the whole liberalizing, which carried to millions of returning Celestials scatters abroad. Three thousand working men in San Francisco alone, are reported to be daily studying our language in Christian evening schools, and thousands more are in contact with the true spirit of the nation in business, and in excellent families; as domestic American family life is doing for the Chinese what it did for the Negro in slave times, a quiet but most telling work. Scores are in Eastern colleges. Heathens do not mask the entire front of our civilization.

Industrious and orderly living has, among Chinamen, far more votaries than vice. In 1877, only one hundred and ninety eight were in State Prison, while three hundred and forty seven whites were there; in the alms house were one hundred and ninety seven Irish, not a Chinaman; six thousand arrests for drunkenness in San Francisco but not a "heathen Chinee." They however use opium as whites do whiskey. It's useless and destroys them, is equally demoralizing but not disorderly in tendency.

I believe, after reading pages of testimony to their devilish doings, that the Chinamen in our land are an entering wedge for American ideas in their own.

The Negro in slavery was doing more thinking than many supposed, his elevation was ridiculed by those who professed to know him best: so our yellow skinned neighbors may be changing more than we dream of. I am told that half of them now would cut off their pig tails if they dared. The contact of people is a far more effective educator than common schools; few realize its subtle, far reaching influence.

WHAT DO THE CHINESE DO FOR THIS COUNTRY?

They build our railroads, harvest our fruits and grains, reclaim our swamp lands and sell us rice. They pay their rents, taxes and debts. Do they depreciate property? Then why are Chinese rentals steadily rising, amounting to over a million yearly in San Francisco? Who suffers?

Do they starve out others by cheap labor? How can this be, when a Congressional Committee from Washington ascertained that the "Scale of wages paid to white labor in California is generally higher than in the Eastern states," and "Manufacturers testified that "without the competition of Chinese labor "they could not run their factories a single "day, but, with Chinese labor to make their "business possible, they were enabled to give "employment to a large number of white laborers."

"While the presence of the Chinese here has "reduced the exorbitant price of labor which "prevailed in the early days of our history, "it has opened industries and made it possible for poor white men with families to "come here and live." This class was never so well off as now.

"Cheap labor" is a silly war cry when Chinese are paid as much as the same kind of labor in the East. Who will find me a good Celestial cook on low wages?

The Chinese memorialists asked, "Is not the result of the daily toil of one hundred thousand laboring men any benefit to this country?"

Their merchants every year send out get millions through the banks, they keep busy countless ships, sailors, stevedores and draymen, and urea benefit to insurance companies.

"There are," Mr. Gibson says; "no Chinese "house painters, brick layers, glaziers, plumbers, blacksmiths, printers, bookbinders, "tailors (of American clothing,) milliners or "mantuamakers, no backers or insurance "agents. They offer no competition to our "lawyers, doctors, preachers, school teachers "or to any profession whatever."

The New York Tribune once said that the people of California, in their present hostility to the Chinese, seem to be chasing a phantom.

RELIGIOUS WORK.

The state Committee of investigation made careful inquiry on this point, which went to show that the more a Chinaman knows of the life and teaching of Christ the worse he is; that their Christians assume piety as a means of money making and are, throughout, a swindle. Many are doubtless sincere. The character of the testimony on this point depended, evidently, very much on the character of the witnesses.

It was at the same time shown that Chinese Christians are separated from their people, ostracized and liable to injury; that conversion is rare and difficult.

"The Chinese in America" by the Rev Otis Gibson, himself for ten years a missionary in China, from which I have got valuable information, states that up to 1877, the Presbyterian Missions commenced in 1853 by Rev Mr. Speer, had received eighty members.

The Baptist mission opened in 1854 by the Rev. J. L. Schenck, has admitted fifteen.

The Congregational mission, under the American Missionary Association of New York, has received forty-five. This work is in charge of the Rev. W. C. Pond. In 1875, over eighteen hundred Chinese attended its schools in different localities.

The Episcopal church has of late commenced a zealous work for the Chinese.

The Methodist Mission under the Rev. Otis Gibson, takes a leading part and has received fifty into its fold.

All these societies have opened schools to which Celestials resort by hundreds, first only to learn English, then Bible reading, thought and Christianity.

"For every professing Christian Chinese," says Mr. Gibson, "we may safely reckon ten or fifteen more who, from the same influences, have been led to renounce and despise idolatry, and in theory at least, embrace the Christian doctrine of one God the Father of all. The number of such results of missionary labor cannot be less than four or five thousand."

None, probably, are poorer judges of the character of converts than the anti-Chinese who ridicule the idea of conversion. Missionaries themselves are apt to take too hopeful a view. The absolute truth is hard to get at.

They are undoubtedly very good or very bad; martyrs or mercenaries. That the former exist, that Chinamen are lead by Christian lives in San Francisco, under difficulties that no whites dream of enduring, is doubtless true. They are in the lowest ranks: they may be in the highest too. An obscure Chinaman enduring persecution for righteousness sake, is worth more to the world and to progress than a selfish millionaire.

The best things in missionary work attract little attention; are not always in sight; a "fraud" is sure to be found out and advertised. One sincere man over balance ninety nine sincere men in effect on public sentiment.

THE UNARMED INVASION.

The admitted objections to Chinese immigration are: First, their very gradual assimilation to us; Second, the danger of an "unarmed invasion."

Professor S. W. Williams, in an article in the Social Science Journal of December, 1879, says:

"Nearly all the Chinese here came here from a strip of territory not much larger than the State of Connecticut, lying south and southwest of the city of Canton; all have sailed from Hong Kong."

Of the fears of excessive immigration he says, "These are as baseless as the fear that the Indians are going to unite in league to regain their ancestral hunting grounds."

It is prevented, he declares, by a strong opposing public sentiment, by a love of home, by the known risks and cruelties suffered, by poverty and by a pride of country.

"If two fifths returned home when the land was open and calling for laborers, and the building of railroads gave work to thousands of their band, is it not as certain as a thing can be, from these facts, that the supply of workmen will be proportioned to the demand?"

"A second deterrent cause," says Prof. Williams, "is a strong sectional antipathy between different provinces, leading them to "shun each other like the clans of Scotland. "Constant strifes arise, often resulting in "much loss of life. This tends to confine the "emigrants to our shores to the district near "Canton. Men from Canton meeting men "from Amoy, Fuchow, Ningpo or Tientsin, "would be mutually unintelligible. This "feature almost compels emigrants to follow "the lead already opened."

Those from Amoy go to Manilla, from Swatow to Siam, and so on.

"The total arrivals from China during a "quarter of a century, have not equalled the "number of persons who have landed at New "York from Europe in six months during

"most of this year."

The following from Prof. Williams's paper is interesting.

where they were the objects of loquiy; unable to talk an intelligible sentence of English, even if they could read their own and given to loose distinctions of *meum* and *tuum*.

Akie was over forty years of age, awkward at first, untidy, shovelled his rice down his

how they "pigged in," smelt the sickening opium and other odors, looked into shops, saw the inside of a theatre which was open from ten a. m. till midnight, with no intermission play and incessant acting, tasted

"most of this year."

The following from Prof. Williams's paper is interesting.

"The Southern Chinese alone have immigrated to foreign lands. * * *

"The emigration into Malaysia and the Indian islands has been going on for two centuries greatly to the advantage of the native states. * * * The prosperity of Siam and Borneo has largely been owing to this class of their population; and even in Java, where the Dutch closed their ports against them in 1840, they have recently been invited to return as mechanics and traders.

"The custom of these Southern Chinese has been to pass to and fro; this gradually diffuses a knowledge of foreign countries, and made it easier for the natives to go to the Gold Hills of California and Australia. Ship-owners profited by and encouraged it.

"The Cubans, Peruvians and English desired to import Chinese laborers; the ignorance of the latter led them to suppose the cost of China was into the Gold Hills. Hence this coolie (quasi-slave) trade was greatly aided by *free* emigration to San Francisco and Melbourne, but the coolie trade and the voluntary emigration are entirely different."

Prof. Williams sums up the subject as follow: "We call them *Heathen Chinese* and so, unhappily, they are, but they brought with them industrious and quiet habits, and during the past twenty-seven years have added largely to the resources and wealth of this country. They have spread themselves over this and the neighboring states wherever their labor was wanted, and have given general satisfaction in those branches of unskilled labor for which they were fit. It is impossible to estimate the money value of this industry; but the evidence taken by the Congressional (Morton) committee proves that, without their help, many enterprises now in full operation would not have been attempted when they were much needed.

"Among such enterprises the Pacific Railroad stands prominent, and one of its leading managers testified that the Chinese laborers had given more employment to white laborers than they could otherwise have got, and that the road could not have been completed for many years if these Asiatics had not been available. Over a million acres of tule lands have been reclaimed, which would otherwise have lain idle to this day, by irrigating canals for farms, with dams and sluices for the mines all owe their existence to this source. One witness stated that without Chinese aid the population of California could not be maintained at more than one half its present amount, and in regard to cultivation of wheat, he assured the committee that it could not be profitably raised at all if the cost of production were increased. I was told that in September, 1870, four hundred thousand bushels of wheat were ready for the sickle, and that this crop could not have been moved unless Chinese laborers had been there to put it on board ship at a cheap rate. The only thing to be done with it was to let it rot or burn it.

"The reallienations of labor are so great that one must see that it is nearly impossible to separate out one branch from all the others, and that to place the benefits of Chinese labor at a figure like three hundred millions or four hundred millions is to deceive one's self as to its true value. It is the way, however, that we are ruined by Chinese cheap labor."

"The three hundred or four hundred millions includes one hundred and eighty millions of wages which are sent home or taken home by Chinamen whose vocant places settlers can fill if they choose."

"The plain fact that the struggle over the Chinese question on the Pacific Coast is only another form of the labor question. Illustration. A patriotic American employed an Irishman to saw a load of wood for a dollar. He was soon seen quietly smoking as he watched a Chinaman doing the same job for twenty-five cents."

Prof. Williams's tribute to Missionary effort could be used without changing a word, with reference to all the "despised races" of our land.

"The conduct and condition of these people would, I am sure, have been far worse than these figures indicate, if it had not been for the untiring efforts of men and women around them. These efforts have been going on nearly thirty years, and only those who have lived in California, can appreciate the perseverance, the patience, the care, and the faithfulness shown by many unpaid teachers in Sabbath and evening schools, as well as others belonging to and conducting more regular mission work. Statistics do not convey a just idea of the results of this benevolent work, which has largely been of that preventive and reformatory nature that helps men to be better, and keeps them out of jails and saloons, to the great advantage of society. Coming directly from their native hamlets in Kwangtung, across the ocean, into a city where they were the objects of insult and obloquy; unable to talk an intelligible sentence of English, even if they could read their own tongue; not a law of the land translated into it to guide them; they naturally huddled together into their own quarter for safety and society. As they left San Francisco to seek work in the country, these kind friends, of whom I speak, found them out, and began to teach them English, by telling them the old, old story, which never wears out. Thus they became acquainted with the highest truths and the best rules for conduct, while flitting themselves for such work as they could find, by learning to talk and read English. These teachers felt that God, in his providence, had brought them to our shores for some other, higher end than merely to be our Gibeonites, and well have they performed their work. While the legislators of California seem to have exhausted their ingenuity in devising, from time to time, all the contrivances to tax and fine these people which could be brought to bear on them, their real friends were opening schools and meetings, and showing them wherein the true glory of this land consists."

He presents the following figures. Total average attendance,

At schools for Chinese	825
Total roll call	2,750
In Sunday Schools, average	1,100
Roll call of Sunday schools	3,300
Chinese baptized in United States	400
Chinese pastors, teachers and helpers	15

He mentions a Chinese Young Men's Christian Association with branches over the country.

The Chinese sent twelve thousand dollars to aid the sufferers by the yellow fever in the South.

The Congressional Committee found that "farmers, tradesmen, mechanics, peddlers, miners, and workmen all agreed that they could not hold their own against the Chinaman, and without intending anything of the sort, they bore the strongest testimony to the skill, business capacity, industry, patience, endurance, and frugality of the Chinese."

"The laws of California declare that the Chinese are Indians and aliens, and her legislators have treated them as if they had no rights which they were bound to respect."

* * * * * * *

"I think they cannot be protected in the United States while remaining in their alien condition. * * * * * *

"Complete protection can be given them only by allowing them to become citizens and voters. Refusal to allow a Chinaman to land, who had embarked at a British port (Hong Kong) on a British vessel, would be a question with the British Government and not with the Chinese."

No Chinese ship ever crossed the ocean or brought a single Chinaman.

Chinese don't come here on the Burlingame or other treaty, but under protection guaranteed by the Constitution of our land to all who enter its borders.

Destroy all the treaties, and it would not touch voluntary emigration from China.

Captain Gill, of the Royal Engineers, in a recent narration of a journey through China, writes as follows of an agreement between himself and a coolie master.

"But, unlike English documents, this charter once drawn up and verbally agreed to by the coolie master and myself, required neither witness nor signature, but, being coolied to the depths of my pockets, was as valid according to Chinese usage as the most formal document that ever issued from Lincoln's Inn. This confidence that people have in one another is a feature in the character of the people that has been strangely unnoticed by foreign writers. Merchants in China rely implicitly on one another; indeed, if they did not, all business would come to an end at once. In my position, I was over and over again compelled to trust the Chinese with large sums of money without receiving any receipt, and in other ways to rely on their probity to a far greater extent than I should have trusted Europeans, or Chinese if I could have avoided it. But I was never deceived in the smallest degree, nor did I lose anything all the time I was travelling."

In California, the Chinaman is represented as "deceitful above all things and desperately wicked." But in a few cases comes to America. Negotiation that shall bring a better class is a great desideratum. The better class is comparatively well off at home and has slight reason for a change and deep inherited ideas against it. In all nations life the best element is kept at home by a centripetal influence; the worst feels a centrifugal force. Only like other nations sends abroad those she can best spare. The fear of an "invasion," however, seems groundless.

The foregoing is information at second hand. I have had my own point of contact with the Chinese.

In 1855, my father obtained a coolie from a cargo that arrived at Honolulu. Hawaiian cooks (always men) were untidy, indolent, and given to loose distinctions of *meum* and *tuum*.

Akio was over forty years of age, awkward at first, untidy, shovelled his rice down his throat with chop sticks, drank tea direct from the pot, and evidently despised our race. Obliged to attend family prayers, he sat it through with a contemptuous grin; considering our sacred songs infinitely inferior to the hideous squeal of Chinese music.

We tried another. *Akau* has been with the family over twenty-five years; is faithful; does each day's work with exact uniformity; steals half the eggs; we could depend on the other half; is off, on most Chinaman cooks there are, a few hours each day, to look after the restaurant in which he is a partner. He is punctual, kind-hearted, but a trifle independent, for labor is very scarce, and he could at any time to the last twenty years have got higher wages by leaving us. When he was sick in hospital, years ago, my mother used to visit him. He was grateful, never forgot it, and although he often tries her patience, yet, when she is ailing, and kept in doors, he is most kind and dutiful. Akau is a mixture of good and bad; an average Chinaman, far from the best. He fed my riding horse all summer, and could be depended on for such things.

He gambles terribly, makes sponge cake on the sly for his worthless gods, and helps his aged parents in China.

Chinese are the cooks, and largely the laborers of the Hawaiian Islands. There are about eight thousand of them, (only three hundred women,) one for each male adult of the entire native population. They create a sad disproportion of the sexes (three men to two women) which threatens morals and civilization.

The housekeeper everywhere is the Chinaman's friend, for he is an unspeakable boon in this age of "Servantgalism." What a chorus of thanksgiving for Chinese labor from the women of this State we would hear were it called for.

More than one resident at the Hawaiian Islands said to me, "I have a Chinaman; my house is kept by a gentleman; my wife hardly ever enters the kitchen. John does the marketing cooking and all; only asks a few questions each day." Many trust these Chinese servants with everything. Californians say they never take one without a bond as security from stealing, as all are thieves.

Our Island Chinese are on average lot; perhaps ten per cent. are rascals, and are doing great harm, but the great majority work for a living.

The extensive Hawaiian sugar interests depend very much on Chinese labor. Different planters give different accounts of it. Some say they are the best hands. Everything is in management. You must watch their accounts, know everything, and *be just*. Then all is right. "Firmness and fairness" is the formula for dealing with all the races.

I saw hundreds of Chinamen at work, as I rode over the group, and made many inquiries. The knock-down method of dealing with them is passed away. They know their rights, go to law and get justice from Hawaiian courts. Chinese witnesses there are sworn over a rooster, whose head is cut off in their presence.

The Chinaman is more manly as he is treated more like a man. There is a set of high-minded Chinese merchants in Honolulu, whose characters are above reproach, who live in the best style, and educate their children; their wives being educated native girls.

On the other hand, a low set is peddling rum and opium among the natives, debasing the lil

LETTERS FROM HAMPTON GRADUATES.

INDUCING THE PEOPLE TO BUY HOUSES. FARMER AND TEACHER, AND SUNDAY SCHOOL WORKER. A GROUP OF GRADUATE TEACHERS. HUNGRY FOR BOOKS AND PAPERS. STARTING A SABBATH SCHOOL. ANOTHER GROUP. FROM A MEDICAL STUDENT. KEEPING STORE AND STUDYING. THE CRY OF THE CHILDREN.

A young colored man can not do a better work for his people than to persuade them, by argument and example, to secure houses for themselves, and improve them. Such workers are needed by hundreds in the South to lead their people into prosperity and a position which will secure respect. To do this work more is needed than book learning. The teacher who is a practical farmer or mechanic, has an immense advantage over one who can teach only from books.

N. C. *Aug.* 1880.

Gen. Armstrong, my Dear Teacher:

I am happy to inform you that I have been successful enough to bargain for a piece of land for myself; about 20 acres. It will be a neat little farm, if I am ever successful enough to pay for it. You know I wrote to you for information about the colored people going west. I told them what you said about going west; why it was cheaper for them to stay where they were, and get themselves homes. And ever since, I have been busily engaged in talking to them and trying to get them to get themselves little comfortable homes. I have been working on the white people here and trying to get them to cut up their large farms into small ones, so that the colored people could pay for them more readily, and would not have to work so long before they have a home of their own. So I took it on myself this year to interest the colored people about having homes of their own. So I went to a lawyer who owns several acres of land, and asked him if he would not cut up his land into small farms, so that the colored people could buy themselves homes. He very readily agreed to do it, so I have been successful enough to get 4 colored families to buy homes of this man, so that the young colored people will have to become independent by being smart and saving. I myself have a small cotton farm, looking very well. It would have been better if it had not been so wet. I am farming and teaching too; so you see it keeps me very busy. My school I am teaching now is in very fine one, having on roll 55 pupils, some high enough to enter the Junior class and some the Middle class, but their parents are too poor to send them away from home to school, so you see I am going ahead with this good work, God helping me. I also have a fine Sunday School too; all I lack now is clothes and books for my dear little ones. I heartily thank you for the Educational Journal, it helps me on with my work, and so does the Southern Workman; it is a very interesting paper for the colored people. I read of your travels this vacation; I hope you had a pleasant time; it seemed that you were having a good time at your old home.

I will close my long letter, hoping that it wont tire you.

Yours truly, P.

A GROUP OF GRADUATE TEACHERS.

"HUNGRY FOR BOOKS AND PAPERS."

A group of Hampton graduates teaching within eight miles of each other in one county of Virginia, send cheery reports of their work, though they find ignorance and poverty, and deprivation of many of the privileges of civilization. One is starting a Sunday school where the only Sunday service has been preaching once a month. Like many others, she is hungry for books and papers.

——Va., *November* 5, 1880.

Mr. B——,

Dear Friend:—

I cannot feel grateful enough to you for your kindness in sending me so many nice papers. They are very interesting indeed. Please accept my sincere thanks also for the map. It is a great help to the school. The children are very much pleased with it; they never had one so nice before.

I suppose you know that S——, and I were classmates at dear old Hampton, and that we both left there the same year, 1878. In the fall of that year I came here to teach, in a place where there had never been a school. I found the people friendly, and anxious to have a school, but no house to teach in; after a hard struggle of two months, the men succeeded in raising a log house, with a large open fire-place, and a few rough benches without backs. This they gave me as my school house, I had to work hard to get a black board, which I partly made myself.

This year the school Board has given me a stove, for which I am very thankful. I do the best I can with what I have.

I've been teaching here fifteen months. I started with the children from the beginning; the most of them can write a legible hand and are doing well in Arithmetic and other studies. I have had my whole soul in the work, and feel that my labor is not in vain, though sometimes I see so much to do, that I feel that I have done very little, and that all I can do will not be much.

After seeing the need of good workers here, I sent for my school-mate at Hampton, to help me. She came and taught near me last year, and all seemed well pleased with our work.

While attending the Lynchburg Normal Institute last summer I met S—— and D.——, and asked them to come with me; they were willing and when we were ready to leave Mr. M——, made up his mind to join us, so we are now five.

I do hope that our people may be blessed by our work and example here, and that next year we may be five more.

We want to hold a teachers Institute soon, when we will discuss the best methods of teaching.

My Sunday school is still going on, and the children seem interested. I am thankful to say that many of them have given their young hearts to the Savior,

Hoping that God may bless your life in many ways, and that you will write soon,

I remain yours gratefully, A.

Nelson Co. Va., *Oct.* 13, 1880.

Kind Friend:—

It was indeed a pleasant surprise to receive a letter from you. I will try to tell you about my school; I have thirty-five scholars on roll, which is about half of the number who still have to come after the crops are gathered. The larger girls and boys have to do a large part of this work, so they can't begin to come until the middle of next month. My school house is a large log house and I think it can be made very comfortable for the children, if I can get some of the patrons to daub the cracks. They have promised to fix it up before cold weather comes. I have a nice boarding place, I like the place because it is near my school; it is in sight of the school house. The people are very kind to me and are very anxious to have their children learn, but a great many are too poor to send them. This is very pretty country, with mountains on all sides, which are made beautiful with many different colored autumn leaves. The most of the people are quite ignorant, showing that there is hard work for us. They have church service once a month, and no sabbath school, I shall start one next Sunday. The superintendent sends us to these schools, where they have'nt sufficient books, no maps or reading charts. He says they are not able to give us the things that are needed for our school. I found a good many of the children with nothing but the old time blue back spelling book, with "ba, be" such as was used a hundred years ago. A. T——, teaches at Hat Creek, about five miles from me; this is the fourth term she has taught at that place, and she has done a very good work: she teaches a sabbath school, and has organized a temperance society. One of my classmates teaches three miles from me; this is the second term she has taught there. I had a letter from S——, the same day I received yours, she is getting along real nicely; her school is eight miles from mine. We are about fifteen miles from A——, the nearest station. Please accept many thanks for the papers, for I am always *hungry* for books or papers. Those are the first I have had this fall, so you can imagine how eagerly I read them; our mail only comes three times a week, Tuesdays, Thursdays and Saturdays. Can you tell me where Miss Harrold is? I wrote her two letters, but can't hear from her. She used to write to you, so I thought you might know where she is now. It is warm and pleasant here yet; many of the farmers are sowing wheat, to be sure of this fine weather. This is a great tobacco country; every one is busy cutting it now, getting ready for market. It is a pleasant sight to see, rather than to smell.

Teaching has become a pleasure to me instead of being irksome. When I look at the condition of my people, and see how they are deluded, it sets every thought and nerve in motion to study how I can help them.

Yours respectfully, D.

ANOTHER GROUP.

The Summer and winter experience of an energetic Hampton graduate, not afraid of work, and anxious to help his people, is well set forth in the following pleasant letter, which gives a report from several such.

——Va.

Miss I.——, Dear Teacher:

I promised to write you more frequently. Beg pardon for this delay, promising to do better hereafter. When I left Hampton in the spring, I went immediately or directly through to New York, and went to work the same day.

The first of June I left New York and went to Bay Shore L. I., in company with seven other Hampton students. Here we stayed two months. Had an excellent time.

At the end of these two months we emigrated for Saratoga; reached there on 5th of Aug., went to work on the morning of 6th, the same, in the great "Grand Union," where we met two more Hampton students, in the same house, but met a great many others in other houses.

I was very lucky and made a good season.

From here I went home and spent a month with my people. The gentleman that helped me in school, gave me a History of the English people, and some other books, requesting me to read and study, also gave me the New York Weekly Tribune for one year.

When I left for the South I came via Hampton, and stopped a day.

I commenced my school on the first Monday in Oct.; have my same school and am progressing fairly. My school numbers 40. I have taught a month and sent in my report. Daily attendance 34. I think I am a better teacher than I was last year. I feel that I am more of a master of my work.

Miss I.——, I think if my body should be good, I should. People are good to me.

I am trying yet to be a good boy. I commenced to study my Bible and Bible Dictionary.

I must tell you something of Sabbath School. Opened last Sabbath with 21 pupils; am doing all the work this year, my assistant is gone, but I think I will get along nicely.

To-day we had the 8th chapter of Matthew. We learned who the Scribes, Centurion and Peter were. Also what the palsy was, and the leprosy. How it came and all about it. To make it short we use our Bible Dictionary and are all learning something.

I want to say more, but must stop here. I am yours truly, B.

A MEDICAL STUDENT.

The object of Hampton is to train teachers, and less than ten per cent of its graduates have failed to devote themselves to teaching. Here is one, who, while acknowledging his responsibility to the school and to his people, is trying hard to gain a medical education, and we hope he may succeed.

The medical profession should be the next practicable and useful one for the educated colored man. Good physicians scattered through the South would make a difference in the next census returns of the colored population. The trouble is that the people do not give their confidence to one of their own color except to the "Conjure-doctor." The colored physician will find himself reduced to living on his own drugs unless he has something outside his practice to fall back upon. If he can support himself by farming or some other honest occupation, and practice as he has opportunity, for the love of it, he may do good. A teacher who could add a knowledge of medicine and hygiene to his equipment would double his powers of usefulness, as some white missionaries have done. Every teacher indeed ought to have some knowledge of the laws of health, and spread it among the people.

MEDICAL COLLEGE,——N. Y., *Oct.* 10 1880.

Dear General:

As I make it a point to report from time to time of what I am doing, I am pleased to tell you that I have been matriculated in the long wished and worked for place, a Medical College. I worked hard and steadily all summer, was economical, being able to save nearly as much this year as I did last, though I did not work quite a along. September 20, I started for this place, and as I purpose getting along in the cheapest possible way, I have made arrangements like this. I have hired me a room in the top story of a large business block, for which I pay $3,00 per month, have purchased a few articles of furniture, just enough for ordinary comfort, a stove, cot-bed, chair &c., and have agreed to wait on table an hour during each meal, at a hotel, for which I have my own board. It is so arranged that my hour of work will not interfere very much with my lectures; if it should, I would only have to study the harder to make it up, for one who is poor must always expect to make some sacrifice. In this way, I am in hopes of getting through very much cheaper, as board would cost from $4 to $5 per month. Had I not made the arrangements I have, I should have hoarded myself, doing my own cooking, &c.

I am very thankful to the Supreme One, that after two years struggle I have been able to make one more step in this direction. The course in this College is n 3 years graded course. I am going to make what little I have saved take me through the two first years, if possible. Tuition and books being $125 per year, besides a few other expenses, as chemical, dissecting and hospital fees $20, I will take the remaining year as soon as I can accumulate the means to do so. The Medical Class visited the city hospital Friday to witness an operation, and attend a clinical lecture.

After I am more settled I will tell you how I succeed in my studies.

Hoping to hear from you when convenient,

I am yours obediently. D.

THE CRY OF THE CHILDREN.

One of last year's graduates writes thus pathetically of the needs of the little ones in his school.

——Va., *Oct.* 20, 1880.

Miss D.—

I am glad to write you a short letter in regard to my school.

I began on the 18th inst. with only six poor little boys, and up to this time my school has only increased one. It is very discouraging to one indeed, but I am trying to be of a good cheer. The children a good many of them are both shoeless and nearly clotheless. It makes me tremble to see the children in such an uncomfortable fix.

The people are very poor, on an average. I have visited some of them and they seem anxious to send their children, but are unable to send them as they want to send them. I tell them that it is better for them to send them as they are, than not to send them at all. I say it is better for them to be educated in rags than to be ignorant in rags.

I have visited some of the log cabins which are comfortably plastered between the cracks with mud. Some have no windows; others a small hole cut in the side or end; in this small room, without ventilation, six or eight persons sleep. If there is any way Miss D——, that you can obtain any thing that you can send me, such as clothes, or instruct me how to get a few things, I shall be glad.

I am eight or ten miles from the post office, therefore I have to send letters by chance, often. I have to walk three miles to get to my school. Saturday I walked twenty-two miles, and I was very tired after my exercise. I am anxious to see the teachers and scholars again.

I will be happy to hear from you soon.

From your scholar, K.

THE NAVAL REVIEW.

A VISIT FROM THE PRESIDENT.

A Naval Review more brilliant than that of last year, in every thing but the weather, took place Nov. 10th, in Hampton Roads. Thirteen ships of the North Atlantic Squadron, including the training ships Minnesota, Constitution, Portsmouth, and Saratoga, were reviewed by President Hayes, the Secretary of the Navy, and Secretaries Evarts and Schurz. Mrs. Hayes, and several other ladies were also of the party, and the fortunate prize-scholars among the boys, were happy in receiving their medals and a kind congratulation from Mrs. Hayes herself. A salute of twenty one torpedoes exploded under water, in quick succession, throwing their fountains mast high, was a novel feature of the display. The muster of the marines and boys, on the beach, forming a line 2000 long, and their review inside Fortress Monroe, was very fine. The next day, the President and his party visited the Normal School, and the President addressed a few kind words to the assembled scholars, saying, "I am glad to be here again, and to see the progress you are making. To all of you, boys and girls, I wish all success and prosperity and bid you good bye." All turned out on the green to see the President off, and followed the departing boat with long and hearty cheers.

The Rev. Dr. Penniek, who was happily settled over a charge in Virginia, was some time ago consecrated a Bishop of the Protestant Episcopal Church for Liberia, Africa, where he is now not only faithfully performing religious services, but also working with his own hands in cutting timber, and doing other things for the building necessities of the mission.

INCIDENTS OF INDIAN LIFE AT HAMPTON

All at home and at their studies. The fifteenth of October brought the Indian boys and girls back, who spent their vacation in Massachusetts, and a happy set they were. Just the papers each one cut, or the many ways that they found to show their joy at being at home again would be hard to describe. They expressed it in Indian, in English and by signs. One little fellow spoke for all, when he said; "I glad to go and glad to come." It took them several days to get cooled down. The warmth with which they remember and greet their friends is one cheerful sign for the future.

Compare this arrival with their arrival here two years ago. How different their dress, their walk, their language, their thoughts, their actions, their intentions—how different their ideas of the white man; and how different also are the ideas of the white man, with whom they have come in contact, toward them. Will another two years produce as great a change in as many more Indians? We hopeso. Will another two years cause as many whites to change their minds in regard to the Indian? (We believe the ledien will make still more change.) Surely if the *Indian* can be converted from his wrong ideas, the white man ought to be from his. If the white man changes his mind he can change the Indian. If the Indian continues to change his mind, he will change the white man's. The future will tell which will have the honor of changing the other.

Wherever the Indians went in the North, they made favorable impressions. Their employers say they gave satisfaction in their work. The Indians got many ideas of the white man's civilization, which they will never forget. Many warm friendships were formed between employer and employee, as the many letters since exchanged, testify. These youths will teach their people, on their return, that the white man is not their sworn enemy.

The improvement made in English was very marked. One had so improved, that when asked what language he spoke, replied, "I speak English."

A DAY IN THE COUNTRY.

After five days of study and work, it is thought a good plan for their health, to let them spend Saturdays in the country. The Indians, accustomed all their lives to the open air, the chase, the war dance, athletic sports and a free and easy life in general, can not be cut off from all this too abruptly, without serious injury to their health. The boys made their first excursion, for this term, a few Saturdays ago, about eleven o'clock, arriving at a suitable place for pitching tent—a long, beautiful beach on the Chesapeake Bay.—dinner was hastily cooked, the dinner call sounded, and, in a moment every man was at his post, ready for duty. Appetites were good, and they ate till—till there was no more. The boys make excellent cooks, and need little teaching in getting out-door dinner. They engaged in all kinds of games: "prisoners' base" "leap frog," ball, jumping and racing, till all were tired and glad to start for home. Some of the older boys tried to start a war-dance but had some trouble in making it go, most of them being inclined to get above that sort of amusement now. Some, when asked to join, replied, "I no know how now, used to know, but forgot," others would say "war-dance no good." One was finally started, the boys were very shy about it, and it lacked much of the spirit and earnestness that usually characterize such performances. The boys have bought themselves a foot-ball, which will add much to the enjoyment of the next trip. The girls spent the next Saturday in the country, and enjoyed themselves as well as the boys.

STUDY HOUR.

To attend study hour like the colored students, and have a big pile of school books, has been one of the great desires of the Indians. This they have not been permitted to do heretofore, to any great extent, as most of their teaching has been by objects.

When the night for the first study hour came, it was quite amusing to see all crowding to the room with arms full of books, of all sizes and descriptions.

As their eyes begin to get opened they begin to realize that they are being treated as little children, both as to studies and discipline, and from this comes their desire to be placed on a footing with others as soon as possible.

It will take some time still to teach them how to use their text books to good advantage.

TRYING TO IMPROVE AFFAIRS AT THEIR HOMES.

The following piece of sensible advice, written by a Shawnee boy twenty years of age, in the Middle Class here, to his tribe, is an indication of what some at least of the Indians will try to do for their people, when they return home. He was elected one of the chiefs of his tribe just before coming here.

It was by accident that I saw this letter before it was mailed, and it is fair to presume that others containing the same kind of advice have been sent. The following is an exact copy:

NORMAL School, HAMPTON VA. *Oct* 27. 1880.

To the Chiefs. Headmen and others of Shawnee Nation, Shawnee Town I. T.

Sirs:—I heard some way that stealing and introduction of liquor into the Territory are still going on more or less; and that you are trying to anticipate it by making laws and regulations as a protection for our good citizens at Shawnee Town.

If such is the case you are doing right.

I am going to say a few words to our fellow men, which I hope will encourage you also in that matter above named; but you must not expect to hear a grand *you're talk* from me for I am but a youth yet, and not able. I am going to say that we all know that stealing, drinking and gambling are wrong. When a man begins to practice in these things at the same time he begins to go down until he finds himself at the bottom of a pit-fall where no man is able to pull him out; every one despises him: every one's eye is upon him; therefore in order to avoid these mean low ways of life, we must encourage our fellow men to labor. We know that it is the only way to get along, and that the red men would have to do like white men; that is, to go to work and raise such things we shall live upon, and raise our families; raise corn, wheat and stock, &c. Give our children up to be educated in this way, that when they should grow up to be men and women, they would be respected by good white people, and become wise and good. I myself saw the evils of gambling, stealing and drinking, and those who have left off these bad ways, among our people, are now doing well. They not only have plenty to do them now for the present, but they look forward to be provided with plenty to sustain them in their old age, when they are unable longer to labor, and therefore, they work hard now. My dear friends, this is the course we had better all pursue in future, and then the white people would look upon us as they do on their own people, and respect us; but as it is, they do not, for they look up on the thief and drunkard with a scornful eye, and up on him who breaks his promise with contempt, and hate him.

My friends, it is now high time that we should try and do something for ourselves. I mean in this, that we should frame such laws and regulations as to protect our good citizens, and not allow those who do not work to impose on us. When I use to go to school there in Shawnee Mission, strangers often visited the Mission, and these people would ask me what kind of laws the Shawanees had—the answer was, none; they would ask if they had any chiefs, and what was their head chiefs, the answer was, that they had, and that John Esparum was their head chief.

The reply generally was—"Well he is a good chief." Now you may say you have chief, I ask you what we have chiefs for? I, for my part, do not know. I will try and explain. We have chiefs to do the nation's business. You have sent them to work for you, but you never give them anything to work with. You might as well send them to the field to hoe your corn without hoes. Suppose you were to do that, how could you expect them to hoe your corn? But still you would turn around and grumble at them for not doing your work. Just so now, are our chiefs situated; we ask them to attend to our business, and have given them no authority to do it, and we have turned on them and complained because our business is not attended to, and because we do not stop this bad way, we are not getting along. If one man owes an other anything and won't pay him, how is the creditor to get his money? One may say to him, go to the chiefs and they will assist you.

Now let me ask you, what power have the chiefs to do anything for him. I answer none at all. This is just like sending out to work and nothing to work with. Now, let us make laws and give our chiefs some authority to work, and they can work; they will make a good thing for the nation.

I hope they will all agree (if they not agreed already) to go to work and make laws for our government, and authorize the chiefs to put these laws in force, so all of us may be protected in possession of our property and in our person. This is my wish, but of course, is nothing more in my part than a wish.

I am, sirs, yours respectfully.

Thomas J. Wildcat.

EDITING AND PRINTING.

The readers of the "WORKMAN" will be interested to know that the matter contained in the Indian Column of the page called the Hamptou Students' Own is gotten up exclusively by the Indians. Most of the writing is done by a Pawnee boy, who also sets the type for their column. He takes a great deal of interest in it. He has a friend at Carlisle learning the same trade, both are trying to make all the progress they can, so

THE GREAT WALL OF CHINA.

that they can carry on the business together when they return home. At present, we have only two boys working in the printing office; there are others who want to learn the trade, but the confinement is not thought good for their health.

PREPARING FOR HOME.

As the Indians begin to realize that their stay here is now very short, they take hold of their studies and work with more interest.

Once it was a task to get them to go to work promptly; now they give almost no trouble, many going to work before the time. Saturday is given to them as a holiday, but some prefer to spend a good part of it in improving themselves in their trades.

The following application will speak for itself:

INDIAN COTTAGE, *Oct.* 30, 1880.

GEN. ARMSTRONG:—as I told James Murrie that I want to work all the time, that is to work every day except Sundays, and go to night-school as I am advanced in Primary books, I want to learn how to be a good farmer like Mr. Cook, so when I go home I can just go right ahead and work on a place which I will pick out for myself, and also teach my people how to be farmers, and besides, I want to be with the colored boys and talk with them in English, to go to school with them; this way I think I can learn fast, both in books and work.

JONATHAN HEUSTICE.

Another one, who returned to his Dakota home last summer, has the following account given of him, by a white lady, in a card to an officer of the school:

FORT BENTHOLD, *Oct.* 20, 1880.

Lieutenant R——, I was lately enquiring about Mr. White Bear. He has arrived here and we are all delighted with his great improvement. He is working to day and seems to desire to be a *man.*"

I have just heard of a resolution that the boys made while on their way from Massachusetts, to the effect that they were going to try to obey every school law this term, and make all the progress possible in every thing. So far they seem to be holding out well; for the transgressions have been few. B. T. W.

THE GREAT WALL OF CHINA.

The longest and strongest wall ever built by man is the great wall of China. Two hundred and twenty-five years before Christ, the Chinese Empire having been much troubled by invasions of the Tartars, a war-like people who lived in the country north of China, a Chinese emperor formed the great idea of stretching a mighty wall across the whole northern boundary, defended by strong towers, where watchmen and soldiers could be constantly on guard. This great idea was carried out, and so thoroughly was the work done that, two thousand years after its completion, the great wall still stands almost entire, though no longer guarded, or useful as a defense against the weapons of modern warfare, as it was in the days of arrows and spears. It is still, however, one of the wonders of the world. It is fifteen hundred miles long, from fifteen to thirty feet high, and so thick that six horsemen can easily ride abreast upon it. Its towers rise only two bowshots apart, so that no enemy could pass between them out of range of one or another. It is said there are forty-five thousand of these towers along the wall, which stretches through the country, across the plains and valleys, and over hills and mountains, one of which is over a thousand feet high; across rivers, which flow through its arches; and ending at last in impassible mountains and sandy deserts. The foundation is of large stones laid in mortar, but the wall above that is brick. The top is flat and paved with hewn stone, and where it passes over a rock or up a hillside, it is laid in easy steps.

Chinese history relates that this enormous wall was finished in five years, so many workmen were employed upon it. They stood so close for many miles that they could hand the materials from one to another. Some such arrangement was necessary, as no clay for bricks or cement is found among the rough rocks through which it passes, and no wagons or carts of any kind could have been used there.

The great wall seems, both in its strength and its decay, a symbol of the exclusive spirit of the Chinese nature and policy, which for so many centuries has walled China in from the outside world. As this exclusiveness is gradually yielding, like the great wall, to the changes of time, let us hope that its fall may let in upon the Celestial empire not the hordes of evil, but the light and blessing of Christian civilization.

LYDIA MARIA CHILD.

October 10, 1880.

"DEAR SIR: Since writing to you, one

devote his whole time to his own advancement instead of the salvation of his people?

THE CHINESE AT HOME AND ABROAD.

A propos to the editoral article upon the Chi-

LYDIA MARIA CHILD.

Another hand tried friend of freedom and humanity has passed from earth. Mrs. Lydia Maria Child should be forever cherished in the memory of each member of the colored race whose champion she was in the days when abolitionism meant rare courage and self-forgetfulness, and even before abolitionism was thought of as a party issue. She was the author of the first work ever printed in book form in behalf of the slaves, in this country. It was called "An Appeal for that class of Americans called Africans," and was published in 1833. This and several other works which followed it, "The Oasis" an annual, "Anti Slavery Catechism," and "the Evils and Cure of Slavery" preceded and helped lead to the anti slavery movement. From 1841 to 1840 she was joint editor with her husband, of the Anti-Slavery standard.

They lived at this time, and for many years, with the Quaker philanthropist, Friend Isaac T. Hopper, who was a kindred spirit in his unselfish and ardent devotion to the cause of all the oppressed and abused, whether man or animals. The year before the war, her name came prominently before the public by her correspondence with Governor Wise, of Virginia, in regard to her desire to nurse John Brown after his capture and imprisonment. Her interest in the colored people did not cease with their emancipation. She appreciated the magnitude of the work still before them, and was deeply concerned in every effort for their advancement. Her large and loving nature took into its sympathies not one race only but was thrilled by the wrongs of the Indian as well as by those of the slave. She gave them not only her public influence, but her personal consideration, and some of both the colored and the Indian students at Hampton have letters which she took the time and pains to write with her own hand, full of encouragement and suggestion, and henceforth to be doubly prized. She was a warm friend of the school, though advanced age had prevented her from visiting it.

Beside her anti slavery writings, Mrs. Child published many books on various subjects, essays, biographies, history, and romance. She was a woman of fine cultivation and social power. Her home in New York City was the centre of a circle of distinguished artists and literary men and women, as well as of philanthropists. The latter years of her life, since her husband's death, were spent in the village of Wayland in Massachusetts, her native state, where, full of good works to the last, she died very suddenly of rheumatism of the heart, at the age of seventy eight.

A private letter received at Hampton from a personal friends, says that she had been suffering from rheumatism, and had said but a few days before her death, "It would be pleasant to slip away quietly out of life now, and not have to dread the coming cold weather and the pain it might bring." Her wish was granted. At her funeral, her life long friend, Wendell Phillips, after a heartfelt and tender review of her life, read one of Mrs. Browning's lovely poems, "He giveth His beloved sleep."

Among various bequests in consequence in Mrs. Child's will, is one of $2,000 to Hampton Institute. Whatever distribution she has made of her money has surely been in accordance with the principles of alife spent in sweet and noble service.

THE CALL FOR COLORED TEACHERS IN VIRGINIA.

A few specimens of the applications for graduate teachers received at Hampton Institute in October and November, this year, will furnish the best possible evidence as to the desire in Virginia for colored schools and colored teachers.

For some years past, the financial embarrassment of the State has made salaries uncertain and sessions short, and last year, for the first time, there were not enough schools open to go round among the graduates, so that several of the class who desired to teach were unable to. This year, however, with a larger number of graduates in the field teaching than ever before, the number of applications which Hampton is unable to fill, is just about as great as it was six years ago. To all of the following, and to some others, the reply has has been unwillingly returned, "No more teachers to send."

"Office County Supt. of Schools,
——Virginia, *October* 20, 1880.

GEN. ARMSTRONG;

Dear Sir: We need two or three colored teachers in our County. Can you send me three (males or females)? Salary from $20 to $30, according to grade of certificate. Please reply to this at your earliest convenience, and oblige.

Yours truly, M——.
County Supt. Schools, Bedford Co. Va.

"Bowling Green, Va.

Wanted; a 'Teacher' to take charge of a Public School at Woodford, Caroline Co. Va. Only a week to wait." A. G.

October 16, 1880.

"*Dear Sir:* Since writing to you, one of the schools has gotten Mr. M. [a Hampton graduate] as teacher, and just now we only need one teacher. Wages will be about $20, according to certificate. The school will commence as soon as he can get here.

Yours truly,
——Supt. Schools, King Williams Co.

Matthews Co., Va., *October* 22, 1880.

"We can give $20. per month, session five months, school to commence November. Teacher can board very near the school house. We want a female teacher for two schools. Please let me hear from you as soon as we can, as we want to commence the school in November."

Orange C. H., *November* 4.

Dear Sir: Please send the female teacher you wrote about if you can recommend her as fit to take the management of a school. I can also find a situation for a competent male teacher.

Respectfully yours,
J. P. T.

Several graduates already teaching write as follows:

Staunton, Va.

Dear Miss M. Your card just received, sorry M. B. will not come. Mr. G. the Supt. wants three or four teachers if he can get them. Should you get some good teachers within ten days, please send them. I heard that M. S. was in H——burg, and sent her a card asking her to come.

Yours,
J. W. D.

"Scottsville Va. *Nov.* 2.

Albermarle Co. *Nov.* 2.

Miss M. I. has begun to teach his school. Is there not another graduate who would like a school in this county, $30 per month, five months session, prompt pay? Say by return mail, please, so that I may prepare one for her, or her.

R. K."

Charlotte Co. Va. *October* 28.

Dear General: We have a school in this county anxiously desiring a teacher, and would be very glad if you could send us one. We are paying from $15 to $40 per month. Should you send us a teacher at once we should be under many obligations to you.

G. Y. R."

Another graduate teacher sends an appeal he has received, as follows.

King & Queen C. H. *Nov.* 13, 1880.

Dear H: I write this to try and get you to get us a teacher to the school at P. Church. We have builded a school house and can't get a teacher; $20 is the sum the Board offers. We will take either a woman or a man, either you can get. Of course she or he will have to pay board, but I reckon that will be moderate. Try and get a teacher if you can possibly do so.

Your affectionate cousin,
W. H."

"*My dear teacher:* The above came to me a day or two ago. If you send a teacher, it will be highly appreciated. *It is one of those places where my race is starving for knowledge.*

The pay is small, but it is sure and may be increased by the people. I know of no one else to apply to but you.

Yours sincerely,
H. Y. S.

That the hunger and thirst for education has not all died out in even the old people, who desire it for their children if they cannot have it themselves, the following letter pathetically shows.

"Cabin Point, ——Co. Va, *Oct.* 20. 1880.

Dear Sir: I sets myself to write a few lines, to ask you to get us a teacher if you plaze, and send him up here as sune is you can; if you can do so, we will be very glad. A young man, by the name of S. one that went to chool to you inform me to you, and [said] you could geet us one, if you can geat us one send us word what day he will come and we will meet him at the boat, the chool that we want to have taught is a public chool and the pay is twenty five ($25) doll. one meant, we want you [him] to come right way; send him sune is you can. I have no more to say Good buy.

I am your freind,
N.
Write suoe and let me herr from you."

Advertisements for colored teachers appear also in the Virginia Educational Journal, and those who are teaching are spoken of with kind appreciation and encouragement.

In view of the urgency of the calls, and the greatness of the need, every Colored Normal School graduate ought to seriously consider his duty to his race for whose sake he professes to have educated himself, or has been helped to an education. There is a white open door, and none to enter it. Has he a right to devote his whole time to his own advancement instead of the salvation of his people?

The graduates of Hampton have, almost without exception, answered this question in a manly and missionary spirit.

EAGLES AND BUZZARDS.

It is a popular theory (how absolutely true it may be, I do not know) that the eagle prefers living creatures for its prey; while the buzzard has strong predilections for carrion.

The striking similarity between men of different kinds, and the different kinds of lower animals has often attracted attention. Looking at mankind in general, and at the men of the United States in particular, are we not able to find among them fair types of the eagle and the buzzard, as these birds are popularly regarded?

We find the prototype of the buzzard in those people who hurry on all issues,—on questions settled, and which should be in the deep lesson of oblivion buried. This class, however, is by no means a small one; we find them in all departments of life—and popular slang has dubbed them "Old Fogies." To hear discussions based on how things were "before the war," or some other indefinite period is just about as interesting to most hearers, as speculation as to how things looked before the flood.

The age we live in, is one of express trains and telegraphs, and people living abreast of the age, have no time to discuss receipted bills, not on-lawed accounts. Nevertheless, there are many people whose lives seem spent in rehashing over what was, with no particular interest to manifest in what is, and still less, in what is to be. Such people are drawbacks to any community, and likening them to buzzards, but serves "to point a moral and adorn a tale."

Chickens and geese may grow fat by standing still; but countries never do: and when a land as to "Old times" rises, we may be sure that the one waiting, prefers stage coaches to railways, and schooner travel to steamboats. Buzzards cannot help being buzzards, and their human prototypes perhaps cannot help being what they are. Still it would be a dreadfully oppressive idea, if we had to accept the theory, that no man was able to change or be changed. Progress means upsets—a new house cannot be built where an old one stood except the old one be pulled down, and no new lines of thought and action are possible while we are hampered with moribeed traditions.

The live men of a community, like the eagles, prefer live food, and in their business go about it as it is, and not as it used to be. A man anxious for merchandise from London does not write a letter and send it by a sailing vessel, but "cables" for what he needs to be sent by steamer.

The buzzard part of every community are fond of quoting the fable of the hare and tortoise, and seem to think the virtues of the tortoise were summed up in his being slow—this for such blind readers of fable: the tortoise won because he kept moving, while the hare lost, on account of an extremely conservative nap. Perhaps the hare's ancestors had for generations taken naps at the time when the hare went to sleep.

There is so little in the world that is absolutely true, that if we clutch a mass of doctrins or dogmas, or theories of any sort, and gorge ourselves with them just because they are old, we are very apt to find we get more dyspepsia than strength. Any man who holds to a theory, that will not bear ventilation and discussion had better drop it: for it is as bad as a coat that will not bear brushing. A theory with all the nap off had better go in the rag-bag with other discarded mental garments.

If the census of 1880 show anything, it will show how the eagle idea has gone ahead of the buzzard theory. Cities pierced through and through with rail roads, wild lands turned by the plow, factories blazing far into the night, and vessels begging their turn to discharge cargoes at the dock, are all signs of the eagle. Trails instead of roads, worn out fields instead of farms, general stores instead of warehouses of specialities are all signs of the buzzard. Accurately and metaphorically the United States is the home for the eagle—climate, soil and food are all in his favor—indeed if the tide of immigration be a sign—no country presents an favorable conditions. A glance at the table of immigration is instructive, as we find the live workers from Europe almost universally go where the eagle, not the buzzard, is. Why is this? Because, with all their conservatism, they prefer going and taking their labor, where people are in the present, and not in the past; where "is," not "used to be," is the motto.

To utterly overlook the past—to reject its lessons and forget its teachings, would be absurd—as a guide to the future, the past has a place; but it is a means not an end. A whistling buoy may mark where a ship went down, and it is our business to avoid the shoal, and not wreck ourselves, because another had there been wrecked, or because the buoy whistled a requiem for the lost.

T. T. B.

THE CHINESE AT HOME AND ABROAD.

Apropos to the editoral article upon the Chinese question, in another column, the following items concerning Chinese opium eaters and Chinese emigrants will be read with interest.

OPIUM.

Dr. Newman, in the London magazine, "Friend of Missions," writes as follows:

"The revenue the British Government derives from opium is a cadily increasing."

In 1830-40 it was £ 337,777, in 1879-80 it is £ 8,400,000.

The entire revenue of India is about forty-five millions sterling, so that about one-sixth is derived from opium.

As *The London Times* stated in a leading article last year, "Our Indian Government is the largest manufacturer in the world," and, we may add, manufactures an insidious poison which demoralizes and degrades mankind. We have 550,000 acres of land in India at the present time under the cultivation of the poppy. When the Indian ryot or small farmer wishes to cultivate opium he goes to the Government Agents, has his name registered, his land measured, gets a license for cultivation, and on advance of money. When the plant is above ground, he receives a second advance, and as soon as the crop is ripe, he collects it in vessels, takes it to the Government Office, and obtains the remaining payment. The opium is then exposed in large tanks, and prepared for the Chinese market by being made up into balls, packed in cases, sent to Calcutta, and there sold by the Government at public auction, to merchants, for exportation. The opium costs the Government about £30 a chest; the Government realizes from £90 to £ 100 profit, and produces 40,000 chests or more, annually. It is a pure Government monopoly. Not an acre of land can be sowed with poppy seed without a license. Not a pound of opium must be produced in all Bengal without being delivered to the Government.

Now has the Government encouraged the trade in this vile poison, or does it discourage it? The answer is, it discourages the use of opium among its own subjects in India, and encourages the trade with China.

The latest news from India is that the Government is still making efforts to increase the poppy cultivation. The great opium merchant argues, "The Chinese *will* have the poison; why should not we get the profit out of it as well as any body else?"

Turn to China: there the opium-smoker lies upon his bed, inhaling the vapour from his pipe. The sallow complexion, the bloodless cheeks and lips, the sunken, heartless eye, tell the man. His Government realizes one-and-a-half millions from the opium tax, has inflicted penalty after penalty for opium smoking, but has not power to grapple with it while the foreigner pushes it into the country. In 1839, the Chinese Imperial Commissioner Lin, seized 20,291 chests of Indian-grown opium, worth two millions sterling, and had the whole destroyed.

The opium had been smuggled into Chine year after year by British merchants, under the most indignant protestations from the Emperor. This seizure of opium led to the Opium War.

Speaking of this war in Parliament, in 1840, Mr. W. E Gladstone said, "The Chinese gave you notice to abandon the contraband trade. When they found you would not, they had a right to drive you from their coasts, on account of your obstinacy in this infamous and atrocious traffic. A war more unjust in its origin, a war more calculated to cover England with permanent disgrace, I do not know. The right honourable gentleman opposite spoke of the British flag waving in glory at Canton. What flag is hoisted to protect an infamous contraband traffic, and if it never were hoisted, except as it is now hoisted on the coast of China, we should recoil from its sight with horror." *Now* the Chinese Government admits the opium on the tariff, and have agreed by treaty to its import. This is a most important concession, but how was it obtained? We *forced* China to legalize the trade at the point of the bayonet. The real question is, "Has China given her willing consent, or has she simply been compelled to submit?"

If England ceased to protect the trade, it could then be effectually prohibited by the Emperor." Again, in 1869, an important memorial on the subject was delivered to Sir Rutherford Alcock by Tsungli Yamen, a representative of the Chinese Government. In this protest they say, "Opium is like a deadly poison, that is most injurious to mankind." "The Chinese merchant supplies your country with his goodly tea and silk, conferring thereby a benefit upon her, but the English merchant empoisons China with pestilent opium. Such conduct is unrighteous. Who can justify it? What wonder if officials and people say that England is wilfully working out China's ruin, and has no friendly feeling for her."

THE CHINESE IN SAN FRANCISCO.

[From the San Francisco Golden Era.]

The Chinese are the most prosperous—it would be heresy to say the only prosperous—class of our community. They are always at work, and their expenditures never exceed their earnings. They are industrious, frugal and economical, to the last degree. A Chinaman always accommodates himself to circumstances. He always lives within his means. When times are hard he economizes, and when work is plenty and wages good, he economizes. When he earns but ten cents per day he saves five cents of his wages. When he makes $10 by a lucky turn he does not go on a spree. We may learn much from the Chinaman. His industry and his economy offer a striking contrast to the habits of many who to a good deal of hard scraping at the Chinese. The industry and frugality of the Chinaman has enabled him to acquire much valuable property in this city. He will go on in the same direction, and, if the Burlingame Treaty continues in force, the time is not distant when these patient plodders will own many of our most valuable pieces of property.

NOTES OF A WESTERN TRIP.

(*Continued*)

BY R. ROMEYN.

The man from whom I hired trains for transportation of self and party, from Running Water to Yankton Agency, was a shrewd, keen, loquacious German, and his quaint, droll speeches did much to enliven the trip. I asked him how he came to be found in that far off section. He stated that his first start in the New World was as a drayman in New York City; that he saved money till he had about $1800 00, and with that he went to the Black Hills, sure, in his own mind, of a fortune. But it was slow in coming. There were ten men for every job that needed one. Murders were not infrequent, and robberies of common occurrence. "And so I thought I would safe mine money, and mine life, and I *comen yack East*, and dere I vill shtay." He thought he had "come back East," when he settled down on the verge of civilization in far off Dacotah, while the "ride water man" of Virginia and the New England states, "goes West" if he removes to any part beyond the Alleghanies.

Questioned as to what he thought of Indians and their chances of civilization, he gave a favorable reply, based on what he had seen of those over whose reservation we were passing, and I found that his opinion and mine did not differ much, when, as we passed a dilapidated log cabin, situated just on the border of the "reserve," at the door of which lounged a dirty, shiftless looking white man, with a countenance which showed that it had but little acquaintance with water, outwardly but little acquaintance with soap, or inwardly, he said "D—d fellerish a bad man, he drinks whiskey, and he will sell it yen he can, to dem Injuns." He thinks dey ain't gunt for nothings, and *I know he is a great deal worser nor dem.*" He, as well as others with whom I conversed on the subject, spoke well of the persons who have started an Indian school at Springfield, a town a few miles east of Running Water, but did not believe it would be a success, as, owing to its contiguity to the reservation, it was very difficult to enforce any kind of discipline. When an Indian or his wife wanted to see a child at school there, it was but little trouble to them to drop everything at home, and, astilting a pony, go off to visit it, and, as these was to them of no account, stay for days; during which time the school was of no service whatever to the child, and after their return to their reservation, it was less contented then before. If disciplined in any way, a child could easily find his way to the reservation, and once there it would be "at home" in almost any family of the tribe, and might not be found for weeks. (The missionaries at Yankton Agency, told about the same story.)

Our road ran for most of the way over high rolling prairies, back from the river, and through land apparently not the most favorable for cultivation, but we saw several quite comfortable houses, occupied by Indian owners, and the sight of several buildings occupied as school houses and also as churches, showed us that the mental and spiritual needs of the people had not been neglected. As we neared the Agency, the road descended from the high lands to the "bottom" along the river, and here the houses were located more thickly, and more land was under cultivation. The houses are not large or very commodious, but still *they are houses*, places of permanent abode, and thus attach their owners to the soil, and give them "a local habitation."

On all sides, I saw Indian men putting up hay, for winter use, but noticed that many of them still held to the old style of clothing and long hair, and I saw at least two, loading hay, who were wearing the old style leggins, with the blanket.

The Agent was absent at the east, but I found his clerk and other employees at home, and was cordially invited to make their house my home while at the Agency. There are the several Agency buildings, dwellings, store, commissary and issue room, mill, &c., and two neat and quite commodious churches—the one (St. Paul's,) under Episcopalian control, the other belonging to the Presbyterian denomination. Bishop Hare, the Episcopal bishop of Niobrara, makes the Agency his headquarters, but at the time of my visit, he was absent on a trip to some of the Agencies further westward. A boarding school, just opened for this year, is attached to the Episcopal Mission, and so far as I could judge, from short visits to the school rooms and dormitories, seems to be well conducted. To Rev. Jas. Cook, the Episcopal missionary, and his wife, I am indebted for much information about the Agency and tribe, and all my remembrances of them are very pleasant, as are also those of Rev. Wm. Williamson, the Presbyterian missionary, and his family. He (Mr. W.) was (I believe) born in a mission field, and has been all his life associated with the different branches of the great Sioux tribe, and is thoroughly conversant with them, and the means adapted to their improvement. Both the above mentioned gentlemen and their co-laborers are earnest, zealous workers in their hard, and at times unpromising fields, and deserve, and should have, the assistance and prayers of every lover of his race. Endeavoring, as they are, to cleanse the Augean stables of Indian barbarity, lust and filth, by turning through them the current of civilization and christianity, and to them becomes not only the duty of the christian, seeking to extend the kingdom of the Prince of Peace, but of the statesman, who caring, it may be, only for the things of the world, seeks to promote the peace and prosperity of his country.

I visited the "issue room" of the Agency, to see the Indian men and women as they came for their rations, and thus be able to judge somewhat of their improvement. I saw all stages of it. Grouped about the building, were men and women in blankets and leggins, being haired, with their faces and persons apparently strangers to water, the women carrying children as filthy as themselves; others clad half in civilized, and half in savage garb, others with comfortably clad, and showing real improvement, both in person and surroundings. I counted over thirty wagons and trains, there, and saw many more during my three days stay at the Agency, and was told that several of the Indian farmers were running mowing machines for themselves during the haying season, and that about 1800 acres of land had been under cultivation the past summer.

Of course there was earnest inquiry for the youth from that agency, who are at Hampton, which I answered as best I could. The last I saw of Jesse B——, the boy who was sent home on account of poor health, he was scathing on his father's wagon, driving out of the Agency, while the pleased looking faces of his father, mother, and two or three other persons with them, showed that they were glad to have him at home again.

Mr. Cook sent out for one of the ex-students of Hampton, J—— G——, who had been returned on account of ill health, and I was pleased to find that, although he was living at his father's lodge, and with very indifferent surroundings, (his father too lazy to work, and all living in the old style notions and clothing of his race), he had not forgotten the little he had learned, and was manfully at work, and anxious, if possible, to return to school. Wishing to bring him east again, if his health would admit, I had him taken before the surgeon, and critically examined, but the report was not favorable, and I reluctantly abandoned the idea.

Our first attempt at starting from Hampton was frustrated by being about three minutes too late for the boat at Fort Mason, causing a delay of twenty-four hours. Arriving at Running Water, I found that those three minutes had caused us to miss a boat going up the river, which had passed about four hours after the train on which we should have been, reached that point, and answers to telegrams sent to Yankton and Sioux City, informed me that there would be no boats destined for Bismark, or any other point above Fort Pierre, (which would be a poor point to be left at,) which would leave before September 15th, a week later than we had expected to remain at Yankton Agency, and then it was the amount requisite to make the trip up the river, and had complied with the letter of my instructions from the Department of the Interior. I reluctantly transferred the two Indians destined for other Agencies, to the Agent at Yankton Agency, taking his receipt for them, and his written pledge that they should be sent forward at the first safe opportunity, and prepared for my return. But I seemed to have "struck a streak of bad luck." Delay at starting from Hampton, had deprived me of passage up the river, and now when I wanted to return, there was no boat or stage, coming down.

But run as it happens,—not on my "schedule time," and must be watched for, unless telegraphed for in advance, and just at that time the telegraph line was not in working order beyond White Swan, a station 16 miles further up the river, and, owing in trouble at some point further on, no stages had arrived from the Black Hills for two or three days, nor could any information as to the possible time of their arrival, be had. After waiting two days, I decided that if no stage arrived during the night, I would hire a team for the trip to Running Water, and start five minutes in which to dress and get down to the landing, 200 yards away; and stopping only to throw on a portion of my clothing, carrying some of the remainder on my arm, and casting some into my trunk, which I dragged after me, I started for the landing, to be joined very soon by the gentleman with whom I had been stopping, and who had turned out in a similar fashion, to assist me in getting off. But before getting fairly in the straight channel of the stream from the bend, the steamer ran aground on a sand bar, and we had the satisfaction of waiting nearly an hour at the landing; time enough to complete our toilets in a civilized manner, and to bid good-bye to nearly all acquaintances. The steamer was "the Black Hills," owned in Sioux City, and employed in the "Black Hills trade, running principally between Sioux City and Fort Pierre, which is the main shipping point on the river, for the Black Hills.) (When I passed the site of Fort Pierre in August 1876, there was not a sign of settlement there; now, it has, it is said, one thousand eight hundred inhabitants, and is crowded with freighters and freight, stages and passengers, and, by this time, is the terminus of branches of the Chicago and Northwestern, and St. Paul and Milwaukie railroads, both pushing, with true western energy, for the Black Hills.) On board the steamer, I found Capt. Dougherty, U. S. A., who has for some time been acting as Indian Agent at one of the "river Agencies." I had but little time to converse with him on Indian matters, but he gave very favorable accounts of the work going on among them, and of their evident desire to adopt the white man's ways, and especially to have their children educated.

We had a pleasant run of about six hours to Yankton, and as there was no train leaving that afternoon, and the next day was Sunday, I registered at the Merchants Hotel, and remained till 1. 40. a. m. on Monday; and spending most of the afternoon of Saturday looking about the City, and comparing impressions with those received at the time I passed through it with my regiment, in Aug., 1876. It has not grown much, nor has the country, in its immediate vicinity, been settled as rapidly as it should have been. Much of the land has been purchased by speculators, who hold it for high prices, which they are not likely soon to realize, as the railroads now building to the river above it will not pass through, but from 40 to 100 miles wide of it, and therefore its growth must be very slow, and when the day comes, as it must soon, when the capitol of the Territory shall be removed to some more central location, all its glory will depart, and it will settle down into a humdrum country town, and fortunes in real estate, of which its citizens spoke so gaudily in 1876, vanish into thin air.

Not caring to repeat the experience of the outward trip through Wisconsin and northern Iowa, I purchased tickets via Chicago and North-western Railway, to Chicago, and leaving Yankton in the morning, was at Sioux City, (91 miles,) in time for an early dinner, and had some time to look about the city. It has a curious situation, high bluffs, and low "bottoms," with the broad, shallow river in front, giving every one a fair opportunity to be suited as to location. From Sioux City to Missouri Valley Junction, the road ran through the "bottoms" of the Missouri, and on every side the country showed every sign of prosperity. Broad fields of corn, hundreds of acres in extent, were diversified by grading lands, covered by herds of cattle, and one soon ceased to wonder where the eastern world could find its food, and began to study how all this food was to be disposed of.

At Missouri Valley Junction, 75 miles below Sioux City, our car, after a delay of nearly an hour, was attached to the train known as the California Express, and the last Chicago, (distance 407 miles,) at 2.15 P. M., the next day. It had lost time on the Union Pacific road, and was now striving to make it up, and ten miles of straight track were passed over at the rate of a mile over sixty miles an hour, soon after we started. A hotel car was attached to the train, and passengers could obtain a first-rate meal at a very reasonable price, while traveling; a great improvement over the "twenty minutes for dinner" plan, in vogue on eastern roads.

Any matters of that portion of the return trip east of Chicago, would be of no interest to the readers of the WORKMAN. A brief visit with friends in Michigan, and a hurried call at Carlisle, protracted it somewhat, and it was with feelings of relief that I closed the journey at Hampton.

AN INDUSTRIAL SCHOOL IN KNOXVILLE.

Miss Emily L. Austin, whose effort for the colored people of Knoxville, Tennessee, have given them a new public school house,—and introduced industrial training in the school, gives the interesting account of her success thus far and desires for the future.

"I feel that it is due to the friends who so kindly gave their money to build a public school house for the colored children of Knoxville, Tennessee, that there should be some account given of the success of the enterprise. The sum of six thousand five hundred dollars was raised in Boston, New York, and Philadelphia, to which the city government of Knoxville added two thousand dollars and the land on which the old house stood. This was torn down and the new one built on the same ground. It is a handsome, commodious brick building, with six rooms, two of them so arranged as to be thrown into one when occasion requires, making a large hall, capable of seating four hundred people. The colored people are grateful beyond expression, and manifest the greatest delight in the new house. The first Sunday that we met in it, they could not restrain their tears, and the prayers which were offered were expressions of heartfelt joy and thanksgiving. One man was carried back in thought to the old slavery days; he spoke most touchingly of their darkness and ignorance; then of the early days of freedom, when they had nothing but their liberty; of the trouble they had, as grown men and women, to learn the little they now know: and, with the tears raining down his cheeks, he thanked God that during all this time He had a purpose of mercy, and a thought of love toward them, which the last one manifested to all the world in this is best gift to their children and children's children.

The School Board are doing all that is possible for them, to make their schools efficient in every way, but it is slow work with the small means they have at their command. Their teachers are poorly paid, and the appliances and apparatus for teaching are very meagre. They can not do more, as present, than they are doing for all their schools.

The work which I now want to do, is to introduce industrial teaching into the public school. We have started a sewing and kitchen school; the latter is a great success. Many of the children use at home the ideas they get from these lessons, and I feel assured that this branch of our work will be a great benefit in the homes of the people. For the sewing school I need help, very much indeed. I want to have sewing thoroughly taught, that it may be a means of support, as well as a comfort at home. I make my appeal to the friends of the freedmen to give me at least six hundred dollars a year to carry on these two branches of industrial employment. The School Board has given us the use of the house on Sunday afternoons for our Sunday School, as it is not denomination in its character; we have from four hundred and fifty to five hundred scholars, children and grown people, and three teachers. Beside these, we have in our own house a small night-school for men and women, and a Bible class on Sunday night.

I thank my friends for all their kindness to me in the nine years that I have been with these people. It is not time just yet to let the colored people alone. They are improving in ways; their homes are more comfortable; their habits are better; they more neatly clothed; and they are leading better lives in their homes and in their church relations. They are not beggars or paupers, and I believe that we can sooner make our industrial school self-supporting with them than with the home. I only ask that you will give me the chance to try fairly with these new industries which you are introducing into your own schools; and, by the blessing of God, I know we shall soon show you that the colored man is capable of standing alone, and bearing his part in the great household of God on the earth. If any one is inclined to help us in large or small sums, money may be sent to me, from October to June, in Knoxville, Tenn; to Miss Isa E. Gray, No. 29 Mr. Vernon Street, Boston; to Mrs. John E. Parsons, No. 208 Madison Ave., New York; or to Mr. William G. Crowell, No. 510 Walnut Street, Philadelphia.

EMILY L. AUSTIN."

For many years the starch factory at Oswego, New York, has purchased corn in the West for thirty cents per bushel, taken it over a thousand miles, extracted the starch, and sold it to the very people who produced it, at the rate of six dollars per bushel of corn. The West has not been enterprising in this matter. Of late, however, several starch factories have been built, and the corn is utilized where it is grown. The profit which has been taken by Eastern man will be distributed at the West, where it belongs.

The temperance women in many places in Indiana had free lunches, with tea and coffee, near the polls on election day to keep the voters from drinking.

CHRISTMAS CAROL.

BY EMMA A. SMULLER.

Hark! the bells are ringing;
Send the bells are swinging.
Merry Christmas bells
Tell of happy meeting,
Tell of gift and greeting,
While our Christmas carol still the chorus swells.

This the bells are telling,
By their full and swelling,
Blessed Christmas bells!
Telling us the story
How the Lord of glory
Leaves his home in heaven, here a stranger dwells.

Hear! the bells are calling,
By their rise and falling,
Holy Christmas bells!
Call us to adore him,
Bending low before him,
While our Christmas carol true devotion tells.

Loud the bells are ringing,
Sweet the children singing,
Answer them again;
While the angels o'er us
Join the Christmas chorus,
"Glory be to God! and peace, good will to men!"

TEMPERANCE.

COST OF DRINKD AND TOBACCO FOR 10, 20, 30, 40, AND 50 YEARS.

Fathers, mothers, guardians, young men and maidens please read the following table of calculation, and see what it costs a young man, starting at the age of twenty, to take three drinks at ten cents each, and smoke three cigars at ten cents each, daily, making the expense sixty cents per day. The small amount of sixty cents per day, if deposited in a Savings Bank at eight per cent. per annum interest, and compounded every six months, will produce the results as given in the following table:

1st ten years, between age of 20 and 30,					$3,200
2d	"	"	"	" 30 and 40,	10,500
3d	"	"	"	" 40 and 50,	20,200
4th	"	"	"	" 50 and 60,	00,600
5th	"	"	"	" 60 and 70,	136,360

You will observe that the above includes no extra expenditure for smoking or chewing tobacco or cigarettes, snuff or even an occasional "Bottle of Wine," but merely one cigar after each meal, and three drinks during the day and evening. We believe the above estimate below rather than above the average with those indulging in these luxuries or more properly dissipations.

MORE THAN DOLLARS AND CENTS.

There are results in this world, which cannot be estimated by dollars and cents. The time wasted in the indulgence of these pernicious habits, which tend to keep a man away from his family during those hours in which a wife is entitled to her husband's company, should be a matter of very serious consideration.

Money is not the standard of value, when character, manhood, and all that is ennobling in human nature, is taken into consideration.

Does it pay to tolerate my traffic which breeds poverty, crime, idleness, agony, shame and death wherever it is allowed? I say not!

Rum and tobacco sellers, you alone who think these iniquities do pay, tell the pale, wasted wife and mother, and the ragged, neglected children, that out of the rum and tobacco you have sold their husbands and fathers, you have become rich.

Tell the drunkard that for him withered, blunted body's death and his soul's perdition, you have been paid so much money.

Tell the orphans in the street that you robbed them of parents, home, bread, education and friends, to live a lazy, easy life, yourself.

Stand by the graves of the last 12 months and shout to the 60,000 sots who die annually, that you are one of those to whom they are indebted for their desolate death-bed, and that you sacrificed them for gold.

Follow your victims to the bar of God, where you must speak the truth—there will be no prevarication there—and say before Eternal Justice, "I slew them, and have brought endless perdition upon myself for the sake of a short and infamous life on earth."

INTEMPERANCE among women is increasing at an alarming rate; statistics prove its prevalence to be startling. In the upper circles of society, it is impossible to give a correct statement of its increase, because the retired life of most women favors the indulgence in secret, especially during its earlier stages. But among the lower classes of our cities we have no difficulty in estimating the inroads Rum is making.

The causes of intemperance are social temptations whenever women mingle in society; for wine drinking has become a custom almost as universal as eating, in fashionable circles.

Intemperance affects a woman's moral character more powerfully than it does that of a man. Under it she becomes coarse in manner, gross in thought and feeling, and vulgar in speech. When her system has become alcoholized, her mind also becomes animalized, and she is sure to transmit to her children these degrading qualities in a tenfold greater degree than does the father with the same habits. This fact all medical authorities attest, that the future life of the child—mental, moral, and physical—depends chiefly upon the purity of the mother.

The reform must begin in home circles. Mothers must teach their daughters to abstain from drinking wine, if they would keep them from drinking brandy. Teach them that any stimulant which produces a temporary exhilaration, if repeated, will soon become a fixed want of the system, and every nerve will cry out for it.

Is it right to have preachers in our pulpits, and intrust teachers in our schools and Sabbath-schools with the care, instruction and guidance of our children, that drink ardent spirits, or use tobacco in any form—whose precept and example are potent in influencing our children for good or evil? Parents, please think a moment about these honest facts. They must come home to every one who loves his children, and earnestly desires their instruction and best interests.

TOBACCO, chewed, smoked, snuffed, or used in any form, is unhealthy, expensive, uncleanly and inconvenient, producing deadening and injurious effects on the nervous system; and is especially injurious to children and youth, dwarfing more or less, mind, body and morals.

Fathers, mothers, friends, will you set the example, and use your influence against these pernicious habits? If you will think seriously on this subject, and deal honestly with your convictions, we feel confident you will join in this effort.

MODERATE DRINKING leads to drunkenness; Drunkenness leads to poverty, misery, sickness, crime, insanity, suicide and death; makes hard times, fills our jails, poorhouses, ruins young men and kills old ones; increases our taxes, and retards the progress of religion.

600,000 persons in the United States are drunkards. Of these, 60,000 annually fill dishonored graves.

$600,000,000 are spent annually in our country for intoxicating liquors, or more than for bread.

STORIES OF ANIMAL SAGACITY.

Colonel Rice, now of General Miles's Fifth United States Infantry, was in company recently with a gentleman of our acquaintance, and the conversation naturally turned on Indian warfare and frontier experiences, the day being the anniversary of the Custer massacre. Colonel Rice who has seen service in Indian campaigns, related a striking anecdote concerning the sagacity of a horse which lost his rider in the fatal fight. Some months after the battle a steamer having on board a portion of the Fifth Infantry was pursuing her voyage near the mouth of the Powder River, on the Yellowstone. The men on the lookout, one of whom was the famous scout Buffalo Bill, who was scouring the surrounding country for indications of hostile Indians, saw in the distance an object moving slowly towards the boat. They anxiously scrutinized it as it continued to approach, supposing that it might be the advance of a body of hostiles. Their suspicions were not lessened when they discovered it to be a horse, which might be that of a scout watching their movements or signaling the advance of the enemy in force. When the animal came to the bank of the river, however, it was seen to be unmounted and alone, and on approaching the boat it neighed and pranced, manifesting every sign of unfeigned joy at recognition.

The boat was stopped, and when the horse was taken on board it was found to bear the brand, "Seventh Cavalry." The place where it was found was seventy or eighty miles in a bee line from the scene of the Custer fight. The animal had evidently seen or heard the boat in the distance, recognized it as a sign of civilization, and, being tired of its free life in the wilderness, gladly embraced the opportunity of returning to its accustomed duties.

Another kindred incident showing the strength of the second nature implanted by human companionship in domestic animals was related by Colonel Rice. Upon one of the steamers used in the campaign against the Sioux, was a small dog belonging to General Miles, which one day fell overboard and was given up for lost. Six months afterwards, as the same steamer was returning, the singular sight was witnessed of a small dog and a wolf trotting along the shore in friendly companionship. The dog was recognized as that lost overboard. The steamer was stopped and the dog taken on board delighted to meet with his old friend, while the wolf on the approach of the vessel ran back into the bush. The intelligent animal had apparently anticipated the return of the boat and patiently awaited his restoration to his master. —*[Boston Traveller.*

A PRAIRIE BOY'S STORY.

HOW TO MAKE BOYS INDUSTRIOUS.

A correspondent of the *Tribune* supplies it with the following highly interesting narrative, which has a moral that every reader can draw for himself:

Late in the fall of 1878, while passing through Western Kansas, I stopped at a small station on the Kansas Pacific Railroad, hired a conveyance, and started to call upon an old friend, who, I was told, lived about ten miles south. I drove on over the level prairies, admiring the rich, fertile soil, the clear running streams and the many sleek, fat cattle grazing on the rich prairie grass, and wondering not that this land was called the "Golden Belt" of Kansas. Soon, however, I found that I was driving west instead of south, and there were constantly so many branch roads that I was indeed puzzled to know which to take. Just then, a boy of about fifteen, rode up on horseback, and a bright, handsome lad he was. He informed me that I was off the direct route, but that he would ride across the prairie with me until I reached the right road. I soon drew him into a conversation, in which I was much interested. His experience in farming, I know will be interesting to other boys, perhaps serviceable to their parents, so here is his story:

We all came here two years ago last spring, and father immediately entered a claim under the Homestead law, for 160 acres of land—and it's first-rate land, too, I can tell you; none better any where about here. Well, father said that he wanted to encourage me in being industrious, but he went to work very differently from some men I know, in encouraging me. Now there is Mr. A., who lives on the quarter-section adjoining ours, and he has two sons, John and Henry. John is a little older than I, and Henry is a year younger. Well, the way he encourages his boys is by having them up by daylight in the morning, and keeping them on a keen jump all day long. He hardly allows them time to eat their meals. Why, last summer they worked till 9 o'clock every evening, and didn't find an hour all summer in which they could go a-fishing, or even in swimming. Then, to pay them, the old man gives them their board and his own worn-out clothes, with occasionally a pair of boots or something of the kind thrown in. That is the way he teaches them to be industrious. But father's plan is entirely different. He gave me four acres of land which he had broken, (this was two years ago last spring), and I was to do just what I pleased with it, and he would furnish me seed or means to obtain seed; all that he required of me was that I should attend to the garden, do the chores at the barn, and go to school in the winter.

The first year I planted corn, and from my four acres raised 120 bushels, which I sold for 30 cents a bushels.

The next Spring father let me have the use of his team, and I ploughed my four acres and planted one and a half acres in castor beans, one-half acre I put in strawberry plants, one acre in sorghum, two rods in onions, and the remainder of the acre in sunflowers. Father laughed when I told him my plans, but he said it was my own land and I could do as I liked with it. I told him I wanted to experiment on different crops, so as to see which was the most profitable. Well, my castor beans were a great deal of trouble. I had to watch them so closely not to lose them when they cracked open. It was necessary to pick them immediately as fast as they ripened; but my little sister, seven years old, could attend to them about as well as I, and she did them faithfully on my promising her $5 when I sold my crops in the Fall. I raised twenty-two bushels of beans off of my one and a half acres, which I sold at $1.25 a bushel, so after paying my sister $5, I realized on them $22.50.

Father had raised considerable sorghum, and he had all of the arrangements for pressing, boiling, etc. We worked together in preparing our sorghum, and I had from my one acre, two barrels of good sorghum molasses, which I sold for 35 cts. a gallon, thus making $22 from my sorghum crop. My sunflowers, which were the laughing-stock of so many, brought me enough to pay for my trouble. I had planted and cultivated them very much as if they were corn. The flowers were splendid, many of them measuring three feet six inches in circumference, the stalks being from ten to twelve feet long and three inches in diameter. I planted them principally for the stalks, which I sold over in the next town for fuel. I had ten cords off of that part of my acre, and I realized $15 from the sale of them. I gave the seed to my father for his poultry. He thinks they are better than corn. Those who bought the stalks say that they burn readily, and make a very hot fire. Last spring I planted nothing but sorghum and onions, as they had brought me the most the year previous, and I have done better than either year before. My onions were the most profitable crop of all, as I have made $12 off of my two rods. So last fall I had, after disposing of my crops, $71.50 in cash, nearly double what I had made the year before. I spent $20 of this on my wardrobe, $10 at Christmas, bought three calves at $10 a head, and had $11.50 left for sundries. My onions didn't do quite as well as the year before. So this year I have made $300 off of my four acres. I can assure you I am begining to feel very much encouraged in being industrious. I have just bought twenty more calves. I had to pay $12 a head for these, but they are beauties I can tell you. If they do well they ought certainly to be worth $450. I was offered $90 to-day for my other lot. I have no trouble in finding a market for my produce; for what I cannot sell here I ship on the railroad, and, as they carry at reasonable rates, I often prefer shipping, as I get better prices in the larger towns. I shipped nearly all of my strawberries this year.

I was fifteen years old last August, and am worth to day $390. To be sure my father has favored me in every way, furnishing me with seed, feed for my stock, allowing me the use of his team and farming implements, etc., etc. But now I can afford to be more independent, and hope, before long, to help him, instead of his helping me. Father is making money, too. This is a fine wheat country, and he has put the most of his land into wheat. We have had fine seasons so far for our crops, and next year we may have grasshoppers, or drought, or some drawback; but we have enough ahead now to stand one or two unprofitable seasons, so we don't worry. I intend to invest every year in stock, as I have found it far more profitable than anything else. But don't you think that father's method of encouraging one to be industrious is better than Mr. A.'s? Mr. A. is just as well able to do this for his boys as my father is to do it for me, but they are of different dispositions, you see. Now there is your road; you keep straight ahead till you come to a red barn, when you turn to the left, and two miles further on you reach your friend's house, a white frame, with a porch in front. Good morning.

A good moral is conveyed in this boy's story; one which I hope this letter may impress upon the minds of a multitude of parents.

OSAWATOMIE, Kansas. C. L. K.

APPREOIATION OF THE "SOUTHERN WORKMAN."

We have received the following pleasant letter from an appreciative subscriber.

PLANTSVILLE Co. *Nov.* 11. 1880.

Mr. J. F. B. Marshall:

Dear Sir:— I have taken the Southern Workman, for a number of years, have found it a readable, instructive paper, improving from year to year. But the last year has been very marked in its able articles in regard to the uplifting of the two races for whom you especially labor, I take some ten or twelve weekly and monthly publications, and say decidedly that I find in none of them matter more important for lovers of God and man to ponder than I find in some of your last numbers. The paper ought to have a more extensive circulation.

Enclosed please find check for $4 to pay for the paper to my address, and others specified.

Yours truly, T. H.

The report that the Porte has granted a concession to an English company for the construction of the Euphrates Valley Railway, and to a French company for the Jaffa Jerusalem line, has been very favorably received by the Jews in Jerusalem, especially as, according to their belief, a prophecy in the Scriptures will thereby be fulfilled. The Euphrates Railway, so it is proposed, will intersect the former provinces of Assyria and Babylonia, and will have stations at Mosaul and Hillel, in the neighborhood of which towns are Assyrian and Babylonian ruins. It has been suggested at Constantinople that eventually a junction might be effected between the Euphrates line and the Egyptain railways, which, if carried out, would confirm the following prophecy of Isaiah (chap. xix. 23): "In that day there shall be a highway out of Egypt to Assyria, and the Assyrian shall come into Egypt and the Egyptian into Assyria, and the Egyptians shall serve with the Assyrians."—*Jewish Chronicles.*

The colored drivers and school children of Augusta, Ga., propose to organize a Society for the prevention of cruelty to animals, in memory of Miss Louise King, whose death has been so deeply mourned in that community. She was a highly accomplished woman, more distinguished for her philanthropy and good deeds than for her wealth, beauty and accomplishments, except as they were. She had been particularly active in organizing societies and securing legislation for the prevention of cruelty to animals.

HAMPTON STUDENTS' OWN.

From the Senior Class.

MILITARY INSTRUCTION AT HAMPTON.

The object of the military work at Hampton is to teach the students to obey and to command, and to give them a knowledge of military tactics. The male students at Hampton are organized into a battalion under the immediate charge of Capt. Henry Romeyn, who is an experienced as well as a theoretical teacher of tactics. Capt. Romeyn's heart is in his work; the students are proud to have him among them, and the success of his teaching is indisputable. As his reports will show, the school battalion is better organized this term, to start with, than it has ever been heretofore.

I am confident that the military branch of the school will be a success, and will do credit both to the commandant and students. Being a member of the battalion, I speak from experience. The military work at Hampton is doing an incalculable good; it inspires the students, adds to their activity of motion, cultivates elegance and cleanliness of appearance, and above all, it brings the students in contact with the two great lessons of military life,—first to obey, and secondly to command. I put them in this order, because if we would ever learn to safely command, we must first learn to obey.

Mc. K——.

THE ADVANTAGE OF OUR WORK DAYS AT HAMPTON.

What is the use of persons who are going to school learning how to do all kinds of works is the question which so many people ask. I am afraid that such people do not look at the work itself in the right manner, and I am sure not in the way the Hampton students look upon it.

We have come to the conclusion that instead of it being a disgrace, as many consider it, it is one of the greatest blessings on earth to know how to work, and to do it well.

What good would it do for us to come and stay here the one or perhaps four years, filling our heads with book learning, and not learn the least little how to do any kind of labor. On my part, I think that our education would cost amount to very much among the colored people.

If those who thought that it was a dishonor to send their children to schools like this, would stop for a minute, and think of the good it will do them in some day, it is my opinion that they would abhor the idea of not having them taught to do all kinds of labor.

The men and women that we are needing are those who can and will do every thing in their power to help bring the race to the highest mark of civilization.

I think that it is quite time we were trying to do something for ourselves, for we have been helped by the kind friends of the north long enough, but remember, if we ever expect to accomplish anything in this world, that it must be done by the work of our own hands.

Suppose that all the attentions, where educated people were needed, were occupied. What would we do to obtain a living, if we had not been taught to do all kinds of labor? Do you not see then, that our work days at Hampton are of some advantage to us when we go into the world to work for ourselves? Would that there were more such schools throughout the south, and the negro race would be in a better condition. The greatest men who ever lived, once had to work, and why should we not do the same.

It is true, that some of our American people do not like the idea of having to work hard for a living; but we hope the day will come when all such ideas will be abolished.

W.

SHOULD THE AMERICAN INDIAN BE ALLOWED SUFFRAGE?

We ask, should the American Indian be allowed Suffrage? I ask, why not? Is it that they are inferior to the white or black race? Under what circumstances are they so; is it that they are savages? We were all savages once, and a great many are savages yet, and are as much in need of civilization as many of the Indians. It is evidently known that all men are born equal, the white, black and red man, but it is left to the advantages, which he has had and to the use he has put them to, that is what makes the man; so I say give the Indian suffrage and the future will tell you what he is and what he will become.

When the Negro was in chains of slavery and ignorance, who would have thought he would have reached the state he is now in to be sent to the state legislature the House of Representatives, and the U. S. Senate, to make laws for the people of this government; to be sent to foreign courts to represent this Grand Republic abroad, and to hold high offices of trust and honor? Who would have thought that he could attain these high and honored positions in the short period of fifteen years?

Why can't the Indian rise in like manner? If you will extend to him the right hand of fellowship I believe he will rise, and if the money now being expended for the support of troops for the killing out of the Indians, were invested in the education of the Indian to help him on the road to civilization and Christianity, he would soon rise and follow in the track of the Negro. The least thing the government can do for these helpless subjects is to aid and help them from their low and down trodden state; just look at the injustice they have been subject to; they have been driven from place to place until they have no home; of this vast dominion they can't claim an inch of land, which the government will recognize as their own personal property. They have been hunted like wild beasts from place to place, ever since the (so called) civilized man set foot on the shore; they once occupied this whole coast and the adjacent islands of Cuba and Hayti also many other islands on or near the coast, and I will ask, where are they? The answer is that they have been swept from the face of the earth into eternity, and their bones are now moulding in the dust. And shall we, now the people of the United States, blot out of existence the Aborigines of the far west, or shall we treat them as a people that are our own flesh and blood, all descendants of Mother Eve? now, why not try and lift or help a fallen brother rise and remember the Golden Rule: "Do to others as you would that they should do to you."

If you think that he is incapable of learning, why just take a visit to Hampton Normal and Agricultural Institute, or go to Carlisle Barracks in Penn., and see for yourself the progress they have made, and see the noble work that is being done for them, partly by the aid of charity, and partly by the government, and you will see that he is worth educating. If you do not educate them you will exterminate them, and I am sure educating is much easier than extermineating; it will cost millions to educate them, and millions, plus the lives and pensions, to exterminate, now which will cost the more, the educating or the exterminating? Judge for yourself.

If they are not educated or cared for by the government, but allowed to stay in their savage state, the nation (which is supposed to be a Christian nation) will bitterly repent it judgement day, for it will have to be accounted for. I say give them all the right of suffrage and see that they are protected in all the rights of citizenship and let them make the best of it.

A. B.

From the Middle Class.

OUR NEXT PRESIDENT.

Though we are poor, we should never be discouraged in life. For when we are discouraged, instead of progressing we are retrograding.

Be of good cheer, boys, always do your best, and there is no doubt of your success. We know this by the examples that have been set before us, one of which is the life of our next President, James A. Garfield. He was once a poor boy, born in Orange county, Ohio. His father died when he was very young; and by her own energies his mother had to take care of him and three others until they were old enough to care for themselves. When James was sixteen years old, he chopped wood near Lake Erie. While on the lake, he received a new idea which led him to believe that it would be good for him to spend a number of his days as seaman. On his return home, he told his mother that he could no longer resist the impulse to seek a seafaring life and should therefore leave home immediately. He went to Cleveland where he obtained a position of driver on a canal-boat. His was so earnest and learned so rapidly that he soon became so much esteemed, by his employer that on his first round trip he was promoted to bowsman. He stayed on the boat till he became sick with a fever. After he got well his mother dissuaded him from making another voyage, and the following spring he went to Geauga Academy to begin the struggle in getting an education. His cousin, a boy about the same age, went with him. They rented a room, and lived principally on provisions they took from home. When not in school he used to work in the hay fields for day wages; just as many of us have done. After he left Geauga, he went to Hiram, there too, he earned money to pay his way by teaching county schools, and working at the carpenter's bench until he was offered a tutorship in the Institute. He then desired a college education, and it said that he went over sixteen years course of study in three, and taught his classes at the same time.

In 1854, when he was about twenty-three years old, he entered the Junior class at Williams College, Williamstown, Mass., and after graduating went back to Hiram, and obtained the professorship of Latin and Greek. He made his first political speech at Williamstown in 1856, and was elected to the senate of Ohio in 1859. Since then he has been a lawyer, a soldier, a general, a congressman, and is now the President elect of the United States.

B.

LET US GO SOUTH.

There has been so much said about bulldozing in the south, that few men will venture to go, and it is true that these low and cruel practices have existed, in some or all of our Southern states. Vice and wrong will not all ways triumph; no, not in the most secluded, or remote parts of the world.

I have lived in the south about fourteen years. I lived in the vicinity of Yazoo City, Miss. more than thirteen years. And I have for the first time to be molested by any man on the account of politics. I did not bother my head about politics. My express business was to teach and preach. And to do this thoroughly was and is now my only earthly aim; it is my earnest desire. If we would go south and teach, and lift up the ignorant Negroes, not by profiting ourselves only, but with a spirit and an intention, bent to do them good, we would not be likely to lose our reward:—

H. C. A. H.

HOMES.

At my home there are a great many colored people who are buying land, in order to make a home for themselves, when about 9 years ago it was a rarity to find a colored man owning real estate. But now it is very common to find people owning from 10 to 150 and 200 acres of land, and in buil ding their houses they make great improvements. Numbers of saw mills, school houses and churches are being built, which employs a great many, and things generally seem to be on the advance, and the colored people who have been kept under for so many years are rising by degrees above their former condition, and trying to make men and women of themselves.

W. D. L.

From the Indians.

Indians have been very ignorant as long as I can remember, but their minds are strong now to get in the new road. The men use to be warriors and the women the great workers. But friends I tell you, before I came here I would see some Indians, men and not women cutting rails or logs for themselves or plowing. They can do farming themselves, they don't have to get a white man to teach them, but understand, only they have not got any implements to work with if the Government just supplied all the implements they need they would soon get out of the ignorant way. They are trying to quit their old ways in dressing and gambling and other sorts of bad things; they have turned to the right way. They want to be civilized like any other nation. And at their Agencies or Missions they have schools there. The old people sent their children there and some let their children stay at their Boarding School and they all go to school every day except on Saturdays. On Sunday they go to the school with their children to hear the God's word. They are not ignorant in God. They believe in Him. You all know that some Indians are civilized, having churches and schools and making things for themselves, and the other Indians will some day come up like them, and also they can have a good education if the white people will be kind enough to help them up as men and women. They are willing to learn and not only this but to learn how to be house-keepers and cattle, and other kinds of business. The Indians are careful about their children going to school they watch them when they go to their school to see them get there. Few years ago the Government sent for some Indian children to go to Hampton and Carlisle, and now here we are at these schools doing and trying the best we can in our studies and working for the cause of our people. We want to teach them, and also teach them what we will learn from Hampton.

Nov. 10th. In the afternoon we all went down to the Fort to see the review that was going on down there. We saw many sailors coming to the shore, and then I ran in ranks and then marched up where the other companies were, and also saw soldiers, they were from Washington and also the soldiers of the Fort. We saw many little boys among the sailors. We also saw Pres. Hayes and Sec. Schurz I went up to Secretary and shook hands very hard because he has done a good thing to the Indians for sending them east to school. They got through drilling, we went back to the school; we had a nice long walk. The next day the Pres. and the Sec. came to visit the Normal School and the Indian school. They went around where they were; saw them working in their trades. After that they went into their school and saw them in there: I think they enjoyed it very much, and then we went up in the chapel and sung some songs for them. Mr. Hayes spoke few words to us and bade us good bye and went down the boat and got in the boat while the Normal School band played music for them, and all the boys and Gen. Armstrong gave three cheers to them and they went off waving their hats and handkerchiefs.

Last Saturday Indian boys had a picnic and had a very good time while the other boys were at work: the boys that go to school with the colored students we were glad that they had some fun.

One of our Indian students works through the days and goes to evening school; he thinks he can learn more, and also he wants to be a good farmer.

Last spring we planted some potatoes, now the Indian farm boys have been gathering them.

One of the Indian students had been working in the Carpenter shop he had been putting some glasses in some of the Cottages.

I wrote this all by myself and will set the type. Hereafter the type will be set by myself.

James Mcmurr,
Junior Class.

A LETTER.

A Cheyenne Indian at Hampton Normal School, Hampton, Virginia, November 1880, writes:

Dear Friend J. R. Merie. I would like to tell you what I was doing, in Miss. First thing, I want to speak about is what I learned about the white man's way, about two years ago now, I have learned something [illegible] have been away from my old home about five years ago now. First they took us to Florida they first teach us the good way, and I find Indian real very hard, so I thought, I will never walk the Indian road any more; I find that the white people and colored people are very good friends to the Indians. I think I will be kind to every body and work for white people. After three years at St-Augustine, Florida, then come to Hampton, Virginia, to go to school and work. That is the reason I like Hampton, and I have got one more term, to learn more English and work. I am trying very hard to do well; I want to be the best Indian here. Some white people say that Indians do not know anything, but the Indians are learning something. Now I must tell you about my vacation and my visit at Lee, Mas. I was very glad to learn an there the farm. I stayed with Mr. Frank Merrill, he is very kind man, he learn me how to work with a mowing machine. I work on the farm. I cut corn stalks, and pick potatoes, and pick apples; Mr. A. Hyde, who has charge of all the Indian boys, want us all work on the farm and learn; he is very kind to me, and of all the Indian boys. We stayed there four months. We had pleasant visit to Boston. I was very much delighted, to see so many white friends in Boston. I saw the Governor in the State, and went in a house and saw some old flags and some the books in the State house. We went up the top of the cupola, it is high. I looked all round the city of Boston. There we met Gen. Armstrong in the Adams house; we were glad to see him, he was glad to see us also. Sunday morning we went to Church, Trinity church it is very beautiful church. I saw great many beautiful things. Boston is a good city, very handsome; I like it very much. Every Sunday night we go to church, and Gen. Armstrong speak in there.

I saw great many white people, and shook hands with them and spoke with them. The next morning we went in horse cars; went to another place to see a school house. Gen. Armstrong spoke and talked both about Indians and Colored. We stayed three days in the Adams house. then we got in a car and went to Norwich, Conn. to a large meeting of the American Missionary Association. Gen. Armstrong spoke to the people and the Indian boys and girls sang hymn. We went next to New York to a meeting of Episcopal ministers, we sang hymns there too; we stayed in the afternoon in the Hotel, New York. Then we came to Hamptoe. I was glad to see all the Indian students, also teachers and colored. I will now come to a close.

Yours, very re-peectfully,
James Bear's Heart.

and, in a little while, she too had found a grave in that far distant land. Uncle Lias's spirit gave way entirely after this sad event, and in utter despair he wrote to his old master, imploring him to send him money to return to Virginia, and declaring that if help were not given him by his old friend, he and the only child left him would perish in that desolate climate. Some weeks after this, a messenger from Monrovia brought the sorrowful exile a letter containing the draft for necessary funds, and, as there was barely time to reach the fort before the ship which leaves monthly for the United States would sail, Uncle 'Lias stopped long enough to gather up a handful of clothes, bestow his African estate, on which fine crops of coffee and tobacco were growing, upon one of his fellow emigrants who had been kind to him in his trouble, with the request that when the crop was ripe he would divide it with two or three widows whose husbands, like his wife, had but left their homes in America to find graves in Africa; and taking his little son with him, made all speed to reach the ship, which was setting sail as they reached the shore.

Uncle 'Lias returned to his Virginia home, weary and worn with his adventures, much poorer than when he set out, enfeebled in health and bereaved of his beloved wife and child.

I am glad to say, however, that he has lived to see better times. He soon grew strong again in the invigorating atmosphere of his native hills, and went to work like an honest man, to repay to his kind old master the money he had furnished to bring him home, which he devoutly believes reached him just in time to save his life. In course of time he married again, and, by industry and economy, has become the owner of a snug little house in the suburbs of the city, which commands a fine view of Lynchburg and James River, a prospect much more to the taste of the ex-emigrant than the jungle and forests of Africa.

Like the patriarch Job, after all his tribulations and trials, he is again surrounded by peace and plenty, and his experience as a traveller, dearly bought as that of the Man of Uz, serves for many a discourse with friends and neighbors as they drop in for a chat on Sunday afternoon.

LYNCHBURG, VA., *Nov.* 3, 1880.

$5 Outfit sent free to those who wish to engage in the most pleasant and profitable business known. Everything new. Capital not required. We will furnish you everything. $10 a day and upwards is easily made without stirring away from home over night. No risk whatever. Many new workers wanted at once. Horsford's Acid Phosphate produces most excellent results in the prostration and nervous derangement consequent upon sunstroke.

HORSFORD'S ACID PHOSPHATE

Makes a Delicious Drink.

DR. H. HENRY, the widely known and eminent family physician of New York, says:

"Horsford's Acid Phosphate possesses claims as a beverage, beyond anything I know of in the form of medicine, and in nervous diseases I know of no preparation to equal it."

Horsford's Acid Phosphate restores enfeebled digestion, imparting vitality and correcting the feeling of lassitude so common in midsummer.

Horsford's Bread Preparation makes Biscuit, Rolls, Cake, etc., that are more wholesome, nutritious and digestible than when made in any other way.

THE HYGEIA HOTEL,

OLD POINT COMFORT, VA.

Situated within one hundred yards of Fort Monroe;

At the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier going and returning, with the U. S. mails, landing only 30 rods from the Hotel, which is sustantially built and

COMFORTABLY FURNISHED;

Has hydraulic passenger elevator, gas and electric bells in all rooms, water-rooms for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or public building in the country. And as a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this House, with accommodations for about

SEVEN HUNDRED GUESTS

Presents inducements which certainly are not equaled elsewhere as a summer resort, or cold weather sanitarium. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleeplessness and nervousness the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful soporifics at the Hygeia.

Hand Crabs

FROM HAMPTON ROADS.

Carefully Picked, Packed, and Hermetically Sealed, by

T. T. BRYCE,

Normal School Grounds,

Hampton, Va.

The undersigned takes this method of advising the public in general, and the lovers of good things in particular, that he has this day opened a Packing House on the grounds of the Hampton Normal School, in which he will prepare for market the meat of the hard-shell crabs, for which the waters of Hampton Roads are so celebrated. The goods are packed in cans containing two dozen crabs, each one filled with two pounds of crab meat. On any can will be found full directions how to prepare Crab Salad and Deviled Crabs.—Invalids accustoming which it is superfluous to say anything to the public, who have eaten them ; and to those who have the pleasure yet in store, the recipes will be an invitation to a new and all surprising delight of the palate. The meat of the crabs is, beyond a peradventure, the most delicate and delicious of all seafood, far exceeding in fineness of flavor and of grain, lobster, salmon, etc. The extreme delicacy of the crab causes it to deteriorate very rapidly, after it is taken from its native element, and it is absolutely certain that consumers will obtain far fresher meats in these cans, than if they bought the crabs at the markets, even of our sea-board cities. By the process employed, a very few minutes elapse from the time the crab is swimming in the water, on which the Merrimac and Monitor fought, until its delicate flesh is hermetically sealed, and ready for use. The only condiment used in their preparation is a little salt, and anyone can prepare them as they like. They may be eaten directly from the can, or with vinegar and pepper, or they may be stewed, fried, or baked, as fancy dictates. For pic-nics, lunches, excursions, surprise parties, etc., nothing can take their place. A great deal of patient skill has to be used in picking the crabs, and it may be a surprise to some to know that every case contains the meat of about twenty dozen crabs ! In spite of the amount of labor and material used, I have determined not to offer them at the low rate of $5 00 a case, net cash. Money may be remitted by Post Office order, registered letters, or through the mails at senders risk. If desired, I will ship the cases to any address, subject to sight draft with Bill of Lading attached. To parties wishing less than a case, I will send any number of cans by Express, C. O. D. at the rate of $1.00 per dozen. All telegrams should be addressed, via Old Point Comfort, and all letters, to
